Time to go "back to sleep" for another 10 years or so, sorry.
Current systems are _far_ too slow to permit use as a viable internet
connection. On VHF 9600 baud is considered fast, and 2400 is it on HF.
Unless your idea of "high speed access" is based on early 1980s modems
(and unless you are satisfied with text based communications using
packet communications techniques) you won't find ham radio
particularly well suited for your use.

On the other hand, ham _does_ integrate well with computers
now. Given the current generation of hardware/software a good rig and
an Internet connected computer can give you such features as complete
computer control of your rig, automatic logging (and on-line log
lookup), sound card transmission/reception of cw, rtty, sstv, fax,
etc., dx-packet information, email via packet bbs, and a _lot_ more
besides. Your best bet for Internet access is a T1, a cable modem or
an isdn line--the solid physical connection (particularly with fiber
optic connections); ham radio will (by the very nature of propagation)
never be able to equal hardwired speeds or features.

Hope it helps,

73, Rick (ke8hh)

Ok, so now your going to be one or the other with this new structuring on the ham bands. You'll either be a real old, ugly and real fast cw operator, (cause that's the way it used to be to get a ticket), or, your going to be a young handsom or pretty,(yl) that is kind of slow at operating cw. Big deal ! You can always ger faster if you find out that you dig cw. I'de rather be the latter. Anyway, I couldn't care less what you are. I'm an old handsom ham that can do cw at a high rate of speed. Big deal, huh? Welcome aboard. w9Sox

Actually I agree with most of what you said. However it does not need
to be banned. A lot of folks still us and enjoy it. I see no reason
in making it a "filter" to getting a HF license.

And if you bothered to read any of my posts on this subject you would
have known I would not flame you on those statements. Its the rest of
your statements that I find stupid. And you know what they say....Ya
just cain't fix stupid.

Poor brainless Brian. Trys harder like Avis, but never quite succeeds. Insists he the GUISEPPI from Pinnochio, pulling the strings. Wouldn't take the hint to do a little research, so I guess I get the last and best smack upside his tiny brainstem

Try this Brain... Pinnocchio's father/maker was GEPPETTO not GUSIEPPI

All this time I thought he was playing at being this stupid. Guess I was wrong, he really isn't playing, he is this stupid.

Nice try though. Going through all this to insult someone and not even getting it right.

Oh well. Seems Dave is on 6 meters, below 50.2 and all I hear are NoCode JA's trying to work him from F-Land. Here Brian out there screaming his last 2 on 10 to a W6 Beacon...wow, can't get any better than this

Oh yes, in the file, additionally are

Vince and mf luder. All perfect companions to one who hasn't got things quite right. Look for GUISEPPE Burke coming to a Bellevue near you

all for now. back to the dx already in progress

If (and, in my opinion, that's a big if) amateur radio dies in the future, it's cause will not be the restructuring, incentive licensing, or anything of that sort, it will simply be the people.

I've been around the block a time or two, in several different venues, and have as of yet to see a hobby (or a career for that matter) where the old timers were more hateful towards newcomers, simply because they didn't do it "their" way.

Folks, your way, my way, anyone's way isn't always the RIGHT way! And, just because someone didn't follow YOUR path to success, doesn't mean their path wasn't just as meaningful for them.

Many of these newcomers have knowledge that many of US (yes, I'm including myself) oldtimers don't have, and may never have. The president of our local club is (well, was) a no code tech, and could run circles around the majority of us general and above licensees as far as not only technical knowledge, but as far as operating procedure. He has also been a master at publicity for the club, and has brought our club into the attention of our county, city, and state goverments like we've never seen.....even though he was a no code tech. His efforts have taken a club that was dying and revived new life into it.

My message for the new upgraders.....WELCOME!! (from most of us, anyway) I personally, and most of my friends, will give you any and all help we can. Just remember, this hobby is what YOU make it!!!

And, to the oldtimers, the same advice applies. The hobby is what you make it. Make it a miserable hobby, you'll have a miserable time. Make it a great hobby, you'll have a great time!!

Well said, Rick. I hope the re-structured newcomers bring some good talents and skills to the table.

In order for ham radio to survive and grow, we somehow need new technologies applied. The "rig of the month club" being offered by YaeComWood has not provided the impetus toward growth and improvement. So we have the same groups hanging out on the same frequencies talking about the same topics. For years.

As far as the "newcomers" .. does anyone remember the mid to late seventies, when the bulk of the newcomers were .. God forbid .. CB-ers?

Ok so they passed the 13 word test. But they brought us their "slang", etc. And all of it seems to have mellowed out over the years, and it wasn't the end of the world.

So it will be with the new-newcomers. Give it time, and they will blend in. And I doubt that the code - or lack thereof - will be a hindrance to their skills as operators, conversationalists, or bench technicians.

I wouldn't call DJ Smith a supremacist, but the rest of your description fits. And he has been at it for years. I first discovered him while living in SC back in 1987. That was the year Smith had the Masons and Shriners over-throwing the US government.

Well, 13 years have come and gone. And the White House is still safely in the hands of the Felon in Chief. And the Shriners are still having parties. And the Masons are still having barbecue suppers.

Come to think of it, maybe we'd be better off if the Shriners *had* taken over already. We wouldn't have Komrade Klinton's escapades to go in our history books. And I doubt that the Shriners would have burned the babies at Waco.

This sounds promising .. someone call the Shriners .. we have a suggestion ! ! !

Yes you will have to returne when changing bands and should touch up the
tuning when changing the frequency very much within a band.

Hi Ed...
Anything that humans do is subject to their own conceptions of
difficulty and their own conceptions of acheviement. The motivation of
any human to do more than required (especially for advancement in a non-
profit hobby) can only be driven by self pride. We build up pictures
in our minds over the years based on the walls and barriers that we
feel are worthy of climbing or eliminating by our own toil, efforts and
sacrifices. Anyone who participates in a complex hobby must sacrifice
TIME. Spare time (if there is any) can be spent in many enjoyable ways.
It is our own choice to make for ourselves. We may give up either
because it is too difficult or because it is TOO EASY for us.

WE must ask the question..."WHAT SHOULD THE REQUIREMENTS BE?"...
What should they be to keep the most avid Hams active and valuable and
capable of meeting not just "the requirements" but the basis and
purpose of the hobby. "The requirements" should be easy for the tyro
but very difficult for the expert. We can ill afford to frustrate
either the beginner by diffioculty or the guru by over-simplification.

When "the requirements" change there can be a big let down not only for
those who feel that they had worked harder in the past but for those
who feel ashamed of what is happening in the present. The pride of
achievement is lost because a big part of the challenge is gone. This
can lead to having many of the most accomplished Hams leave the hobby
out of utter disgust simply because it is no longer the hobby that they
once conceived it to be.

We can not blame those who will be taking advantage of the new
simplified requirements. We can only blame those who proposed and
encouraged "the requirements". Perhaps the Morse code war was

uppermost in their minds and they forgot about the perpetuation of the technical dumbing down. It is a sad shame. (:-(

Hams need MORE license classes and more walls to climb...not just this three step simplification!

73,
Bob Wex w2ilp (Insure License Potential)

>>prepare for one's exam.

>Show me the statement in the Y2K ARRL license manual where the Handbook is to
>be avoided.

Does the 2000 LM mention the Handbook? My '91 Extra LM makes no mention
of it; the only outside reference mentioned is the FCC Rule Book and
code tapes.

His claim was that the material was much easier in 1963. You can get
an idea of the body of knowledge an amateur could know by perusing
the '63 Handbook; the material was *not* "much easier" then. The 16-
page LM was to be supplemented with the 400+ page Handbook. Today's
LM is self-contained.

Also, an error everyone is making is basing the ease of yesteryears'
exams on the knowledge they've acquired the past 40 years.

I heard a glimpse of the test in Charleston, SC, this morning. It was
a Farnsworth scheme, here. It is actually up to the individual VEs.
The code sounded like 13wpm spaced to 5. Only ONE young boy was
taking the test, today. The rest of the THRONG was upgrading, mostly
from tests given since Jan 1, 2K.

Heck, might as well stick my 2watts in:
<shrug> so you're giving up your VE badge--guess what? I'm going to
get mine, and yes, I got an extra under the (omigosh) *new* rules.
Heaven forbid we *ever* change anything--why, we could still be using
horses to get around!

The new rules? Don't really care one way or the other--might just
have taken a few months longer to get my Extra, yet ppl with that
attitude, seem to want to scorn me as "not really an Extra"--wait
until I fire 30wpm CW at you by the end of the summer. Sure, and
some of you could fire it back too :) But I bet some "real" Extras
might not :)

And I've gotten one person already licensed (KC&#65533;HLL), and am working
with two others, and they will have a license by midsummer with luck.
I'm going to go to the school here at some point and time, and try
to get a club going there, as hams in Grinnell, IA are few (3 active,
for the most part, 2 PT). I'm going to try and get involved with the
weather net in Johnson IA. Isn't this what being a "real" amateur is
about? Furthing the hobby? Generating good will with the public?
Putting forth that "Extra" effort? Why hold so much animosity?
Before you turn your license in, why don't you listen for me on 10m?
See waht kind of op I am?

Want to know what the value of my license is to me? It took me 10
years, before I got licensed--CW held me back for years, and then the
internet distracted me (and a couple hundred thousand others who
might have gone into the hobby). But I perservered, and passed my 5
wpm--and immeadiately started working on 23 & 30 wpm.

Would there have been another ham, had I not gotten a license, to
call on a repeater for an ambulance and a tow truck for the couple
who had an accident on I-35 when I was travelling to Kansas City a
few weeks ago? No one else was stopping to help, even though the
mini-van was in a ditch, and obviously damaged beyond repair. <sigh>
The new rules, are the rules, whether we like them or not--adapting
to them is what requires character, not a fast code speed.

In so many words, yes. During the early international radio conferences, ARRL reps were always invited to be members of the U.S. delegation. (ARRL officers had served in high-level military communication positions during WWI, and the League had successfully mobilized 4000 hams to serve as military radio operators and instructors, so the League was held in VERY high regard by our government.) Of those countries attending the conferences, none, except the U.S., wanted amateur radio -- none wanted their citizens to have access to the air waves. As I said above, you can read all about it in DeSoto's book. You can read how the U.S. delegation was able to wheel and deal in order to get worldwide frequencies set aside for citizens to use.

I've always thought that radio history should be required reading in order to get a license.

>>>Of course you would,that didn't even have to be posted!I never would
have expected anything else..

Probably also:

Some questions about the history of the development of autos should be
included on the test for a drivers liscense.:
"In what year was the first Cadillac introduced?"

Before you get your high school diploma,you should be tested on the
history of the school:
"What year was the gymansium added?"

When you go get a building permit for your home remodeling,you should
have to take a test on the history of bricks and mortar:
"Where was the first known building made of clay bricks found?"

Do you understand Jeff?

Hello, I am new to HF and looking for a dipole antenna. I have heard of several different types (G5RV, Double Bazooka, etc), but have no idea which is better than the other. My rig operates 10, 15, 20, 40, and 80 meters, SSB and CW. I want an antenna for all 5 bands. I am looking to spend no more than $100, as I still need a tuner. Any information on this would be greatly appreciated.

Nor was it in the early 50s when I passed the general exam at 14. I
also did not own a Handbook in 1951/52. I learned virtually everything
I know about ham radio *after* I passed the general exam (thus obtaining
all ham frequency privileges) and, 49 years later, I'm still learning.

What the heck is wrong with that?

Why buy when you can build?

1. Instal a 120 foot horizontal wire. Feed in center with 450 ohm ladder line. Or 300 ohm TV wire,if using only low power. Buy/build a tuner that works on balanced line. All bands, no sweat. Cheap.

2. Build a "fan dipole". Make 3 seperate dipoles, for 75/40/20 meters. Feed with standard 50 ohm coax. Spread the three elements apart and work without a tuner by adjusting the various lengths. This antenna will work on 75,40,20 as a fundamental 1/2 wave antenna. And on 15 and 10 as a harmonic antenna.

1547. Thoughts on restructuring

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-17 00:00:00 UTC
From: pogopossum@my-deja.com
Message-ID: <8dfjvu$6i7$1@nnrp1.deja.com>
Source record: 113787

One problem we are having with all of these discussions is that we are confusing two different points of view, the FCC's view of the ARS as a "service," and our view of the ARS as a "hobby," or, for some of us, an elite club.

The FCC licenses operators and stations in the Amateur Radio Service to meet THEIR needs, not ours. The requirement for CW was never to make ham radio a closed society for a small elite, but to encourage licensees to develop the skills that the government wanted promoted for emergencies and times of war.

Remember the three reasons that the FCC licenses hams:
1. To recognize the value of emergency communications
2. To advance the radio art
3. To improve communication and technical skills

The only reason that CW was so important to the FCC in years gone by was because it was arguably the best, sometimes the only, dependable way to get emergency communications through in bad conditions or with minimum of power. The narrow bandwidth needed to punch through a signal and the ability to comprehend CW in noisy conditions made CW indispensible. This is not true anymore, however. In recent years, digital and satellite communication modes have replaced CW as the chosen emergency technologies in just about every commercial and military radio service. Therefore the FCC has no more need to maintain a pool of skilled CW operators. The FCC acknowledges this truth by dropping CW requirements. They would have even dispensed with the 5wpm requirement for the new General and Extra if international treaty didn't require CW proficiency for operating in the HF bands. I expect even that to go away in the next year or two. From the 'service' point of view, CW has lost its place.

There are many of us in the "hobby" of amateur radio who see CW in a different light. For many, CW is a tie to the traditions of our predecessors, a fun way to operate (kind of like becoming a skilled horseman in this age of cars), a badge of accomplishment, and an emblem of hard work and dedication to the hobby. Many of these people have real qualms about removing the requirement, sensing that something important is in danger of being lost.

There are others, however, who have a less-than-healthy attitude about this issue. For some, perhaps with less-than-optimal ego strength, the license and the status it confers, is a very big part of their identity. It is important to them to feel that they are part of an elite. Like the characters in the Wizard Of Oz, who needed the external confirmation of a diploma to feel smart, a medal to feel

brave, or a heart to feel loving, the magic talismans of the General, Advanced, and Amateur Extra licenses reassure them that they are, indeed, superior people. Unlike someone with a healthy and secure self-identity, they are terribly threatened when the only assurance of their superiority is "diluted" by changing or "lowering" the requirements. The biggest complaint they make is their fear that inferior people will suddenly be admitted to their private club and somehow pollute it - and their only form of self-validation.

Rest assured, even after Restructuring, developing 20wpm or better is still a wonderful accomplishment. It will still be respected and it will still be just as much fun to operate. You can always go down to the CW portions of the bands, safely away from the 5wpm'ers (who will mostly be operating phone, anyway) and hang out with the other hams who appreciate the value of CW skills. And if you hear a new "welfare" licensed General or Extra down in CW land working to improve his or her halting code speed, jump in and help with patience and kindness - at least they are going in the right direction.

BTW, I'm in my second incarnation as a Ham. I just got relicensed last month after a 20-year layoff -- Yes, I'm now a 'welfare' General as I didn't get my speed quite back up to 13 before time ran out on the old regs (though I'm still targeting 20wpm just for personal satisfaction). When I originally passed 13wpm 30 years ago, I had to actually copy accurately (no silly multiple-choice questions) and send cleanly - with a straight key, no less - to pass that puppy.

Amusingly, my old Elmer liked to complain that the appliance-operator Extras of recent years with their fill-in-the-blanks or multiple-choice code tests without even having to send at all (let alone sending with a real Navy straight key instead of these namby-pamby electronic dual-paddle iambic B mode keyers) aren't Real Hams, anyway <g>.

n0vfp@aol.comnospam (Brother Lloyd) wrote:

> LRod's problem is that he likes to intervene in every NG!

See here's where your difficulty is, here's why you are so overmatched,
and here's why you should try to find a way to quietly slip off the
internet and save yourself further embarrassment:

I have only posted in 5 newsgroups; r.r.a.m., alt.tv.nypd-blue,
rec.woodworking, rec.food.equipment, and alt.fan.john.mackey. Ever.

Now Deja news shows another dozen or so posts, but as it says on the
deja page, "numbers may be slightly skewed by cross-postings." I have
never intentionally posted to more than one newsgroup and I always try
to edit the "forum" field when replying to keep from crossposting. Some
messages get crossposted anyway.

Since you have so much time on your hands, you will find by going to the
posts of mine that show as being posted to:
rec.radio.amateur.policy,
rec.radio.swap,
rec.radio.shortwave,
rec.radio.amateur.boatanchors,
rec.radio.amateur.antenna,
alt.radio.family,
alt.radio.scanner,
alt.radio.parg,
rec.radio.amateur.equipment,
alt.discrimination,
alt.ham-radio.hf,
rec.radio.amateur.dx,
that they all are messages that appear in r.r.a.m., and thus are
crossposts.

With the possible exception of the two scanner groups, I have never even
been to any of the listed newsgroups. In fact, I couldn't even name 5
newsgroups other than the ones I've mentioned that I've been to.

So, your statement that "he likes to intervene in every NG!" in addition
to being absurd on its face, is quite simply a lie.

Your track record so far includes spamming with off topic material
plagiarized from discredited, lunatic fringe, hand wringers; hailing the
idiots of the newsgroup; "predicting" the outcome of events 100%
unsuccessfully; trolling for sympathy; attacking other users with
insults that you know not to be true, proving the value of your "college

education" with virtually every illiterate post; well, the list is impressive.

It's all there in Deja; take a look. You don't fare well in the comparison.

By the way, look up "intervene" and "interject." You might learn something.

Now, shall we discuss your hyprocisy in criticising my commentary while feeling no compunction about providing your own?

>AF2Y

What the FCC did was to recognize that the code test had
outlived its usefulness and are is no more needed than are
lamplighters in our cities.

It's too bad that those who feel cw is the _only_ test worth
considering don't have enough vision (or interest in ham radio) to
recognize that what was once a needed skill has now been replaced by
more modern technology and reduced to having value to special interest
groups only. If you--and the other old-timers who can't seem to let go
of your fixation on code testing--would spend 1/2 as much time helping
new hams to learn about the hobby as you do knocking them and
pretending you are better than them because you have an outdated
skill, you might actually contribute something to the hobby instead of
driving away new hams with your insults and offensive comments.

You--and others--fought to keep your outdated tests--and you
lost. Learn to be a graceful loser and get over it!

There is a problem with this kind of antenna now that the signal level regulations are going into effect. If you believe what is included in the ARRL web pages, open wire feeds can result in electromagnetic field levels which exceed the allowed levels that all hams are supposed to verify they've met, starting this year on all license renewal applications and on all license change applications. Somewhere on the ARRL web pages, you are told not to use open wire transmission lines any more.

Yet more government regulation about a topic no one has any hard scientific evidence about ...

: 2. Build a "fan dipole". Make 3 seperate dipoles, for 75/40/20

Number two is apparently the better choice. Susan won't irradiate her neighbor's kids too much when she's on the air and the EPA will be happy. :-\

Good point about the rf coming off of the ladder line. I did a run
with the on-line calculator with my station. My antenna's are about 25
foot over my head. (yeah I know). And with 800 watts the formula's say
Im ok.

The ladder line is still a good option. Perhaps placing the 4 to 1
balun outside, then run coax into the ATU would keep the "rf out of

everything".

And the coax deal should also be ammended based on the "rf polution theory"...hi. Put a 1 to 1 balun on it at the feed point. That should keep the "skin effect" radiation to a minimum. Right?

>will do so anyway, not accepting your unilateral ruling. The same person
>who could memorize all 1000+ questions today could have memorized all 16
>pages in 1963.

I don't have a 1963 manual (yet), but let me throw the words of your own organization (ARRL) at you from my 1949 license manual. After reading this, contemplate what you think your organization would have said about today's tests as viewed in 1949...

"The questions and answers in this booklet are designed to give you all the knowledge you need to answer correctly the actual examination questions. But it should be emphasized that the questions we list here are not the actual questions in the license examination, nor do they correspond question for question to similar examination items. What they are, however, are carefully prepared items designed to insure that you have the necessary knowledge to cope with the actual test queries."
[skip some]
"There may be several questions in the exact exam revolving around one simple discussion in this manual, but when you understand the subject you can readily check off the answers to any number of questions on it."

BTW, in the amateur radio regulations portion of the 1949 license manual, there are no questions or answers at all. They simply reprint 11 pages of excerpts from the Communications Act of 1934, leaving you to study and learn them. Refreshing...

>in the 1990s, the 1980s, the 1970s, the 1960s or the 1950s really knew the
>material they were tested for?

Ed, Is it possible to discuss *today's faulty exam* without bringing up the past? And without people thinking that I'm somehow putting down the applicants who take our modern tests when I say the *tests* are defective? Do you agree that a written test should be designed so that the applicants passing it know most of the material it tests for? If you do then you must agree that the modern ham test certainly flunks this criteria...

>Are you really offering that
>it is easier to rote memorize the Ohm's law questions...

No. But it is easier to memorize the majority of the test than to learn it. If a person really knows the material tested for in getting the Extra Class License, he should be employable as an electronics technician. (In the 50s and 60s an Extra or 1st Phone often got you in the door.) How is it possible to pass the test after one weeks worth of study (or less), when it takes a trade school a year or more to get a person to that level...

with it?

Ask Kim. She and many others I know use ham radio for communications alone. In recent years I have been exclusively a CW ragchewer. I have a bought key, rig and antenna. I haven't done any real electronics in years. I am a communicator. Different strokes Ed...

> why are they choosing ham radio over CB, FRS and...

Because ham radio for all its warts, still is a great place to be, and offers the social benefits of meeting other friendly people.

>[why are they choosing ham radio over] the Internet?

Many aren't. This is where the youth are. This is where I would have been if there had been an Internet in the 50s...

They also said, "If our answers sometimes seem to the initiated to be
naive or incomplete, rest assured that they are sufficient for the
purpose. ... In other words, the purpose of this manual is ... to
equip him with the knowledge he must have to pass the examination."

That seems pretty clear. All one needs to know to pass the exam is
in the ARRL License Manual.

As a matter of fact, they didn't, at least not in the '57 License
Manual. They stated in four different places that everything one needs
to know to pass the exam is in the License Manual. The very last sentence
suggests studying the Handbook, but they certainly imply it is not necessary.
And I am living proof that it wasn't necessary. The Handbook later cost me
seven hours of wages. The license manual only cost one.

Greetings!

Do you want a free download of any of these, don't get smart,
they are not kept on our web server!
But if you are a confirmed rip off artist like most radio
amateurs, go to http://www.laughingpoliceman.com then select
FREE STUFF and you will see the site as the first link.
Sorry to send you round the houses, but we just want to log up
more visitors!
These are all real, full retail versions, may I suggest you get
Go!Zilla before trying anything over 1Mb as this will let you
resume downloads.
Have fun, and any feedback from this service to our readers is
welcomed, email me from the link at the bottom of every page of
our club web site!

66fines,

Absolutely correct. The First Amendment and Part 97, in fact, do not confine our speech. A ham for nearly 50 years, I've talked everything on ham radio from sex and law to politics and Watergate to Star Wars, etc.

Understand, Riley is doing what Abe Lincoln did during the Civil War, when he temporarily shelved the Constitution. Both erred in favor of winning the conflict. In our case, our hobby//service and frequencies are at stake.

Thus, Riley's doing a high wire act. If he allows disputes, degradation is ordained. If he doesn't, he is arguably supported by exercising his regulatory authority. Then, if someone wants to prove they've been deprived of Constitutional rights, they can do so. If and when they succeed, the need for this kind of policing might have passed.

The inbred PitbullBOY has been hiding and running his mouth. Batting average ..0.
He said he was going to post my credit history, no show on that. He said he was going to pay me a visit, no show, nada, nothing. He plays childish games in the mail and has been reported to law enforcement. He pretends that he would make himself known to me at Dayton...with his given track record, the cowardly blowhard would follow his inate pussy ways and be nowhere to be seen.

"Ich bin ein Berliner" does literally translate to that, but that was
not the intent.
Kennedy was trying to convey that he understood what was going on in
Berlin politically at that time, and that he felt like he too, was a
citizen of that fine city.

While Rick and others are correct in that the FCC recognized "that the code test had outlived its usefulness", what those of Rick's ilk fail to also acknowledge is that the FCC, at the same time, made the written exams less rigorous. Therefore, the overall effect was to lower the standards of not just entry, but also advancement.

While I cannot argue that lowering entry standards had some merit, why then was it also necessary to remove all of the challenge? At one time, the Extra license carried NO ADDITIONAL privileges. It was simply for "bragging rights" as some call it. What was so wrong with that? Those of you who wish to take a simple exam and "chatter" have been accommodated at the expense of those who seek challenges. The FCC could easily have accommodated the "chatterers" without injuring those who seek challenges in life. Unfortunately, those who seek so called "bragging rights" will find other outlets for their energies. Perhaps that's what Rick wants, and if so, so be it.

Or, so it seems to me.

Rog.

>to pass the test after one weeks worth of study (or less), when it takes a
>trade school a year or more to get a person to that level...

The analogy doesn't fit anymore. Being employable in
electronics today requires FAR more knowledge than
40 years ago. Remember, the most complex electronics
most people had to deal with were TVs then. The typical
home radio was a basic 5 tube AC/DC set. The stuff
was trivially simple. Indeed, most repairs involved the
easy identification of a bad tube or a burnt resistor
which was often spotted by visible inspection.

Most of those "entry" type tech jobs did use and only
need the simple knowledge and skills (soldering)
that many hams had or learned back then. That
just ain't so anymore. Actually, I could argue that
the frnt line repairs today require LESS knowledge
because the repairable stuff has self diagnostics that
pinpoints the bad circuit pack, etc. Most anything
else that sells for under $300 is considered not
worth repairing because it is better to buy new.

Cheers,
Bill K2UNK

OK, in light of the recent CW/No code and restructuring debate, I'm looking for some facts......not opinions, but facts.

Can anyone show a logical, factual correlation between either the speed of CW, or even learning CW, and the quality of Amateur Radio Operators?

Again, I'm not looking for opinion. I'm looking for facts that can be backed up with solid, concrete, scientific, evidence.

Thanks,
Rick N9GSU

I suppose we could approach this from another angle.

Aaron's theorem of the modern faulty ham test:

1. If Cecil and Ed (and the rest) were able to pass the test in
the 50s and 60s, without knowing the material...

2. And we agree that any test that allows applicants to pass without
knowing the material is faulty (or broken)...

3. Then the 50s and 60s ham tests were in fact broken...

4. And Ed says if the test is broke now, it was broke then...

5. We can logically say that the modern ham test is in fact *broken*...

Well now, I've been trying to point that out to several on the newsgroup. I agree things were much simpler in the 50s, both in industry and the hobby. But as many have also pointed out, the current Extra test is much harder technically than the Extra test of the 50s, so things should balance out.

How long would you estimate it would take for a layperson to really *learn* the electronics to pass the Extra? A week or a year? I rest my case...

My 1949 ARRL license manual does indeed have that quote.

>In other words, the purpose of this manual is ... to
>equip him with the knowledge he must have to pass the examination."

Not exactly. There is more. Here is the paragraph directly
below your quote (in my manual):

"In other words, the purpose of this manual is not to give the student the actual questions he will meet but to equip him with the knowledge he must have to pass the examination. In order to familiarize himself with the underlying principles, we also suggest a study of The Radio Amateur's Handbook, particularly those chapters dealing with elementary electrical and radio principles, basic transmitter, radio-frequency, audio-frequency and power-supply circuits, frequency measuring and monitoring equipment, and radio-telephony."

In other words, ARRL didn't give you the exact questions (or answers). I imagine most hams at the time at ARRL (and in the general population) would have thought to give the exact questions and answers would be unthinkable. ARRL leaves little doubt that their philosophy at the time was to *learn* the material to pass the test...

>[Ham radio is] Friendly? Pleease!
>After reading the crap in this newsgroup?

I was talking about the *real* ham radio, where you go on the air. There are some trouble spots but I stand by my opinion that 99% of the over the air contacts are cordial and friendly. And that is probably as good or better than any other hobby where you meet complete strangers on a regular basis...

I have not figured out why many Usenet hams resort to name calling, abuse and threats. Of all the Usenet groups I frequent, these are the worst by far. However some weird people like me enjoy the place. Go figure.

So take advantage of the new regulations, get a ham ticket, and enjoy real ham radio...

That certainly depends upon what you mean by "exact". The
questions were, of course, not word-for-word but all the
exact key words were there and the answers to the questions
were *exact*. What good would non-exact answers be? The point
is that the ARRL only *suggested* that the Handbook be used
as a reference and only in the last sentence after stating
that all one needed to know was contained in the license
manual. Additional references were NOT needed to pass the
exam. If the system is broke today, it was broke when I
took my first exam in 1951.

W6RCecilA wrote
>So where's the harm? If it's always been
>broke, does it even need fixin'?

No harm. Just a dishonest evaluation of the test. I'm simply trying to get hams here to admit that the current test is a sham. If the layman can pass the test by memorization alone after studying for a weekend, he simply does not know the material. It does nothing to show the qualification of the applicant in the subjects tested.

Everybody always seems to want to compare the test to the past, or to give reasons why it can't be fixed. But those are separate subjects. The simple fact is that this is supposed to be a technical hobby, but the test we give to determine those qualifications is a pretend test. We all know people that have passed the Extra and know little about electronics. It's our dirty little secret that nobody wants to admit or talk about it...our joke of a ham technical (snicker) test...

First off, if your new to the hobby, welcome!

What's going to happen is what's going to happen, and
opinions are just that. Unfortunately, some folks feel
they must be childishly adamant if you don't think just
like them,and join in their narrowmindedness.

When the consumer VCR hit the market, the movie industry
went ape-sh*t. Whooped and hollered about how this was the
death knell to the motion picture industry.

NOT! Both the movie and VCR industry are both bigger than
imagined. Consumers benefitted by the competition and most
movie houses are nicer than ever. Look at past history, and
you will find unnecessary hysteria over many things that brought
change.

HAM radio is dynamic. Blind rigidity can lead to demise.
CW is passe in today's world, but that is not to say it is
worthless, and it should be kept alive. Any basic tool that is
beautifully simplistic and highly functional should never be
discarded. This holds for CW, IMHO.

Since there is such an outcry for keeping CW alive, I don't
believe it will die off. But what the HAM community AS A WHOLE
needs to consider is that communications have undergone some
mindblowing changes in a very short time frame. Such effects will
affect the amateur service, and by lowering the code speed requirement,
the expectation is more minds will join the hobby.

What truly sucks here is that there is a consensus that these new
minds will all be low-class, uneducated welfare recipients. I doubt it,
and my words here are going on public record.

Funny thing is, all the doomsayers words are logged and archived the
same as mine here, and there won't be any way to recall them.

If I say I am a no-code, I get categorized very rapidly.
If I say I am anti-code, it is a magnitude worse.
If I say I am pro-code, I am just as one-sided as the two above.

Code, no-code, or CW-proficient, I avoid HF because I have better
expenditures of my time. Sure, go ahead, get all bent out of shape
over this statement, but remember while you're going ballistic over it,
YOU make HF what it is, not me. I don't use it.

I, for one, flat out REFUSE to spend time on CW because there is so much more to learn about that is more attractive to me. (that's the cue for all the closed-minded, "be just like me" types who just can't exist knowing that another human doesn't think and act JUST LIKE THEM, to belch forth with a dizzying barrage of futile, misguided hatred.)

It's amazing. Anyone in a newsgroup writes anything even remotely indifferent about CW, and they are hit with seemingly endless projectile vomiting by others, and some of those others spell and communicate like some retarded, six-year old bastard street kid.

CW to me (and there's a whole bunch of other HAMs who will fit this description) is a NOVELTY. Like restoring an old radio. Nothing to be looked DOWN on...rather it should be APPRECIATED. BUT, it is a diversion from current and emerging technologies that just so happen to catch my interest FIRST.

I welcome new, fresh insight into a somewhat stale realm. I bet the new minds are going to come up with some pretty innovative and very exciting ideas. Telecommunications and networking technologies are very adaptable to HAM radio, as well as very powerful. Conversely, HAM radio can be a testbed and proving ground for proof of concept for new methods, modes, and technologies.

Let the games begin, and if you've got nothing positive to add, then stay out of the way. The rest of us choose to enjoy and appreciate the opportunities we have, while were here to do so.

Laterz.

Goodness... This is a christian attitude?
I guess ham radio isn't the only thing that's changed.

Im looking to buy a mint or near mint condition 220mHz band transverter that will be fully functional with an Icom751a (if it needs an hf rig) or an Icom271 (if it needs a 2m radio). Anyone looking to sell one or any recommendations, info or suppliers is most certainly appreciated.

Thanks and 73

HAM RADIO IS HAM RADIO AND THE CODE (MY 9 YEAR OLD GRANDDAUGHTER HAS 10 WPM DOWN PAT) IS PART OF IT. ANYBODY CAN ORDER PIZZA ON 2 METERS AND I'VE HEARD IT DONE. SEEMS MOST PEOPLE HAVE 3 HOURS A DAY TO WASTE WATCHING "SITCOMS" AND STUPID COP PROGRAMS ON TV BUT FIND MORSE DIFICULT. PRIORITIES, OM! LOTS OF "EXTRAS" TODAY AREN'T NEARLY AS KNOWLEDGEABLE AS NOVICES OF YESTERDAY. IT'S BECOME NOTHING MORE THAN CB AND THOSE WHO SPEND THE MOST MONEY ON SOME OF THE CRAP OUT THERE FOR SALE (AMPLIFIERS, FOR INSTANCE) THINK THEY'RE IT. HAH!!!!!

WHAT IS SO IMPORTANT ABOUT BEING AN "EXTRA" ??? I'M A GENERAL AND I CAN EASILY GO 35/40 WPM. FOR A FEW EXTRA "PRIVLEDGES" I SAY EITHER LEARN TO SEND AT 30 OR STAY WHERE YOU ARE. BETTER YET GO TO A DRUGSTORE AND GET YOURSELF A CB. WON'T HAVE TO LEARN ANYTHING AND YOU CAN HAVE MORE TIME FOR THE BOOB TUBE. YOU HAVE TO WORK FOR WHAT YOU WANT!!!!! EARN IT OR GO WITHOUT IT. IT'S BECOMING A DAMN GHETTO OUT THERE!

Part of me has a slight negative about the human nature part of this restructuring. It seems as if a lot of the upgrades are completely ego driven. It is the motivation behind the upgrade that bothered me, where people didn't need the upgrade, aren't even going to use HF, but did it because they knew they could say they were an Extra and nobody would know the difference. Why else would many wait 10, 20 or more years, time during which they could have easily practiced the code, and now finally upgrade? All of our testing sessions were like a greedy stampede for free concert tickets.

People keep forgetting that the whole REASON the Extra class carried a certain status is because it was more difficult and few wanted to make the comittment to learn the code at that speed. It has no status now and is no different than a Tech Plus license. Perhaps we are moving towards just one, or maybe two license classes. That would make more sense to me now.

Of course, there are plenty of Extra Pluses who also upgraded just out of ego. They didn't need that little 25kc on each band, they wanted bragging rights. I guess I did too and felt like I worked hard for an award that provided a certain status and it was taken away. But I certainly wasn't bitter about it, and I can't see how some idiots are so rude to people who have taken advantage of something put before them. The more, the merrier in my opinion. Perhaps some of the new blood will bring an intelligence and class missing from much of the band now. If they take advantage of anything, I hope it is to actually USE HF and enjoy it.

So I welcome all new Extras and have been tuning the band to see if I hear any excited voices getting their first chance to talk beyond their local repeaters.

What a complete ass. I notice he spent the time to read your post and even reply to it just to whine. Since it is so hard to get people to follow the rule of ignoring trolls, who only do this sort of thing as long as we have an audience, I wonder if we can just compile a list of their names, call signs, and email addresses and post them in a monthly faq to make it easier for people to ignore them or filter their mail?

I was also wondering if there is a moderated list? If not, I think there would be a lot of people who would appreciate one and would move over there. Then we would just block these idiots.

Possibly all the above, by why is that necessarily bad for ham radio? We need to keep this hobby open, interesing, and available for public service. If we sell more radios, there will be more developments and cheaper prices. If we have more people in the hobby, we will have more people to talk to, some of which who are under the retirement age. We might also be able to drown out the noise from some of the really lunatic fringe and replace it with people who care about HAM radio.

Hi! I'd like to purchase one each of the following Azden radios:

PCS-7800 or PCS-7800H 10M Xcvr
PCS-7200 or PCS-7200H 220 MHz Xcvr
PCS-7300 or PCS-7300H 440 MHz Xcvr

The radios must be a cosmetic 8 or better, and 100% functional. They must be complete with manual, power cord, mic, and mounting bracket.

Please drop me a note with your offers.

Thanks,

Paul WD8DKY

Mr. Hollingsworth can take care of himself. I'm interested in the viability of the hobby/service he oversees while actually he's tangential to the issues at large and the reason I mentioned him in my posted inquiry was because there is no way that the tremendous influx into HF by jerks who couldn't make it any other way than by the welfare route will not create friction, arguments and the interference which he's worked to reduce. It will not happen overnight but still bet on it.

Fred,

That is why it was (is) called incentive licensing...hi. Folks are losing site of the fact that amateur radio is constantly changing. I've been at it 39 years and I have seen some MAJOR changes.

When I got my Extra it was because I wanted my frequencies back that were "stolen" in November of 68. That was when my General ticket lost over half of its value. Was I pissed? Sure was. But I got over it. Just like all these crabbing, moaning folks will.

Im also looking forward to the "new guys". Our challange is now to help them along, and allow them to join this fine fraternity with a minimum of hassle and pain.

Lumpy,
The majority of the HF invasion by the dopes will not be from CB since those jackasses are as happy as pigs in mud. I'm talking about the dingdongs who had to stay on UHF and VHF thanks to either laziness, stupidity or both. The REAL hams who are so liberal about GIVING away licenses are that way because they have not felt the impact. They will however be the first to howl when realization sets in and the bands become intolerable, insufferable and nearly unusable. Just wait.

Aaron Jones wrote:

>Ed, can you look at me with a straight face and say that everyone passing
>the Extra Class exam really knows the material he was tested for?

Of coures not, Aaron. But can you say that everyone who passed their tests in the 1990s, the 1980s, the 1970s, the 1960s or the 1950s really knew the material they were tested for? If it is "broken," it has been broken for a very very long time...

> Can you even say that you can't pass the test by memorization alone...

Can it be? Perhaps. I suppose that there are some who can rote memorize over 1,000 questions with no understanding. Are you really offering that it is easier to rote memorize the Ohm's law questions, to pick one example, (as in the answer to the 10-ohm question is 3 A) than it is to memorize one algebraic formula and apply grammar-school math?

I have taught the RF safety parts of a few local classes. Standing in front of the room, I got the sense that most of the class (not all of the class) really wanted to learn what I was teaching. Why would people want to get a ham license, except for the learning experience that goes with it? Those who want to a "communications" activity that comes with no requirements have several options to choose from -- why are they choosing ham radio over CB, FRS and the internet? Why do most hams studying for their tests buy real study guides, with text that explains why the right answers are the right answers, instead of just downloading the question pools and memorizing away? The same thing that drew you and me to ham radio is what is drawing most people today.

>(Please don't fall back on how it was in 1963. Let's discuss how it really
>is today.)

I don't blame you for wanting to discount any discussion of 1963. But I will do so anyway, not accepting your unilateral ruling. The same person who could memorize all 1000+ questions today could have memorized all 16 pages in 1963. There are more correct answers to the questions today than there were sentences in the 1963 study guide.

I did not own an Handbook in 1963. All of my studying was from the 16-pages of General Class license manual. I did a combination of real learning, memorization and sheer luck, recognizing the correct answers on the exam when I saw them.

If there was a "golden era" of ham radio when the FCC exams really proved that hams knew all the material covered by the scope of their exams, it was not in 1963.

It is the 12 year-old-mentality that prevails on the cb band. To find
the IQ of a cber, take their age, divide it in half and that is the
approximate IQ level. They really seem to like the one that makes a
farting noise when they unkey. Real class.

And the Commercial Exams of the period were courses in Radio-Archeology as well. Remember the ads in the Correspondence School section of every magazine "Earn your FCC license!" right next to the detective schools -- "It's a thrill bringing a crook to Justice". That was a rote-memorization exercise if there ever was one.

The hams used echo on their transmission years back so as to improve
intelligibility under marginal conditions---I guess too much echo is
detrimental. Kinda like Brillcreme---a little dab will do ya'

The beeps are used in commercial service, military and NGO so as to be
able to distinguish the end of a transmission to prevent doubling.

Well, as some of you might have gathered, I recently read [juveniles insert "Duh-huh, you can read ? Duh-huh Duh-huh HI HI" here] three great ARRL publications, which I made the mistake of buying outright.

DXing on the Edge, the Bore of 160 meters- 100 some odd over priced (small size) pages with a CD of Jeff Briggs playing DJ for the ages on an aluminum alloy wafer coated in plastic.

The best thing in it was the snapshot of K1ZM's multi million dollar "summer home" on a private island in Massachusetts. And that was ont the damned cover. I wonder if he'll stop off at ARRL in between and make some SSA Units ? I'm sure he needs the 800 bucks a month...

One word- BORING. It comes wrapped AND LET THAT BE YOUR FIRST WARNING. NEVER BUY A BOOK THAT'S WRAPPED UNLESS IT'S THE TORAH, KORAN OR BIBLE AND YOU KNOW WHAT'S IN IT ALREADY.

What university did this guy go to ? Was he never taught not to engage in endless chronolgy of his subject ? God help me to find even a shred of interpretation of the meaning of any of the events depicted, like the play-by-play of every jerk who ever got a 160 meter DXCC.

Although one must give W1BB credit for doing it with 100 watts. Maybe the 2000-era DX monkeys could learn from his mistakes... er... success.

K1ZM is nothing if not a self centered, egotistical author. Imagine the fine art of including yourself in the chapter on the most memorable contacts of "great" 160 m operators.

I'd think Marconi would like to call that. Or even Armstrong of Sarnoff. They'd be unbiased. Not an author writing of himself.

I wonder if K1ZM thinks a Phi Beta Kappa key is a Greek tool to send CW, since he appears to be not too much of this world...

Further, K1ZM's "sharing of the tips and techniques" of 160 success that ARRL trumpets is limited to some common sense knowledge about DXing in general you can find on contesting.com (I paid 28 bucks to read "Listen, Listen, Listen" ?). Oh yes, and four highly technical antenna desgins you won't find anywhere else: four square, inverted L, phased verticals and that technical monster- the ground plane or vertical.

As for his discussion of receive antennas, it was one big ass ad for ICE matching transformers (run by a comrade in arms of Zero Musing). Find better descriptions in US Army field manuals.. and for pennies on the dollar.

Don't waste your shelf space on this one guys and, well, more guys...

I get your point and agree with it. A majority of the minority is
uncouth.

But who makes your food and washes your sheets and crapper when you're
in the hospital ?

Make sure you carry a "No black blood" card with you when you wrap your
car around a tree talking on the 2 meter CB and need a couple of units
of ARC's finest vintage. Course, if you don't like them, you could
always go every 6 months and preserve your own for the rest of your
life, but drive carefully until then and don't forget or you might have
an O-C fit.

Better yet, who is hiding behind that kitchen wall in McDonald's...

You're right because the existence of a diety will never be proven. It's all faith and it's more important to have faith in oneself than in the unproven. Religion belongs in three places:
1. In a house of worship
2. In one's own being
3. On this board
Amen!

Not exactly, I would say the main purpose of a ham written exam should
be to ensure that the people passing the exam know what they *need to
know*. Before we can declare an exam faulty, we must ask ourselves,
do the test takers *need to know* the tested material? For instance,
I don't need to know the radiation pattern of two 1/4WL vertical
elements spaced 1/4WL apart and fed 90 degrees out of phase. If I
ever need to know that tidbit of knowledge, I know exactly where to
find the answer.

I will agree that the written exams have always been faulty in the
sense that nothing's perfect. Question is: Are they good enough?

What's so unusual about using amateur radio to talk back in time? Why, I monitored a QSO on 75 tonite in which none of the participants had had a new thought since approximately 1955. Talk about a time warp.

Thor,
your cjoices for a radio and antenna sound fine, given
your limitations.
As far as the license, there have been a few changes.
The classes are now Technician, General, and Extra. The
Novice, and Advanced are gone, and so is the 13 and 20 wpm
code tests. All code tests are now 5wpm. Couldn't be any
easier and still be called a test. Welcome back.

ke8hh has got the idea. Let me clarify what I meant by 'high speed' data.
I was talking about today, out of the box, 384 kbits/second, and in two
years, 200 mbits/second.

1200 baud, 2400 baud, no, no no.

Can it be done?

>I would say the main purpose of a ham written exam should
>be to ensure that the people passing the exam know what they *need to
>know*.

So when a ham exam is given to determine if an applicant is qualified to enter the hobby, the exam should only test for what the applicant "needs to know", not what he actually knows??

>Before we can declare an exam faulty, we must ask ourselves,
>do the test takers *need to know* the tested material?

If hams don't need to know advanced electronics to *enter* the hobby then why test for it? If they do need to know advanced electronics, why give a test that allows passing without learning it?

>I will agree that the written exams have always been faulty in the
>sense that nothing's perfect.

Well, at least I got you to use "exams" and "faulty" in the same sentence.

Why do you suppose the Bash books were considered cheating at the time? Hadn't the FCC heard of your "need to know" theory...

Chris,
I wouldn't worry about the 18v, which may seem high
to you. Remember, this is a nonregulated power supply,
the 'idle' voltage will be higher than 'normal'. The
voltage under load will be down around 13 volts give or
take a fraction or two. Normal behavior for Icom power
supplies.

Roger, if you read the whole post you would have "read" that the
antenna was using latter line (balanced). He could us a 4 ot 1
balun and then use the coax to his rig. The feed point in the
message was mentioned as 400 ohm latter line.

Source record: 113686

I have 2 ft-50r's for sale. The first one is in mint cond, 9 out of 10. It comes with
5 watt battery, antenna, manual, charger, and case. The case has been on the radio since it was new. I have only used this radio in my house for receive purposes only, very very low tx time. The second one I have used a great deal. It comes with 5 watt battery, pl-259/sma adapter and thats it. The radio does not
want to tx. I think the tx button went bad or ? It powers up fine. I will take $200
for both radios. I will not seperate package.
Thanks
Tony

> And on 15 and 10 as a harmonic antenna.

I've never had any success on 10 with this kind of arrangement. The reason is the same reason it works on 15. The harmonic relationship has to be odd. 15 is the 3rd harmonic of 40. But there is no band of which 10 is an odd harmonic.

Also, in order to make it work on 15, you must be careful where it's cut for 40. High phone will put it well out of the 15 m band.

I have found that there is some interaction between the wires, and that a LOT of cut-and-try is required before all the bands (and the transmitter) are happy.

The following article is the first installment of a new monthly column that will be appearing on http:www.adi-radio.com.

* * *

What's the FREQUENCY, Kenneth?
By Ken Collier, KO6UX

On April 28, 2000 something amazing is going to happen, something that could have a profound effect on the future of amateur radio in the USA for years to come.

No, it isn't license restructuring. By April 28th the dust will have begun to settle on the license restructuring issue, leaving behind a simplified amateur radio license structure and the largest flurry of license upgrades in history. As exciting as the new license structure is, it is overshadowed by the potential ramifications of April 28th. That's because on April 28th, ham radio goes to the movies.

The new movie Frequency is a sci-fi action thriller starring Dennis Quaid, Jim Caviezel, and ham radio. It opens in most U.S. cities on Friday April 28th. By now many of you have begun to see commercials and trailers for the film.

The movie, itself, features ham radio in no small way. The basic plot involves ham radio signals reaching across time, as is evidenced in this excerpt from the official movie web site (www.frequencymovie.com):

"What if you had the chance to travel back in time and change just one event in your life? For John Sullivan (Jim Caviezel), there is no question. He would undo the events of October 12, 1969, when the out-of-control Bruxton fire took the life of his father, a heroic firefighter (Dennis Quaid). Now John may get exactly what he wished for . . . and much more than he bargained for. One day before the anniversary of his father's death, in the midst of the spectacular sky storm known as the aurora borealis, John Sullivan discovers in the house he inherited his father's old ham radio and begins to play with it. Through the electrical static, he finds himself talking to a man who claims to be a firefighter and who appears to be awaiting the World Series of 1969. Is John really talking to his own living father on the very same day, in the very same house, but exactly three decades ago?"

As an amateur radio operator, it is exciting to see our hobby so prominently featured in a major studio movie like Frequency, and I see it as an incredible opportunity. Without a doubt, Frequency is the

single most important thing to happen to amateur radio since single side band supplanted AM as our mode of choice. Frequency offers us, as amateurs, a unique opportunity to do something that we, as a group, are normally bad at: promote the #@$& out of amateur radio.

I am convinced that if amateur radio is to survive as a viable institution through the 21st century, that we are going to have to get the word out about what it is that we do. Think about it! If city governments and housing associations really understood the long distance emergency communications capabilities of ham radio, would restrictive antenna ordinances and covenants still hamstring hams? Or would communities instead be encouraging hams to erect towers and antennas for emergency communications use?

The problem is that few people outside of amateur radio have an accurate picture of what hams do, of what we are all about. Many people don't even know that ham radio exists, equating hams with dreaded Citizens' Band radio operators. Restrictive antenna covenants and declining number of new amateurs are both the direct result of people not knowing about the great hobby and service of amateur radio.

So, think of Frequency as a chance to educate the world about the fun side and the serious side of amateur radio. Whatever you do, don't just let the movie go by: DO SOMETHING ABOUT IT. Now is the time for your club to organize. Approach the local theater owner about the possibility of having a club table outside the theater during opening weekend. Pass out brochures on amateur radio. Do a HF or satellite demonstration showing off the long-distance capabilities of amateur radio.

As hams, many of us think of the exciting elements of ham radio as being commonplace. The average person doesn't. You can instill a sense of magic and wonder in people by showing them how it is possible to talk around the world without any wires connecting you to the person with whom you are speaking!

We at PREMIER Communications feel so strongly about the positive effect of Frequency that we have joined with the American Radio Relay League and several other companies within the amateur radio industry. Together, we are co-sponsoring an award for the amateur radio club that does the most spectacular job of promoting amateur radio in conjunction with Frequency. The winning club will receive a donation of a sensational amount of amateur radio equipment, including an ADI AR-147+ 2-meter mobile. The exact details of the contest will be announced by the ARRL shortly.

So get out there and do something to promote amateur radio. If everyone does their part, the impact - like the movie - can reach across time, helping to mold a positive future for the greatest hobby in existence.

>and dedication. Those WERE measurable qualities........KZ5B
>
It didn't _instill_ anything. It may have _demonstrated_ a
commitment to learning code, but it didn't _inspire_ it.

In practice, the code study was, far from inspirational,
actually an _impediment_ to upgrading for many very serious hams. Some
simply didn't have the skills to easily master code while others
simply didn't see enough value in the few extra KHz available to an
Extra class licensee to devote their time to studying a mode they had
no interest in using.

What is needed is not forced mastery of a skill which does
nothing to impart any actual technical knowledge or operating
skills--what is needed is a tougher series of written tests, so that
the time spent studying for them _does_ produce some tangible results.
And it isn't the fault of the FCC that we don't have those--it's the
fault of the VECs who design the tests and arbitrarily use far smaller
data bases (perhaps so they can more conveniently publish
"memorize-me" training manuals???) than are optimum. Increase the
difficulty of the General and Extra tests (while keeping the Tech test
fairly basic to encourage new hams) and you'll do a _lot_ more good
for the hobby than any code test ever did.

Ok--there is a negative correlation between the class of
license and participation in both the Liberty Net (and the jamming
activities associated with it) and the "discussions" on 14.313. The
lower the license class, the less the likelihood that a ham will
participate in those forums (i.e., Novices and Technicians do not
participate there, while a higher than average percentage of Advanceds
and Extras do). Because license class was (until last Saturday)
positively correlated to CW speed, you could safely argue that the
higher an individual's maximum code speed (up to 20 WPM, as no way of
testing the hypothesis beyond this speed existed), the greater the
probability that the individual would participate in behaviors which
violated either the letter or spirit of the regulations, or both. :-)

>between the two.
>The comparison was made to high speed internet and he was just
>stating the speeds on both.
>That's the way I read it.

Actually, the 2400 was a typo--it should have been 1200, but
for some reason I typed 2400 instead (can't imagine being back at a
1200b speed, I guess). 1200 is the max on HF while 9600 is the max on
VHF (it's higher on the uhf & microwave bands, of course). My
apologies for the error.

You are correct, on the other hand, when you point out that my
intent was to compare Internet speeds to ARS speeds. While 9600 is as
fast as most hams operate on the air (with exceptions in the very high
frequencies), 56,000 is as _slow_ as most Internet users operate (some
may still use 28,800 but it's becoming less common), and many of us
operate a much higher speeds (i.e., my current connection is 768K--a
"bit" faster than HF :-).

It will be a long time before ham radio offers the networking
capabilities of the Internet--and by the time it does, the Internet
will have increased its own speed to the point that full screen real
time NTSC quality video conferencing (with multiple participants) will
be the communications norm (about 10M baud minimum)--a speed necessary
bandwidth limitations will prevent all but the highest frequency
operators (who are line-of-sight limited) to achieve.

While technically correct, it is misleading to say so, since 10 meters
is the only band where it is correct. Since the vast majority of digital
work is done on HF bands other than 10 it seems disingenuous to fail to
mention that the limit is 300 for all the rest of the HF bands.

>also advancement.

On the contrary, the FCC didn't make the written exams more
_or_ less rigorous. The FCC has no direct influence on the content of
the tests at all.

If you want someone to blame for the lowered standards, blame
the VECs who are unwilling to expand the question pools to a large
enough number of choices that memorization is impossible and to
increase the level of difficulty of the questions to a point that
would insure real subject competence on the part of the testee.
Whether you view this as a laziness on the part of the VECs, or as a
commercial decision among VECs who are also test prep publishers and
know they can't sell successfully books with more than a certain
number of questions in them (costs and pricing would quickly change
the sales figures) is irrelevant. That the VECs are _solely_
responsible for the degradation in difficulty, however, is not.

>While I cannot argue that lowering entry standards had some merit, why then was
>it also necessary to remove all of the challenge?

Unless you consider higher speed code to be the _only_
challenge (which, clearly, is unreasonably biased), that hasn't
happened. It's _still_ easier to become a Tech than a General or a
General than an Extra. Only the Advanced class was eliminated among
the higher levels, and given the very little difference in privileges
between Advanced and Extra, and the fact that 4A was _traditionally_
viewed as a much harder test than 4B anyway, that elimination made
perfect sense.

>At one time, the Extra
>license carried NO ADDITIONAL privileges. It was simply for "bragging rights"
>as some call it. What was so wrong with that?

Everything!

It isn't the role of the FCC -- OR of amateur radio -- to give
you "bragging rights." That's what awards are for (which is more
impressive, the ability to copy 20WPM CW or a five-band, qrp, dxcc?)
and those still exist intact.

The role of the FCC is to provide standards for each class of
license, and insure that those standards are met. If you want to brag,
work all dxcc countries between 28.3 and 28.5 using phone and
operating at 100mw or less--we'll be impressed, trust me. :-)

>Those of you who wish to take a
>simple exam and "chatter" have been accommodated at the expense of those who
>seek challenges.

Translation: Those who don't want to spend time learning a
mode they will never use and which is out-of-date technically, have
been accommodated at the expense of those whose only standard of
self-worth is their code speed.

>The FCC could easily have accommodated the "chatterers"
>without injuring those who seek challenges in life.

They did. The cw portions of the HF bands remain intact--they
didn't expand phone privileges, they just allowed more people to
become active in HF.

>Unfortunately, those who
>seek so called "bragging rights" will find other outlets for their energies.
>Perhaps that's what Rick wants, and if so, so be it.

Excuse me?

YOU are the one who claimed that you lost your 'bragging
rights.' Are you now stating that because you can't brag about having
had to learn 20 WPM code in order to become an Extra, you will no
longer participate in Ham radio? If _that's_ your attitude, it will
certainly be a small loss for anyone.

Becoming a ham isn't about lording it over others who haven't
studied the same things you have--it's about being part of a hobby
that offers opportunities to a fulfill a wide range of different
interests. Sorry that you can't see that.

Aaron Jones wrote:
> So why do we pretend we have a very technical test?

"We" don't do that, Aaron. I have been saying for years that the ham written exams have been easy ever since I took my first one in 1951 and they are still easy. They are entrance exams, not graduation certificates. No ham can truthfully say he/she is a "very technical" individual simply because he/she passed any ham exam that has ever existed. Very technical hams did not become very technical merely by passing a ham exam.

I scored 100% on my recent Extra exam, not because I am very technical but because the exam was relatively technically superficial. I am not parading myself as being very technical because I aced the Extra exam. IMO, people who do that just don't have a handle on the real world.

It seems to me that hams, as a group, have a rather low opinion of themselves as human beings, and need some ego boost that they can obtain from ham radio. If someone wants to believe he/she is very technical because they passed a ham exam, what's the harm? If someone wants to believe that he/she is a superior ham because he/she can do 40wpm in Morse code, what is the harm?

> I'm still waiting for you (and Ed) to admit that the current ham testing
> scheme is a sham.

"sham - a trick that deludes"

Don't know about you, Aaron, but I have never been deluded by the "current ham testing scheme" so I cannot agree that it is a sham. If you admit to being tricked and deluded, how can you turn around and present yourself as knowing the truth?

It appears to me the tests do exactly what they were designed to do and that is provide a minimum entry level requirement. I recently satisfied the minimum entry level requirement for Extra.

Seems the basic question you are asking is: Is there any room in amateur radio for non-engineers and non-scientists? I think the answer is yes, there is room for everyone who meets the requirements.

Basically correct. If one cuts a 75 meter to 3.901 and uses it on the
7th harmonic it will resonate at 27.300 plus the end effects caused by
the wire being used as a harmonic radiator. A good starting point
(fudge factor) is from 3 to 5%. Thus hopefully putting it around
28.119 to 28.665. This of course depends on many unknown factors, such
as height above ground (real and otherwise). Objects nearby, etc. etc.

A good amount of playing may indeed be needed. This makes it a useful
learning tool. Or hang it and hope, and use a tuner if you don't want
to get it right.

All multi-band wires are a bit of a compromise. Sometimes they work
and sometimes they don't. But it is a lot of fun trying and LEARNING.

Rick, you are a voice of reason and sanity crying out in a maelstrom of idiocy.

As someone in the Social Sciences, you are no doubt aware that two of the strongest motivations of human beings are to form themselves into groups or cliques and, having done that, to then keep out everybody else, while convincing themselves that membership in their own particular clique confers some sort of superiority over those they won't admit. If all you can do is run faster than the next guy, then running fast becomes the sole determinant of superiority.

There is nothing in the new restructuring that takes away any accomplishment from those who have earned it. If you are worried about the fact that an Extra ticket no longer automatically indicates 20-wpm code proficiency, and you really need the validation that comes from the admiration of your lessers so much, take one of the ARRL Code Proficiency tests and get a pretty certificate to hang on your wall. Or, better yet, just get on the CW bands and show your abilities to the world.

Hell, if they started giving away Extra tickets in corn flakes boxes, each of us should understand that we are still who we always were and our accomplishments are still what they always were. Changing the requirements does not break your bones, nor does it pick your pocket. The damage you suffer is primarily in your own minds. If your merit as a ham is not self-evident in your on-air professionalism, operating skill, and public demeanor (dare I say 'class?'), then no amount of wallpaper will confer superiority on you. In the real world nobody cares what you got on your entrance exam - only what you do once you're in the door.

Ken,
Do us all a favor, don't promote anything. That the
ARRL is pronoting it is bad enough.
Can't you just imagine the 'fall-out' from this movie?
Oh boy! Lots of 'new' people wanting into the hobby so
they too can 'dream' of doing courageous things! Thats
all we need. Then, when these 'new' people realize that
ham radio isn't exactly as depicted in the movie, maybe
after they've invested a few bucks in preparation and
equipment, can you imagine the nice, warm, 'fuzzy' "I've
been had" feeling they'll leave with? Thats all we need.
The people making movies probably know more about
how to promote them than we do. Why don't you let them
do it?
'Doc
PS - And no, thats not being pesimistic, it's being
realistic.

I purchased a horribly over-priced pair of in-ear (foam-like inserts)
'phones that I use at races (with my scanner). I have searched
unsuccessfully for several years to find a source, but they are excellent
for what you describe. I got them from the Frequency Fan Club - see
http://www.racescanners.com

These, along with one of those mission-control type mics (long skinny flex
tube, would be very suitable. I just have not found a source. Maybe
someone will read these and point us to a seller.

I can't correlate it with Amateur Radio Operators, but I can with military types. My knowledge of the Morse Code qualified me for an immediate 3 level (skipped radio school completely) in 1964 Air Force.

It also placed me into Ground Radio Operations where I saved a lot of American and ARVN lives when I was a Forward Air Controller radio operater in Nam. It also made me able to copy "enemy" cw transmissions and relay said info to Army S2. And it got me a nice cush TDY to Bangkok Thailand to play Morse intercept for a while.

And later in the Army it kept me from going back to Nam because Morse qualified O5C/H operaters were needed in Germany. I would say Morse code actually saved my life.

So I suppose it does make one a better Amateur Radio Operator. By making one more diversified and able to communicate under varied conditions.

Isn't that one of the reasons Amateur radio even exists?

Wolf, I think you missed the point here. CW mastery requires lots of sweat and time, but at the end, all you can do is send and receive dots and dashes faster. It doesn't teach you anything new about RF theory, radio wave propogation, antenna design, good operating practices, RF circuit design, FCC regulations, or any of the other subjects covered in the written tests.

It is a wonderful test of your dedication and determination, I grant you, but we could do that just as easily by making every prospective General and Extra train physically until he can run a up a steep hill a hundred times in a row loaded down with a pair of boat anchors. Actually, knowing the physiques common around the hamfests I go to, this might be a much more difficult hurdle than a mere 20-wpm <g>.

The other problem with code as a benchmark is that peoples' inborn ability to learn code would seem to vary wildly. Some find it relatively easy to learn and to quickly come up to significant speed, while others seem constitutionally unable to do it no matter how hard they try or how long they work at it. In the end, CW capability may be, like music capability, different in every person - something some people are literally born with. Some are potential prodigies - others are tone-deaf. In the end, book-learning may be far the fairer measure of a ham's abilities and determination.

Of course, if you are a lot better than most people at a single endeavor, it is human nature for you to embrace that endeavor as the one true measure of superiority <g>.

This might be another good thread. I can attest that there is more of a connection between music and CW than meets the eye. :)))

I'm a musician, have been nearly all my life. So, what is cw to me? Rhythm, plain and simple. Learing CW was a snap for me. Please understand that I'm not bragging, it's just that, when I became a ham, I had been a musician for about 30 years, about 20 of that professionally, so I dealt with rhythm on a daily basis. Learning CW was simply learning another style of music. I had a very unfair advantage over the rest of those in my class.

And, I know that for a fact some people simply do NOT have that inborn rhythm. I've taught piano, guitar, violin, banjo, dulcimer, trumpet, trombone, and I can tell you one thing. If a person doesn't have some kind of inborn rhythm, he/she might be (perhaps) taught the mechanics of rhythm, but they will never be taught rhythm. (And there is a difference between the mechanics and the real thing)

Same, IMO, with CW. A person might be taught the mechanics of rhythm.......but without some sort of inborn rhythm, they'll never be able to acheive even a moderate level of success with it.

Just my opinion
Rick N9GSU

You guys crack me up. YOU assume that I didn't know anything, and that I didn't read anything about it. YOU couldn't be more incorrect, except insofar as this subject upon which you pontificate so eloquently yet so ignorantly.

You cited the same page 3 times for answers to my challenges. Let's review.

You said that, "open wire feeds can result in electromagnetic field levels which exceed the allowed levels that all hams are supposed

to...[meet]." You attributed that statement to the ARRL webpage in your first generalization, and then cited the webpage above as the source. I invite you to actually read that page and tell me where such a statement exists or is even inferred.

You then stated that, "somewhere on the ARRL web pages, you are told not to use open wire transmission lines any more." Once again, when challenged, you cite the same page, where the ambiguous phrase, "Use good coaxial cable, not open-wire lines or end-fed antennas that come directly into the transmitter area," can be found.

In fact, that is the sole reference to open-wire feeder in the document, and in context refers to bringing the feedline into the shack (transmitter area), not as a blanket prohibition. And that being the only reference highlights the ignorance of your first statement.

Moreover, in the entire article, every discussion, every graph, every calculation, and every FCC requirement is concerned with antennas, not feedline of any kind.

As I said, it is an FCC requirement. EPA provided input as did FDA, IEEE, and ANSI, and several other initialled organizations, but to say it was an FCC/EPA program simply isn't true.

My statement that EPA had nothing to do with it is incorrect insofar as their being involved in studies, but it was not a joint effort anymore than it was a joint FCC/FDA effort. Read the R&O.

You might want to check YOUR attitude at the door in further discussions, and you might want to do a little more accurate and complete work when you do the resarch someone has "asked" you to do to support wild allegations and speculations irresponsibly made by you.

It's not for me. If you want to have any credibility in discussions, you can't speak from legendary knowledge. And you can't assume the other guy is ignorant. I'll give you fair warning, unless a topic is part of my day-to-day working knowledge, I always verify my information before I post on it. Sandbagging ignorance is one of my hobbies.

I was referring to the original posts obvious tongue-in-cheek reference to having to elmer us new Gs and Es by some old codger who could brag he copies 20wpm. I took my Advanced in the Spring of 1973 from Angelo Ditty, Atlanta's FCC chief at the time. I finished the test a little early because I taught electronics at Sumter Area Technical College, at the time. Teaching electronics, I learned 800% more about it than I ever did sitting in a classroom as a student. Well, I couldn't just sit there and wait so I took my exam up to be graded......

The room was DEAD QUIET with everyone else scratching away on paper and head. Mr Ditty (sp?) put the answer key with all the holes in it over the paper (it was my first multiguess FCC test) and I only got THREE RIGHT! Hmm...not good. With a stern look at me, he was about to say something he'd regret, later, so I asked, "Why are you using the 'B' key over my 'A' test?" (or something to that effect). His answer was unintelligible but every eye in the place was now on ME! I had upset His Immenseness who would be grading their papers later....

Now the correct key was placed over my paper (who knows how many flunked from this mistake over the years). My next cold stare was followed by, "Where did you get the answers to the questions?", much to the amazement of his GS-3 clerk/typist sitting next to him. "Sir!", I replied with my astonished look, "I teach electronics in a college for a living. I have a 1st phone with Radar endorsement and I think this test is an INSULT (emphasized for effect in my speech) to my intellegence as a professional!" A simple, "You passed and got 'em all right!", was his reply. End of conversation.....

The assemblage started breathing on their own several seconds later as they ran short on oxygen. It was right out of an old movie where the slave Jews were waiting for the shots fired when one of them dared

look at the camp kommandant, directly. I left so they could resume their tests.

Larry W4CSC/AE newbie. 13wpm was fast enough for anyone.

Yes, I got my W4CSC (for Charleston, South Carolina) in February. The
paperwork for the previously tested newbies WAS sent into VEC/FCC in
January. I simply didn't understand why having this data we had to
destroy another forest to send in the SAME data on Apr 15th. Seems
redundant, even for a government bureaucracy.

These newsgroups are populated by the same malcontents that plague
such illustrious frequencies as 14.313 and other such pits in our
hobby. For them, and that, I apologize to you. Ignoring such tiny
groups, referring to the whole, you'll find most hams to be even a
little 'TOO' friendly......(c;

Whatever you do, don't approach a ham's huge mobile installation and
say, "What's that?".....if you intend to get home before late in the
evening. Your education of his fantastic mobile communications
station even NASA and the military are no match for MUST be complete!
Try not to interrupt him when he's on a roll. Sometimes they get a
little testy (or is that testes?) if you balk at the complete tour or
suddenly look uninterested in something they've spent the last 30
years in R & D perfecting to the assemblage you see before you. I'm
sure you understand how important it all is to US....(c;

I was 11 when I got my Novice in 1957. A group of "old hams", long
silent keys now, took me and 3 of my friends under their wings and
treated us like favorite sons, their sons having long grown up.
Before my license came in, much to their relief because they could
actually OPERATE their own stations after we kids got stations of our
own, I could tune and load Hallicrafters kilowatt transmitters with
precision, come up on any DX station's exact frequency split on the
National NC-303 and have worked a new country for my "Elmer" he'd been
trying to work, himself, for months.....much to his dismay....hee hee.
They were certainly cooperative and friendly trying to get OUR
stations running with loans of equipment and antenna parties....just

to be rid of us for a while....(c;

Ham radio, today, suffers from the same psychological ills as the rest of the country. "Road rage", as you can tell on any band, is rampant. Humans are out of touch with themselves, overrun by technology they don't fully understand. Some feel a terrible sense, rightly, of losing what little control they had of their lives, to speak nothing of their equipment. Ham Radio in the 1950's, when I got mine, was very simple, tubes, simple oscillators, amplifiers, antennas, superhet receivers running off analog everything. It was quite easy to understand, repair yourself with cheap test equipment and a Weller 40w iron, tune and align with a minimum of test equipment. This is, of course, no longer true. I doubt 1% of us comprehend frequency synthesis, digital signal processing, switching amplifiers and power supplies, etc. So, as much as this cowboy independence of the past is romantic, we are NOT going to troubleshoot the 256-pin, 16-bit, microprocessor-controlled rigs to more than telling the LABORATORY equipped to fix it which FUNCTION we THINK is busted. I say we THINK because many times I've fixed my 45wpm, Extra-Class-Since-Hiram-Was-21 friends computerized rigs by simply rebooting the processor and starting over. It is a computer, you know....(c; This feeling of losing control over our destiny in EVERYTHING we own or touch promotes the general feeling of helplessness and the rage you see on the newsgroups and on the ham bands.

I'm 54 now and swimming DESPARATELY to keep myself from drowning in ignorance of new ideas, concepts, designs and engineering......but, I'm still AFLOAT, so I'm just glad to BE HERE AT THIS TIME!

Larry W4CSC/AE.....The BEST hams around here are NO CODE techs putting up repeater systems, climbing towers and linking TO THE BENEFIT OF ALL! God, thank them, will you?!!

<< John Sullivan discovers in the house he inherited
his father's old ham radio and begins to play with it. >>

Could be confusing to the general public who may think it's okay to get an old ham rig and play with it, sans license (as depicted in the movie).

Aside from that, the movie has many entertaining moments and a clever plot. Hams will get a chuckle over...

* Dennis Quaid's vintage Heathkit (SB-104?). Works with no coax plugged into the SO-239 jack
* Rig powers ON or OFF by itself
* Rig randomly switches from PTT to VOX
* A character's comments re ham radio: "amazing that people still use this old stuff!"
* "CB" QSL cards on wall of Quaid's shack
* Triband beam on the roof never rotates
* Technicolor "aurora" seen over NY skies circa1969 causes no panic
* Wife doesn't care that Quaid is hamming all day and night
* No TVI complaints from neighbors

What country are you from?
I wrote the US and Aus exams before writing the Canadian Basic.
on the US, I got 96%, 98% and 94%.
on the AUS, I got 92% and 96%
I passed all of these with out studying.
The Canadian exam I didn't do near as well, There was no comparison
between them and the CAN. It was down right HARD!
I would go as far as to say 5-10 times harder after studying for a
few days.

That why I ask what country you are from.

Michael,
On the TS-440 thee is a small slide-switch located
inside(forgot which board) labeled 'tune'. When this
switch is in the 'tune' position, all output is reduced
to between 10 and 20 watts. Make sure this switch is
in the 'norm' or 'op' position for normal operations.
If that isn't the reason for your low output, then
I would have to think the radio has been 'diddle-sticked',
and needs to be 'gone-thru' by someone who knows what
they are doing.
I am assuming, (bad practice), that you are following
the manual as to operating settings of controls etc. IF
not, then you really need a manual.

Well, yes and no. I think the 5 wpm code speed was inevitable given
that other countries had already adopted the slower requirement, but I
can tell you Ham radio was fast becoming a geriatric hobby.
Will slow code speeds bring more techs and engineers from a younger
generation? Well, I doubt it since in the sixties radio was still more
or less techno, but today.. computers and cellulars dominate younger
folks techno living rooms.

I can't imagine keeping the cw bands as they are when only a very
select few will choose to deploy cw.
But, I have a very simple 100 watt station and am quite sure on SSB
would be drowned out. In past few days I've worked, VU, VK6, ZP, OH,
UA0, JA6 .. and more.
The simpler the set up the more important cw becomes.
I can see a lot of folks saying, I's like to work ham radio, but my
income, family requirements etc. don't let me put up a 70 ft tower, 5
element telrex and 1kw amp.
I would then say, cw may be a choice that will let you have the fun
you want at a cost you can afford.

Well, I've been licensed 41 years this June and still enjoy hamming, but
find the simpler side is more enjoyable. Lots of people have gone QRP,
at a watt or so.. but so far 100 is as low as I'm willing to go given
the limited time I have to call DX.. and get a QSO.

From what I was told and seen just last night,
9600 on vhf and 2400 on uhf.
Not sure what your getting at, but on VHF, 9600 is considered fast.
I think your reading what he said wrong, it wasn't a comparison
between the two.
The comparison was made to high speed internet and he was just
stating the speeds on both.
That's the way I read it.

Friendly? Pleease! After reading the crap in this newsgroup? I tried apologizing to one individual and he took another shot at me! Friendly? Dream on! There might be a few friendly people here but they're hard to see with all the flaming going on.

Hams are better in person or on the air, but esp the OT's (not
entirelythe OT's but esp) are still grousing bout the loss of 11m to
CB as if it were the fault of the newcomers or some such nonsence

If you and ARRL think "they" are choosing ham radio over the internet,
you've been reading much too much of your own propaganda. The
Comcast@home cable system in Charleston, SC, ALONE, adds 350 new users
per WEEK! That's just one of 82 ISPs serviing Charleston I know
about...Yeah, right.

Yeah, that's right! I'm a new /AE and have only been on the air since
1957. I need LOTS of directions. I've been in Electronics since Navy
"A" school in 1964. I need LOTS of directions. I've had a 1st Phone
with Radar endorsement since 1967. I need LOTS of directions.....

I've been a ham longer than a lot of Extras have LIVED! I need lots
of directions. Until now, only FCC employees gave me my code and
UNPUBLISHED tests. I don't need lots of directions.....thanks.

Larry W4CSC alias half a dozen other calls.....(c;
God, you'd think every new General or Extra just crawled out of a
hole. How stupid......

I see by your WA2 you've been around, too, Bob....hee hee. Think
we'll just ruin ham radio with our new priviledges we had BEFORE ARRL
incentive licensing nonsense put them on a little pedestal to be awed?

Hmm...that's going to be kinda hard, here. Most new AE's have been on ham radio around here since the 1960's I saw in that upgrade room filling out forms for the tests they took in January. If you put a requirement that they had to be on the air for 20 years before they could be an Extra, it wouldn't have made any difference to any of them!

> between the two.
> The comparison was made to high speed internet and he was just
> stating the speeds on both.
> That's the way I read it.

Okay, let's back up a bit. The original query was, "...but I am looking again to see if it has evolved far enough to serve as a high speed internet connection."

No differentiation between HF, VHF, UHF or anything.

Then the response we are discussing said, "On VHF 9600 baud is considered fast, and 2400 is it on HF."

By implication, the comparison was between the two most popular segments of ham radio; HF and VHF.

Now consider history. HF has never been allowed more than 300 bauds (with the relatively recent exception of 10 meters, and its max is 1200). So, although 2400 would certainly be considered fast on HF, it isn't and has never been permitted.

About ten or fifteen years ago, 1200 bauds was the highest you could use on VHF up to 220 MHz. You had to go to 220 MHz AND above to use the 9600 bauds stuff that was starting to come out on the market. Keep in mind that 9600 modems were not the limiting factor in the speed change; it was the radios. Up until about 1989 radios had to be modified for 9600 bauds. And even the early PLL "9600 ready" radios were finicky.

Then (I don't know when exactly, my most currently available hardcopy set of regs is 1995 and it's in there) the standards were changed to 19.2 kbauds above 50 MHz and 56 kbauds above 220 MHz. The significant point is, the higher in frequency you go, the bigger the bands, and the more they can accomodate the higher bandwidth of the higher speed modems. That's why citing a lower speed for UHF than VHF doesn't make sense.

Now I was on packet on 2 and 220 at the time, but I never did 440. I have no reason to believe there was a standard other than 1200 or 9600 on that or any other VHF or UHF band. In fact, I don't recall any 2400

bauds packet anywhere. Not that there wasn't, I just am not aware of it.

So, given that history, and considering the statement, "On VHF 9600 baud is considered fast, and 2400 is it on HF," I believe he was (erroneously) saying 2400 on HF. The statement doesn't make sense otherwise.

Anyway, unless he comes back to clarify (which I'm sure he won't, because either interpretation is factually incorrect), we won't know. I won't argue the point further.

It works faster if you use:
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/uls_call_res.hts?db_id=19&rows=&callsign=W4CSC

and simply use your call in ALL CAPS at the end of this URL than mine.
Book mark it and you don't have to go through the other pages....go
direct. I tried several calls at the end of the URL and it works
great direct.

Thanks for the pointer. I'm E "eligible" having passed in Jan, but
the paper, of course, hasn't caught up with the assigned call.

Now, seeing as how FCC's own database KNOWS all these hams are
"eligible" for their upgrades on April 15th......wouldn't it have
saved EVERYONE a ton of trees, 5 million volunteer examiner hours and
countless mandays at the now SWAMPED FCC licensing bureacracy to
simply write a few lines of code into the ULS to AUTOMATICALLY just
send everyone who took the early tests their new license EXACTLY on
Apr 15th at 00:00:01 EDT? Hello? Is anyone home up there?? Why have
a database at all if you DON'T USE IT for anything but a doorstop??

Larry W4CSC/AE since January 15th....(sigh)...just waiting for the
changes they all KNEW were ordered!

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr19_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr19_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr19_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

One could say the same thing about a driver's exam. These types
of exams are absolute *minimum* entrance requirements, not graduation
certificates. I'm a lot better driver now than when I got my
driver's license at age 14 although I have forgotten the answers
to some of the questions on the test.

We've not had a very technical exam in ham radio for at least 50
years. The entire complexion of ham radio would be changed if we
suddenly initiated a highly technical exam. It is not something
to be done willy nilly. It would be somewhat akin to requiring
an engineering degree for every ham.

I
| have no reason to believe there was a standard other than 1200 or
9600
| on that or any other VHF or UHF band. In fact, I don't recall any
2400
| bauds packet anywhere. Not that there wasn't, I just am not aware
of it.
|
| So, given that history, and considering the statement, "On VHF 9600
baud
| is considered fast, and 2400 is it on HF," I believe he was
| (erroneously) saying 2400 on HF. The statement doesn't make sense
| otherwise.
|
| Anyway, unless he comes back to clarify (which I'm sure he won't,
| because either interpretation is factually incorrect), we won't
know. I
| won't argue the point further.

>That refutes the assertion you just made.

Not at all. If you look on the bottom of Page 24 of "Fifty Years
of ARRL" the footnote reads: "This portion of the story is exerpted
from 'Two Hundred Meters and Down,' by Clinton B. DeSoto." The
10/6/99 post came out of "Fifty Years". My copy of "Two Hundred
Meters" is back in my Nevada home; on 10/6/99 (middle of the Fall
semester) I was in Hawaii using "Fifty Years" as my reference,
and, as mentioned, "Fifty Years" quotes DeSoto's book.

Still awaiting your list of other books on amateur radio history;
you did say there were others.

Please, tell me any other titles you might know of on amateur radio history. I'm only aware of about a half dozen books devoted exclusively to amateur history. Dozens of other book on general radio history don't don't contain specific details pertaining to amateurs.

No.

Why? Because I doubt you will get agreement on what the "quality of
Amateur Radio Operators" really means. This is such an emotive term, YOU
will have to define what you think it is and re-ask the question based
on your perception.

Regards,
Mark.

>at least 20 years.
>It certainly is obscure, at the very least.

John, DeSoto wrote his book back in the 1920s or 1930s (my copy
is in Nevada); a *reprint* was made in '81. Those reprints were
available at ham radio stores (I bought mine at Henry Radio
in L.A. in the mid-80s). He lived through the era of the new
science of radio and was able to draw from publications, news
reports, attendance at conferences, et cetera. Why would Amazon
conduct a review on a book published some 70-80 years ago?

>And then there's the matter of Desoto's livelihood and allegiances;
>namely, the fact that he was a part of the ARRL Headquarters staff.
>That would seem to me to make it very difficult, if not impossible, for
>him to be an objective historian.

As he details in the preface, the book was written *before* he went
to work at the League. For some reason which I can't recall (again,
my copy is in Nevada) he was not able to find a publisher. He goes
on to say that once he began employment at the League, they agreed
to publish his work even though parts of it were critical of the
League.

>As most university historians will tell you, someone who lived through a
>particular period is useful for reporting the facts, but is not
>generally considered to be a neutral observer.

Can you document this? The use of the superlative "most" is a bit
troubling.

>Historians prefer not to
>rely on material produced by such people as unbiased.

Have you read the book? He writes as a writer reporting facts:
dates, people, places, outcomes.

The history of the new science of the Internet is being written
right now. Who is more reliable: Today's writers living through
this era, or someone in the future, completely detached from the

present day-to-day advancements?

>The ARRL itself was known for being less than objective in its early
>years. Having claimed the first coast to coast radio relay for itself,
>the League conveniently ignored the fact that another relay league
>championed by Hugo Gernsback had already accomplished a coast to coast
>relay the previous year. In fact, the ARRL was the second organization
>of amateurs to form, the first apparently being the one that Gernsback
>championed in his magazines -- the Radio League of America (RLA).

This casts a shadow of a doubt on everything you've written, for
Gernsback's organization was the "Wireless Association of
America." He claimed he had 10,000 members in 1909, when in fact,
there were only about 600 transmitting amateurs in existence.

>The
>ARRL and the RLA were reported as being bitter rivals, with the ARRL
>apparently being the instigator of the whole affair through its QST
>editorial pages, and through one article "The Danger Signal Up" which
>warned against joining such organizations as the RLA.

The League wasn't born until April 6, 1914. The first issue of
QST appeared December 1915. By then, Gernsback's WAA was no longer
in existence. Where are you getting your information from?

>During this
>period of time, neither organization was particularly objective, and it
>is clear that anything written by members of either organization must be
>taken with a grain of salt.

Your opinions are based on falsehoods. DeSoto's work was written
before he went to work for the League.

I'm sorry, but with the grave errors you've committed, you have no
credibility.

I'd be a lawyer if I could get the Bar Exam beforehand, a doctor if I could
see
the Boards first. Where's the real accomplishment/challenge in passing an
Amateur
Radio exam? -- Skill in Amateur Radio comes with operating, experimenting,
operating,
building things and uh, operating. Respect and sense of accomplishment lie
therein and
"Standards for Entry" will, ultimately, IMO have little effect on Amateur
Radio from a
worldwide (HF) perspective.

First of all, "John", anyone who has known me for the last several years since I've been a ham, and active on the 'net, knows that I'm anything BUT a troll. That question was asked sincerely.

Secondly, I signed my callsign and email address, hardly the mark of a troll. But, I see YOU didn't post that information........

The "they" I was referring to was those that are getting licensed instead of (in addition to?) the other choices. And, yes, I "and the ARRL" do believe that those who get ham licenses are choosing ham radio. I thought that the meaning of the sentence would be obvious from the context.

Mr. Jones is correct.The present exams do not test ones knowledge of the subject matter. They do test ones ability to memorize answers. I know many tech + license holders who know NOTHING about electronics what so ever but they do (or did) know how to pass the test. Thats just the way it is these days. If the fcc was really serious about hams knowing technical stuff these tests would be different.

You're after abstract quantities and qualities. An abstraction
can be debated until the cows come home. Regardless, a goodly
part of the time spent obtaining a ham ticket used to be cw
proficiency. That, per se, instilled a degree of commitment
and dedication. Those WERE measurable qualities........KZ5B

> >nor did it lower the standards of our national pastime.

I have to agree with most of your position, however, the above misses two very significant points. P.K Wrigley laid down the commitment that there would not be night games at Wrigley Field, not because it was in the interests of baseball, but because Wrigley Field was built in a residential neighborhood. Parking for local residents who would otherwise be at work during day games would be consumed by squatters for night games. The concept of parking passes for the locals has proven to be a politically correct farce. Further, noise and traffic at night from patrons leaving the game passing through residential areas would constitute a hazard for local pedestrians and children who were outside enjoying the neighborhood during summer nights. And more importantly, there would be the noise of the game, and the terrible public racket for an hour or more after the game as the patrons,--Cub fans are never quiet after the game--left to go home.
What was compromised was the relationship between the residents of Wrigleyville, and the Park, and the commitment that Wrigley Field would be a good neighbor for the residents.

Of course when the interests are commerce, and television, who at the top gives a FUCK about a good relationship.

Bad example, this. It not only doesn't make your own point, but it supports the resentment of your opponents.

A diety has nothing to do with the ham bands, the only way we can
starighten them out is among ourselves...in other words, it's up to us,
the hams to make the bands better.

I see I should have been more clear. I should have said something
like; "older hams on HF". I concede the point that a LOT of guys/gals
have held the old Technician and are now upgrading. And you know
something? I think that is great.

Do you remember that the original Technician ticket was for
the "experimenter". It later evolved into a entry level. Interesting
how things change.. hi.

There is a big difference between instructing you to study the
handbook and suggesting that the handbook be studied.

From Webster's: "instruct - to give an order or command to"
"suggest - to mention or imply as a possibility"

The ARRL did NOT command one to study the Handbook. They
merely mentioned it as a possibility.

> You guys need to get your stories straight.

The ARRL License Manual said everything one *needs* to know
is contained in the License Manual. Therefore, a Handbook is
NOT needed. The Handbook was *suggested*, i.e. mentioned as a
possibility for further study if anyone was interested in further
study. The License Manual did NOT *instruct*, i.e. command anyone
to use the Handbook.

The stories are straight. Your inferences are crooked.

This is probably a bad comparison, but bear with me and maybe you'll understand where I am coming from. The Dallas Cowboys are a "supposedly" top-notch football team--er, at least they were. BUT, when they were "on top" several years ago, look at their competition. In my opinion, their competition pretty much sucked.

Then, the past few years--their competition has been maturing, getting better, outclassing the Cowboys...now look where the Cowboys are...(the fact that the dumbass owner doesn't know how to let a team be coached).

I'm not saying the damned technical references are one way or the other, hell it would all be mostly Greek to me. Just because the Handbook "was the greatest selling technical publication in the country" doesn't necessarily mean it was good--it may mean that everything else available was that bad...that's all I was querying about.

Your 100W station should be _more_ than adequate to make all
the contacts you want. I run an FT-920 (100W) with no amp into either
a flagpole or a 3' MFJ Super HiQ loop less than 12' above the ground,
and I only need a few more contacts for my five band dxcc--all phone
and many (including over 100 on each of 20m and 10m) operating qrp
phone at 4.7W or less. If I can do that with _my_ setup--you certainly
can do so with a better antenna system (I suffer from antenna
restrictions or I'd have one myself).

CW is a worthwhile mode--but it isn't necessary to be active
as a dx'er--and certainly isn't needed if you are interested in the
less rare stations (even the dxpeditions are easily workable qrp phone
if you have enough patience--I've worked quite a number of them with
no problems).

>The simpler the set up the more important cw becomes.

Not necessarily. If you are a hard-core award chaser with a
limited antenna/power combination that may be true, but if you are
content to take your time working for awards--or simply enjoy rag
chewing--CW is really a matter of personal preference, not necessity.
I run a 25W 10m rig in my car--with an attenuator in line dropping it
to under 5W--and I've worked over 50 countries with that very simple
rig in the last six months or so. I may not have the strongest signal,
but I manage to make the contacts anyway--as can anyone else with
patience and a willingness to put in the effort.

>I can see a lot of folks saying, I's like to work ham radio, but my
>income, family requirements etc. don't let me put up a 70 ft tower, 5
>element telrex and 1kw amp.

Neither do mine--nor do the antenna restrictions, for that
matter.

> I would then say, cw may be a choice that will let you have the fun
>you want at a cost you can afford.

Provided the individual him-/her-self enjoys CW personally,
that's very true. Otherwise, it becomes a chore rather than a
pleasure.

>Well, I've been licensed 41 years this June and still enjoy hamming, but
>find the simpler side is more enjoyable. Lots of people have gone QRP,
>at a watt or so.. but so far 100 is as low as I'm willing to go given
>the limited time I have to call DX.. and get a QSO.

Give qrp a try sometime--you might find it's more fun (and
addicting) than you would expect.

> aircraft, anyway. I guess some habits just die hard.

It is a shame that people find it so easy to put down the protestant,
catholic, and muslim, religions in this country. Bad things were done
in the name of nearly every religion in this world, so why center only
on these religions?

Actually, I suspect these individuals are "liberals" who feel they are
superior to people who have any religious faith. Of course, one could
point out the horrible things that were done throughout history by
people who claimed no specific religious belief.

Or one could point out the horrible things that have been done by
people who were openly opposed to religion. In other words,
anti-religious fanaticism can be just as dangerious as religious
fanaticism (the bad deeds of anti-religion fanatics were seldom limited
to just religious groups).

Please note that I'm not a member of any religious group. I'm just
darn tired of the anti-religious nonsense that is being spread around by
some people.

pogopossum,
What I am," understandably upset (even incensed)",
about is not that the,"new hams"..."have an easier path
to upgrade than" I did, but that the ham radio hobby
is going the same "dumbed down" route as our whole society
seems to have gone. No matter what values you speak of,
the easier you make it to get to the objective, the less
'quality' you will have.
The new hams are welcome. It seems you are causing
more discontent than the people your 'pointing a finger'
at.

1783. Re: Ladder Line Better???

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC
From: W5LZ <w5lz@oio.net>
Message-ID: <38FE53DE.EDC276B2@oio.net>
Source record: 113442

KC8LVJ,
It would depend a lot on what your power output is.
9913 is good coax, but has a voltage rating of 600v. If
the SWR is high, and the output power is high, the 9913
may be harmed or destroyed by the resulting high voltage
on it. You wouldn't have this problem with ladder line.
That doesn't necessarily mean that the ladder line is
'better' all the time, it isn't.
If your going to try ladder line, it's better to use
a tuner made to handle a balanced line, rather than a
balun. The impedance on various bands won't always be a
4:1, or 3:1, or 1:1 match to the 50 ohms of your transmitter.
A tuner that can handle a balanced line should be able
to match -almost- any impedance. Just makes more sense
to me....

> up rose gardening).

You're right. The movie alone is not going to do a thing. But ham operators can use the attention the movie gives amateur radio to promote amateur radio, even if that attention is only slight.

And it can be effective. I got a new friend interested in amateur radio after we watched a movie at his house. A segment of that movie featured a radio operator and I used the opportunity to describe what the movie charactor was doing. I then invited him to my house to do the same thing on my radio (carefully pointing out that he could be doing the same thing - its not that difficult).

So, you're right, nothing outside of amateur radio is going to have that much of a positive effect on ham radio. This service is going to expand only if existing operators help it along. And it makes sense to use whatever presents itself in the "real" world as a means to do this (even a movie).

Well by eavesdropping with my scanner I have found out that my sixteen year old neighbor boy was arrested for burglary and is smoking pot. Also by listening to my scanner I was able to help my local police department catch two people who were involved in an assault near my home. I heard the description of the persons involved in the assault on the scanner and was able to tell the police where they were because they walked right in front of my house! So don't don't give me all this B.S. about listening to private conversations. Next you'll be telling me that I shouldn't listen to the storm spotters or the national weather service because I might be warned about the tornado that is coming for my house! I agree leave the scanner listeners alone and worry about things in this country that need real attention.

The 'KATY' used telegraphy till the mid-80's. How old
would that make a telegrapher retiree from the 'KATY'?
And yes, there are two types of Morse code, International
Morse code that hams are familiar with, and American Morse,
the 'clacker' code like used by Western Union, railroads, etc.

> exchange? Never heard of "go ahead" or "over?"

Yes. Those Extras who show up for disaster work with no training in
disaster communications.

The good ones pay attention to all those no-code Techs who are in charge
of field commo units until they get up to speed.

The others come here and whine about how restructuring has resulted in a
lot of untrained operators.

Funny thing -- all of those new HFers will learn HF the same way those
good Extras learn disaster communications -- by following the examples
of those who know how it's done.

1803. How to be a UnaBasher

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC
From: K0HB <K0HB@arrl.org>
Message-ID: <8dkmvu$rk8$1@nnrp1.deja.com>
Source record: 113494
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Most of us view, with some level of disdain, the various UnaBashers here on rrap, rram, and other amateur radio newsgroups.

These UnaBashers, like mf_luder, Burt, W2DNE, Radio_rambo_whatever, N0iMD, regularly show up here bashing ARRL, CQ, Morse Code, or some other facet of the hobby that pissed them off this morning. Some of these bashers are more successful and refined than others, so I thought I'd post some rules that they (or you) could follow to become a really good UnaBasher.

Rules for Successful Bashing -

1. Be anonymous, like mf_luder or W2DNE. Most of us know who you are anyhow, but you'll impress Mark Morgan.
2. Use 10% fact. 90% suggestion. The facts will lend credibility to your unfounded suggestions.
3. Use multiple ISP's, handles and aliases.
4. Use two (2) or more aliases to simulate a discussion. The 'pit bull' tries this, but is always betrayed because all his messages come from the same IP address.
5. Identify the "gurus" on the newsgroup and suck up to them.
6. Give the appearance of being open minded.
7. Be bold in your statements. Dummy newbies follow strength.
8. Write headlines in caps with catchy statements. (Where is MASA?)
9. Don't worry about being labeled a "Basher". Newbies won't know your history.
10. When identified put up a brief fight, then back off. Return in a week unless your foe is a weak in reasoning powers.
11. Form your bash as a question, not a statement. Like "Does ARRL hate technology?", or "Why can't most Extras figure out Ohms law?" People can refute your statement, but nobody can answer such dumb questions.
12. Three or four aliases can dominate a newsgroup and wear down the target.
13. Bait the target into personal debates putting their focus/efforts on you and not the facts. Divert their attention from facts.
14. Do not fall for challenges on the truth of what you are saying. Bashing is a game and you are playing it with your own rules. Ignore embarrassing questions which betray your lack of research, or call the questioner a Nazi or a liar. (See Anderson and Stevenson for instruction.)

Your are a:

Grade "B" UnaBasher:
If you post lots of old news, respond to all positive posts with a negative side. Never respond to being called a Basher.

Grade "C" UnaBasher:
Very good way with words, always claims to be your "friend" taking the positive poster into confidence, sucks up, and then uses the relationship to bash somebody else.

Grade "D" UnaBasher:
Needs to learn the basics about being convincing when making a negative statement. Has no anonimity whatsoever, and tends to use quotations of others (preferably of dead people), rather than original thinking, to make their point.

Grade "F" UnaBasher:
A complete idiot, most readers are not convinced he knows anything about amateur in general, let alone the current topic of conversation. The type that says something "sucks", but gives no rationale, shows up every so often but no regular schedule.

Thanks but yaw'l sound like a bunch of voodoo cultists who's idol just fell over. FWIW I just got my "welfare" general ticket and, if I can spare the 10 or 15 minutes of study needed to pass the extra written exam I'll do that too.

I had good reasons to "wait 20+ years". I held a first class radiotelephone license with endorsements so I found the tests you sweated over sophmoric (to be kind) and the lack of questions on emergency station operations appalling. OTOH I suffer from severe tinnitis - I hear loud ever changing tones that sound much like code continually - and while I could have overcome that handicap with enough work, I feel the same about being told that by someone to whom code comes easily as a parapilegic feels about being encouraged to run a 4-minute mile. And what was I to gain for the effort? The ability to exchange a few items of meaningless drivel with enough other idiots to win contests faster? In 3 years on the novice HF bands, all I did was exchange QSL data! Any attempt at personal conversation was ignored, so my HF rigs have been packed away ever since. Moreover, I did work on code as often as my job and other commitments allowed but, given my handicap, that was never enough so I eventually quit trying. Now those of you who ignored job, family and friends to spend hours learning code are finding it hard to accept that it was a waste of time - that all you got for it was the exclusive use of a piece of public property that - boo hoo - has now been reclaimed by some of the people who own it - to wit, J.Q. Public.

FWIW, I just got my "welfare" upgrade to general and, if I can spare 10 or 15 minutes to study required, I'll go ace the extra written test like I did the old general/tech test and bump up to extra too.

Status? I hate to tell you this but there is no more reason to be proud to have learned code than I have to be proud to have learned Latin and except in mutual admiration societies, there is no status in knowing morse code. I have never met a woman who wanted to date a guy because he knew code, etc. etc.! Sorry, but if you've been basing your self respect on code speed then you're gonna need psychiatric help pronto.

KA3DWW/AG ... grinning all the way :o)

>

There is not much available but let me give you what little I have.

One of the ideas that seems to float around in the code/no-code debates
is that the code requirement hinders participation by people whose
main interest is technical rather than operating. To me this idea
seems kind of reasonable, but didn't correlate with the people I knew.

During an earlier version of the code debates I decided to see if there
was a way to quantify the relation of code speed (everyone had to
do at least 5wpm back then) and technical interests. So what I did
was go through a year's worth of Ham Radio Magazine, write down the
callsigns of the authors and compute some statistics.

[Note for newer hams: Ham Radio Magazine was a monthly publication
devoted to technical and construction articles. QEX is about the
closest thing around today. This was ten or so years ago.]

The results were more lopsided than I expected. It was about half
Advanced and half Extra. There was one Technician and no Generals.
There were probably a couple of non-US authors in there, too.

There you have it. An actual fact showing a correlation between
speed of CW (at least passing the test) and being dedicated enough
to build something and write an article for publication.

So what, if anything, is the significance of this? Some guesses:

- Hams who are more active in any type of amateur radio activity
are more likely to have higher class licenses.

- Such qualities as persistence and the ability to overcome
obsticles can be applied to any problem whether it be learning code
or building a radio.

- [Add your guess here]

In my personal aquaintences are several Tech Pluses who are quite active in the technical aspect of ham radio (haven't come across any no-code techs with a technical interest yet, but probably will soon). But the majority have higher class licenses.

I have occasionally taught code to aspiring hams and often wonder why some people seem to learn it and others don't. The latest teaching technique I have tried has been 100% successful so far, but I have had too few students to know if is really any better.

73,
Gary

So tell me, John. Did you have to draw a over a dozen schematics and answer a bunch of in-depth essay questions for your last license upgrade - or did you just have to take one of the modern-day multiple-choice (memorize the public question pool) tests?

Did you have to show ability to copy code at 20wpm accurately and also to send it at the same speed with a straight key, or did you only have to answer 7 out of 10 easy multiple choice questions (benefitting from a lucky guess or two along the way)?

IMHO, the beneficiaries of the last round of dumbed-down 'welfare licenses' shouldn't whine so loudly about the beneficiaries of the newest round.

Seems to me that this round of code 'dumbing-down' isn't half as significant as the multiple-choice written and code test dumbing-down of recent decades.

Even if you personally are one of the old-timers who did have to take the much more difficult tests of the old days, why are you so willing to accept the recent waves of 'dumbed-down' Generals and Extras only to suddenly get so uptight about the lastest wave?

Michael, the real irony here is that, according to a truck driver friend, there are far fewer people using CB in recent years than in the old days. He says its pretty much confined to truckers doing their work. Nowadays, if you want to hear the kind of idiotic antics that Children's Band has always been so famous for, you have to go and hang out on 20 meters <grin>.

The truth is that there is nothing the CB'ers could do to damage ham radio that our current crop of mean-spirited, foul-mouthed hateful idiots (all of whom passed the old code requirements) haven't done to the hobby, already. Methinks that once the dreaded invasion of CB'ers arrives on HF, they'll find themselves right at home <g>!

Might not be a bad idea for you to try reading some for yourself.
Technical books are technical books. I've been into electronics since I
was about 8 years old. I've worked in many different technical and
engineering environments, and the ARRL handbook was on the reference
shelf in every one of them. There are certainly better reference texts,
but for practical RF applications as well as coverage of the
fundamentals, the Handbook is very useful.

What frequency is that--27.385 MHz?

Get a ham license before you try to criticize those who
already have one.

And get back under your bridge--Trolls aren't positive role
models for new hams!

1830. The Truth About Welfare Licenses

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC
From: pogopossum@my-deja.com
Message-ID: <8dkvuh$650$1@nnrp1.deja.com>
Source record: 113521

I've posted these sentiments to a couple of threads, but I think they bear a more public airing in their own thread:

A lot of current hams - Generals through Extras - are understandably upset (even incensed) that new hams and especially long-time lower grade hams have an easier path to upgrade than they, themselves, did. It is true that the upgrade path is significantly easier without 13-wpm and 20-wpm requirements than it was just a month ago.

BUT, the truth is that this isn't the first time that license upgrade requirements were 'dumbed down' and many of today's so-called "Real Ham" complainers are, themselves, beneficiaries of earlier rounds of dumbing down - and are holders of earlier versions of 'welfare' licenses.

Once upon a time you had to take a written license test that combined the requirement of drawing over a dozen circuit diagrams (requiring in-depth knowledge of electrical theory and circuit design), and the requirement of answering a number of essay-style questions (requiring even wider in-depth knowledge). Also, to pass the code requirement, the examinee had to show the ability to copy accurately at speed and also to send accurately at speed with a straight key. Neither test allowed for any guessing or prior memorization of the answers - you really had to know your stuff.

In later years, the powers that be dumbed down the tests dramatically. The written tests became strictly multiple-choice - with public printing of the exact question pools, complete with answers available to anyone who wanted to memorize his way into a higher class.

The code test was dumbed down even more. Now, all you had to do was to answer (or guess) 7 out of 10 questions (sometimes fill-in-the-blank, but more often the easier multiple-choice format). No more requirement to copy accurately. No more test of sending skill at all (ignoring the fact that Part 97 of Title 47 CFR still specifies that a sending test must be part of the code test requirements).

Unless you took all of your licensing and upgrade tests before the era of the dramatically easier multiple-choice tests, YOU, TOO, ARE A WELFARE HAM, and really have no call to be complaining about the logical next step of the dumbing-down process!

So, unless all you last-generation welfare hams are willing to make a truly noble gesture and publicly burn your dumbed-down multiple-choice licenses, please stop the public pissing and moaning. Welcome the new welfare recipients into the fold and try to help them grow into skilled

and conscientious operators - as the previous "Real Hams" once did for
you.

I think the exams do successfully determine whether the applicant knows
what's covered on the test. The usual complaint is that the people who
pass the tests don't know anything other than what is on the test. But
I think that's generally true for a new licensee in any field.

The irony is that the test date is not the date that appears in the FCC database with your upgraded license - its the FCC's issue date. Thus, many who upgraded to General or Amateur Extra under the old code requirements just to show their 'superiority' over the newer welfare upgraders, will be indistinguishable from the guys who upgraded on the 15th. They will spend the rest of their lives protesting, "No. Really. I upgraded on the 14th, not the 15th of April, way back in 2000. Please, you have to believe me." LOL

Of course, those who upgraded to Advanced will still have dubious 'bragging rights' as there will be no more new Advanced licenses under the new restructuring. But, if they ever want to be Extras, they will eventually have to swallow their pride and accept a no-code upgrade someday. Since I doubt many of today's Advanced really want to punish themselves for the FCC's doings by denying themselves the satisfaction of ever reaching Extra, its only a matter of time before they, too, will be welfare upgrades. What is dead and what is alive?

There is an ever-shrinking mutual admiration society who's members base their egos on their ability to learn code. Historically, they controlled ARRL and thru it FCC to give themselves exclusive use of most of the HF frequencies allocated to hams. That is now ending leaving society members drowning in its own tears. But this society is NOT amature radio - not any more! Amature radio has been given a new lease on life by the same ruling that folks who made code their god find so painful, a chance to survive long after all of the selfish geezers who worshiped code are gone to their rewards.

FCC has given amatures another chance to keep our bands by reducing the stranglehold that this mutual admiration society has held on the hobby so long. Hopefully, amature radio will grow again, perhaps in directions none can now forsee. The only thing I see dying is the selfish society of fools so devoid of worth that they need a prop (code) to maintain their mutual esteem - an esteem nobody else shares.

My wife and I are going to unpack the transcievers we stored 20 years ago and seek new friends on the air. If others do the same then Amature Radio will be more healthy than ever. Here's talking with you .....

Well, I wouldn't risk it. The difference between 18 V and 13.8 V
is enough that it's possible that something in the radio will be
damaged by 18 V even though it's probably designed to handle 15 V
(13.8 plus some safety margin) forever.

One may not like the whole idea of restructuring but as long as it's law, why hurt the feelings of the newbies? Until or unless it's overturned, what's the purpose of making them feel unwelcome? It's counterproductive. Look at me for instance. I cursed out only one so far because he never heard of "over" or "go ahead." The other one I just worked, an /AG, was a gentleman who knew the ropes. And the third was generous. He said I was his first HF phone contact and would like to QSL. I asked for just a $50 bill to cover the printing of the card and postage. He bought it. It pays to be nice.

Actually, radisigs has it pretty much correct here.

The Hebrew prophesy of the coming of the Messiah goes back centuries before the advent of Jesus Christ. Religious Jews today still await the Messiah. Back in Jesus' day, every generation had at least one or two charismatic leaders whose adherents proclaimed him to be the promised Messiah. There was always one true test of the Messiah, however. He must fulfill all the prophesies to prove his status. When each new generation's candidates died with the prophesies unfilled, their followers' claims were shown to be, shall we say, unduly "optimistic."

The followers of Jesus Christ sincerely believed him to be the promised Messiah of the Hebrew people. They were unwilling to give up their belief in his Divinity and his identity as the Messiah when he died, so they reasoned that he must not be "really" dead, not "finally" dead. Its just that the people weren't ready for him yet. His death was only temporary, and He would be reborn and return to finish fulfilling the prophesies whenever his people finally proved worthy of salvation. This cleverly got around the acid test that he had failed to deliver on the prophesies before dying.

Interestingly, the followers of Brooklyn's Rabbi Schneerson - the most recent Messiah candidate - who died several years ago, came to the same conclusion. Rather than give up their belief in him, they proclaimed that he would rise from the dead. Many expected it to happen on the way to the cemetary. Some are still awaiting his "second coming." One wonders if their descendants will still be waiting in 2000 years.

During the first couple of generations after Jesus's death, the Jewish population divided into the minority who believed that he WAS the Messiah and would magically return from the dead to continue his works, and the majority, who believed that he was yet another in a long line of false Messiahs. Only near the end of the first century, did Christ's followers begin to take on an identity as "Christians" instead of simply Jews who believed that the promised Messiah had come in the form of Jesus. Some scholars attribute this identity change to their attempts to disassociate themselves from the rest of the Jewish people, who were then undergoing yet another new round of persecution from the Romans.

The new Christians spent the next couple of centuries as essentially a small cult until they made a fortuitous conversion - sometime after 300 AD, they converted the current Caesar, the ruler of the Roman Empire. He decreed Christianity the new official religion of the Roman Empire, and the rest, as they say, is History.

Right here is a good example of why we have this idiotic fight over
code vs no code. People on both sides jabbing and pushing a point of
view, at the expense of the opposition.

Now, answer me this....if you REALLY didn't upgrade because of your
tinnites why didn't you just get on of those medical waivers? Come on
fess up, you just like to stab and jab.

Now lets ALL knock off this idiotic debate over a dead issue. CW is on
its way out. The only use for it will be for us diehard cw ops to
enjoy until we croak and it goes the way of the Doe Doe birds.

I know that I speak for most hams in welcoming all the newcomers. Over the past fifty years since I got my license, I've grown to appreciate the wonderful spectrum and legacy we inherit.

Those who seek to sully it are the exceptions. Just as society's progress produces troubling biproducts, so does progression in our hobby/service. Those of us who truly care need only do our share to guide and protect her. No reason, we should derive ideas of reference from the mean spirited and mentally disordered, for their communications speak volumes only about themselves.

Instead, the well meaning should rally around tenure, so that we can give this magnificence to future generations.

What bible? There are two, right? The O.T. is merely threefold (1)it's a history of the development of monotheism (2) it's a history of the Hebrew people (3) it's a guide for better cleaning living. The N.T. is a continuation of the Old and based on the concept that if intricate truisms are put into laymans' terms which Christ did, then they spread. The N.T. would have never become prominent nor Jesus so inspiring had the idea of an afterlife not been so ingrained in it. Man's worse fear is death and allaying it by professing a love of Christ is Christianity's main selling point. According to the religion, he rose from the dead so if you believe it, you'll never die. And supposedly intelligent people believe this stuff? And Moses led the children of Israel for a forty year walk in the desert to the Promised Land? And Jesus walked on water and performed miracles like David Copperfield and Moses had a heart to heart chat with a burning bush as he sat on a mountain top for forty days and forty nights waiting for some tablets? And now he's the head of the N.R.A. which is dedicated to killing? Think about it: what is the main difference between it and Judaism? The concept of life after death through Jesus which has never been proved nor will it be. The Testaments were no more written by God than by man creating the seas. It's a fallacy-a hoax and a lie. Organized religion has destroyed more life than it's ever saved. All religious holidays, save one, the Passover, are man made and sponsored by Hallmark. All religious services are man made, period. When man realizes that all prayers go up and replies don't come down; when he realizes that if God exists, he, she or it has nothing to do with him; when man realizes that we must all work together as one people, void of religious labels, then we have a better earth. The concept of God unites us; the concept of only one right religion, divides us. If you want to know why God no longer communicates with man, it's easy. He, she or it is DISGUSTED with us. We have violated every precept in those Commandments and some of us do it in the name of God. How ludicrous. "Thou shalt not kill(murder)" said God and look at what's happened. We kill each other forcing an interpretation of God down each other's throats. What a joke and have a nice Easter or Passover whichever one floats your boat.

Boy that's gonna piss them off but good !!!!!!!

I remember my General from 1961 had several diagrams that I had to
answer questions on. Like the Hartley, the Colpitts oscillators and
several of various types of power supplies. Never had to draw them
out, but bet I could have. Because your right....wern't no memorizing
back then.. You had to know a little about the subject at least.

Only 8?!! The group of old hams took us to Syracuse for the
once-in-a-blue-moon FCC testing session road show. Every kid who went
was R-E-A-D-Y! We were already seasoned Novices, running these guys
HT-32s, ad nauseum. So, we knew all the General bands, propagation,
etc., from personal experience...kept up long nights we should have
been asleep and, when asked by irate educrats why we were sleeping in
class, we'd answer, "Sorry, Ma'am. I was over at Jerry's store
talkin' to a kid in California on 20 meters when this kid from Tokyo
wanted to know how the skiing is in upstate NY right now."
Astonished, and having no idea what I was talking about except she
knew, vaguely, that I was some sort of radio whizkid with my call
letters on my locker, she'd walk away mumbling something about I
should get some sleep so I wouldn't fall asleep in history
class....(how boring).

Larry....
We ALL got our Generals, that day. Our gift from the "guys" was we
all got Astatic crystal mikes with matching mike stands....(c;

Thanks, guys, wherever you are 43 years later.....mostly gone.

A minor correction; while 97.503(a) does indeed state, "...the ability to send correctly by hand...," 97.509(g) says that, "[p]assing a telegraphy receiving examination is adequate proof of an examinee's ability to both send and receive telegraphy." It goes on to give the option of including a sending test by the VE.

This change was implemented in the 80s based on the long recognized phenomenon that virtually everyone can send faster than they can receive. Answer any CW CQ from a recently licensed individual at the speed it was sent to verify that principle. (settle down readers; this is not a knock on newly licensed hams, it is an observation of inexperienced CW operators based on years of experience, and is well documented elsewhere, in any event)

The rest of your points are well taken, although some of the changes over the years were based on real world communications issues, e.g., "perfect" CW copy in amateur radio isn't necessary if one is able to comprehend the message. In other words, why fail an applicant who miscopied a period here or a letter there, if he got the other op's, call, report, name, QTH, rig, antenna, power, weather, etc., correctly?

I was the beneficiary of such enlightened administration.

I am currenting feeding my attic mounted multiband dipole (40m - 10m)
with 9913 coax. Would ladder line be better for this 80 ft run??
If so, what type/ohm should I use and what Balun would be needed?
Also, can I feed ladder line into shack directly to tuner or would
that cause too much RF in shack????

I am newer to HF and would appreciate your help.....THANKS...

Let see learning code == learning to say over. I guess I learned off
the
wrong code tapes. I also didn't find "go ahead" or "over" in any of the
old question pool. So tell me just how did the restructuring bestow
this blessing on you?

You are so narrow minded that you heard /AE and looked very hard for
anything this person did wrong. Of course you found it!

Was this a QSO with you or was to too good to talk to him/her? Did
you advise him/her on the protocol? or was you just an jerk about it?

Why are you an others taken it out on the new general/extra hams?
Because
they are able to take advantage of the new rules? They didn't have any
control over the new rules any more than you did. Stop making it
personal!
It isn't!!!!

> that cause too much RF in shack????

Lots of stuff here. Maybe more than can be covered in one post. Some time with the ARRL Handbook would be well spent, and if you can get a copy of Maxwell's "Reflections" you have the only two books you need to understand feedline issues.

What sort of "multiband dipole" are you talking about? If it's several dipoles with a common feedpoint, then coax is okay if the antennas are reasonably resonant. If it's a dipole designed to be fed with a balanced feedline and used on multiple bands, then your coax is not helping.

From your query, it sounds like you are concerned about signal loss in your coax. At HF that's not a concern with any of the normal coaxes. 9913 is way overkill for your purposes. Where feedline loss does come into play is when dealing with a severe mismatch at the antenna (high SWR).

Balanced feedlines (twin-lead, ladder line, open-wire feeder) only come in one variety of impedance, and that is somewhat unscientific in its designation. Twin-lead is usually considered 300 ohm, and ladder line and open wire feeder is generally thought of as 450 ohm.

However, in systems that use a balanced feedline, the characteristic impedance isn't important as it is in coax fed systems. That's partly because there must be impedance transformation performed for the transmitter to be happy. That answers the balun question, because many tuners use a balun to change the output from BALanced to UNbalanced (hence the name) for open wire or ladder line type feedlines.

The significant characteristic in balanced feedline is loss, which is extremely low, especially compared to coax. That's important, because with high SWR (not necessarily a bad thing), some of the power leaving the transmitter is going to be reflected and rereflected at the mismatch point (antenna). The lower the loss in the feedline, the more power will eventually be radiated.

If you are asking about a balun at the antenna, obviously that would be unnecessary with balanced feedline. With coax, the debate has raged for years about the necessity of one. Many people have run very effective

antennas with direct coax feed (including me).

Others argue that it is desirable to reduce or eliminate RF on the shield of the coax, and recommend either a balun or a simple RF choke consisting of a dozen turns of coax (don't use foam dielectric) on approx 6" form. However, that method (choke) doesn't do much outside of a range of roughly 10 MHz through 30 MHz.

The most popular method these days is the "current balun" which consists of a number of toroids on the outside of the coax. It's not really a balun in the sense that it doesn't change the feed from unbalanced to balanced, but it serves as a choke similar to the above but over a much wider range of frequencies.

The record is replete with stories of RF in the shack in installations using balanced feedlines. Many of the symptoms of RF can be eliminated with toroids, grounding, and ferrite beads. Seek out the ARRL RFI Handbook for more information, as well as the ARRL Handbook.

The current RF Safety requirements imposed by the FCC don't address feedlines; they only address antennas, and their proximity to operators, neighbors, and other livestock. I am awaiting a response from reputable resources as to what significance, if any, balanced feedlines have in the RF Safety dialogue.

I hope this helps.

1866. Two "New" Extra Class Hams Were Talking...

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <38FE389C.F8BDA511@ix.netcom.com>
Source record: 113557
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

(I am not making this up, guys. This really happened.)

I was listening on 40 meters to two hams
who had just "upgraded" to Extra Class.

Ham 1: "How come you took your new beam down?
You just bought it."

Ham 2: "Something's wrong with the feed on it.
I can't seem to find the problem."

Ham 1: "Well what's it doing?"

Ham 2: "My manual says the beam is supposed to be 50 ohms,
but I put my meter on it and
it don't show no ohms at all!"

Those darn "New" Extras....
Shows they don't know anything, right?

There's only one problem.....

This exchange took place in * 1976. *

People who don't know much have been passing the
"Extra" class forever. And it doesn't really matter.
In time, some will become technically proficient.
Most will learn the difference between "10-4" and "OK."
Some will learn to be of service in Skywarn or MARS.
Some will help at hamfests or work the checkpoints at
community marathons or teach newbies about Field Day Follies
or just be friends, talking to other friends
(and a few will be "id-juts," but we'll overlook them).

It will all settle out in good time.
The world is big enough for all of us.
The good guys will surface and
the bad guys will be swept away.

I say let's have some patience and welcome the new blood.
We need them- Make no mistake about that.
The "new" guys and gals are here to stay.
They are our peers now-
every bit as legitimate as you or I ever were.
Fighting with them is fighting against ourselves.

GL ES 73 OM DE Dave AB5S

p.s. And I hope to God they never learn to say "hi hi" on phone! ;-)

You got away lucky Yitzcock because I was all set to make a big post about the 15 year old Canadian kid who spooked eBay, Amazon, Yahoo! and others. Following that I was going to post how Janet Reno should adopt Elian Gonzalez. When one's as brilliant as I, it's his duty to enlighten and I'm glad to read you're reading and appreciating me. Thanks and have a nice Easter because even with a Jewish name you're not smart enough to be one.

I tried many CW tutor programs. I finally settled on Morse Tutor Gold. It tutored me on my PC all the way past 20wpm. I also at the beginning used Gordon West code tapes from Radio Shack. The tapes were cheap and gave me a good start but Morse Tutor Gold did the rest along with regular disciplined practice sessions. After making Extra I gave the tapes and software to our local radio club for their classes . I do not recall where I purchased Morse Tutor Gold.

Listen here, "Wags," there was nothing all encompassing about my complaint. Don't you feel threatened in the least. It's simply common sense, Welfare Extra or not, to let the other person know when to talk. What was I supposed to be, a mind reader? But the General who followed him knew what was what which ameliorated the entire situation. Tell me "Wags," did you find copying 5 wpm of code, tough?

Get the *word* out too? I thought the dip-shits only wanted CW out.

>The problem is that few people outside of amateur radio have an
>accurate picture of what hams do,

Restructuring supporters and code haters are in the same boat, they don't know what Hams do either.

>So get out there and do something to promote amateur radio.

I tried to improve & promote, but the ARRL had other plans. Promoting amateur radio would've harmed their membership drive fundraising efforts. So they took a look at the success of the citizen Band service in attracting users and selected "Lower & Slower" as the new ham standard.

"CBer's will feel more at home, if more hams feel like CBer's and we can collect more membership money from stupid people because stupid people are stupid and don't know value and are easily suckered in, and the League will come out the WINNER!, YAAAAA! and we can sell more advertising to Kenwood & ICOM, YAAAAAA! And we'll start running Cobra CB radio ads! YAAAAAAAAAAAAA!" (statements from a secret ARRL Fundraising PEP rally)

A very poor comparison, Jeff. A landfill doesn't have an off switch, or a frequency dial.
...and I don't recall seeing any rule that says a licensed ham can't also use eleven meters for short range, local communications. You can't continue to use a landfill for a park.

Hams who STEAL cable and satellite services are nothing but scum. You dirty the honour of Amateur Radio by committing the crime of THEFT OF SERVICES.

Do you think that Hiram Percy Maxum would approve of what you are doing?

Any HAM who steals is nothing but a DIRT BALL. A high tech shoplifter.

Sure HAMS do great things. But scum bags like you who steal from DIRECTV give every ham radio operator a black eye!

Do you think that BARRY GOLDWATER would pat you on the back for being a thief, or would he SPIT IN YOUR EYE?

How can you look your children in the face and say "Daddy is a good man! Daddy is a HAM. Daddy STEALS from DIRECTV by pirating their signal!"

How can any of you so called "Hams" look your peers in the eye? You are scum and you ruin the good name of Amateur Radio every time you rip off DIRECTV.

Shame on you all.

>
> 1200 baud, 2400 baud, no, no no.
>
> Can it be done?

Not today. There are at least 3 things that I think will prevent that from happening in the conventional sense of ham radio.

1. The laws of physics. Even at a paltry 56k, HF as it is configured today and in the foreseeable future does not have enough room to accomodate the bandwidth for those speeds. To put it in perspective, the 70 cm band is as large as the entire electromagnetic spectrum from DC up to 30 Mhz.

2. If you could have seen the difficulty that was had just in getting 9600 going due to transmitter limitations you couldn't imagine even doubling that speed, much less going X6.

3. Assuming there was interest, room, RF technology, and economies of scale sufficient to make equipment affordable, the moving target of data speeds would have leapt beyond that level begging the question, "why are we here?"

Now I'm no visionary, but 1 is a rock solid problem, so forget HF.

2 is certainly subject to change. Who that struggled to make a Motorola HT100 work on a ham repeater in 1970 would have envisioned cellphones?

3. Since I mentioned cellphones, I'd have to say let's see what those internet connections are like and then ask if there's a point in trying to reinvent that wheel on ham radio.

Before the internet became ubiquitous, packet radio was fun, interesting, useful. But the internet blew right by packet radio and virtually killed it, with minor exceptions (APRS, PacketCluster). It's hard to imagine internet and ham radio from the standpoint of an over-the-air connect.

But, don't let me discourage you...

Kenneth,

I agree with many of your comments. The movie is a gift to ham radio and we should use it.

We have been mentioning the movie to 6th graders in our Radio Coach classes so they have been primed to respond to the movie advertisements that will soon be in the newspapers. Our 6th grade class has been coached on radio, science and electronics for the past 10 weeks by 9 different hams that visit their class room.

I saw FREQUENCY April 15th in a preview showing (one show only) in Rochester, NY. It opens here on April 28. I liked it a lot and put a small review of it on our club's web site.

Here's hope for a rejuvenated hobby of amateur radio. I appreciate what the hobby was in the past, I enjoy it now, and I embrace the change that will come in the future.

73,
Peter, W2SKY

1897. Q & Z signals used by the US Military

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC

Many years ago I was in the US Air Force and did a lot of communication via TTY. We used several "Q" & "Z" signals to shorten our broadcasts and speed things up. An example of what I'm talking about is:

ZUJ QRL QRX

meant:

Standby, I'm busy, I'll get back to you.

What I'm looking for is a list of these signals (if they even still exist). Does anyone know where I can find such a listing?

If so, please email me at KJones@sprintmail.com I'm not sure if I'll be able to check back here for answers.

Thanks VERY Much!!

Ken Jones

My favorite:
ZUG. Translation, No....Negative

[Only the military would replace a two letter word (no) with a three letter
operating signal!]

ZUE is Yes....Affirmative

ZBO "I have traffic of the following precedence"

ZUT (bogus signal identifying members of a military radio operator faternity)

While sitting on a CW circuit in the Pacific, I heard the control station ask
for numerous repeats from one of the ship operators. The ship explained his
situation several different ways, but the shore station just didn't get it.
Finally, the ship transmitted a "z" signal and left the frequency. I looked up
the operating signal and found this definition:
"I Cannot Transmit Pictures."

1902. My license is updated in FCC database already, that was fast!

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-19 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <8djl0b$43k$1@slb3.atl.mindspring.net>
Source record: 113593

Just for giggles, I looked myself up in the FCC database. Suprize, my upgrade (and change of address) is done! So I won't need to say WA2ISE/AE anymore.

I had expected at least a month for this update to happen, what with all the Apr 15th upgrades. The Sunnyvale VEs were quick and so was the FCC.

I suppose the VEs have direct access to the FCC's database to make changes?

Of course. I recently took the Extra exam in about 20 minutes. It would
have taken at least a week to test what I actually know.

> If hams don't need to know advanced electronics to *enter* the hobby then
> why test for it?

It is a myth that advanced electronics is tested for. It is a
myth that hams are highly technical just because they passed
a ham exam.

> If they do need to know advanced electronics, why give a
> test that allows passing without learning it?

They don't need to know advanced electronics.

> Why do you suppose the Bash books were considered cheating at the time?

Because Bash beat the ARRL at their own game and produced a more
useful product. Now the ARRL is doing exactly what Bash was doing
in the past - publishing the exact Q&A. If it was immoral then, why
is it not immoral now?

On closer inspection of my license in the FCC database, see
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/uls_call_res.hts?db_id=19&rows=&callsign=WA2ISE
my expiration date is still 2006. I last renewed in 1996 as a tech plus.
I would have expected the expiration date to be bumped up to ten years
from Apr 15th, namely 2010. But as it stands in the database, I look
like an extra who renewed or upgraded in 1996, and thus passed 20wpm.
But I'm an "extra lite". :-)

Or will this change when my paper license is printed out?

The expiration date remaining in 2006 is not a glitch. That is the way that the FCC has been processing upgrades since sometime in 1994.

So now, instead of -your- pollution being hauled off to someone elses neighborhood to be dumped, its getting dumped across the street from your house. Give a hoot, don't pollute.

Cecil,
20 minutes? After two weeks or so of QRZ.COM
practice testing every day at lunch and on breaks, plus
a few tests in the evening, I think I wizzed through
the 40 questions in less than 10 minutes. Took
me more time to do the paperwork than mark the
correct answers.

> trade school a year or more to get a person to that level...

Once I was an avid supporter of much higher entrance levels. Now, I
don't see the point in arguing the toss about whether the entrance exam
is too low or not when it can be plainly seen that the majority of
Amateurs do not retain that level (whatever it is) after they have the
licence. In less than 10 years, the skill levels have dropped in many
cases to a point where they could not come near passing the exam. Indeed
in some cases it is hard to distinguish them from the people just
starting out. It is irrelevant what level they were at the instant of
the exam. Technical competence is a life long issue that the licence
does not, and cannot address.

So, what does any Amateur need more than anything else? The one thing
that has less testing than any other part of Amateur Radio and
practically the only thing he/she can be penalised for - practical
operating procedures. What is it better to have on the air? A neophyte
or an expert? The answer is the one who enjoys his/her activities
without causing interference to the activities of others. Technical
competence does not rate highly because it is how an Amateur interacts
with others on the band that is important. Do you ask everyone you

contact a quick 10 technical questions to see if they are worth talking to? No, generally you speak to those people who have acceptable operating techniques (simple manners). A technical QSO with a loud mouthed, pushy "technical expert" (no matter how informed the person is) will end much quicker that a casual conversation with a polite, affable person who has forgotten Ohm's Law and Kirchoff's law.

To have a larger percentage of Amateurs who retain (and improve) technical expertise can never be achieved by government regulation (entrance exam level). A position I'm sure all the "non-Leftists" will agree with. :-)

Encouragement within Amateur Radio is the only way that people get and maintain an interest in the technical side of the hobby. Thinking that a higher entrance exam will have any affect on the _long term_ skill level of the average Amateur is naive. I have not seen any evidence to suggest otherwise and plenty of anecdotal evidence to support my view.

If you are interested in the technical side of the hobby, you will learn without the need for a single exam. If you aren't, then the ONLY way to ensure that Amateurs keep the minimum level to pass licence is to constantly re-test them. Even this, however, does not encourage anyone to add to those skill levels.

I don't believe that licence renewal re-testing would achieve any positive outcomes for Amateur Radio as a whole. Many Amateurs who have, what I consider, poor technical skills do a lot for Amateur Radio by donating their time and effort. They are more valuable to Amateur Radio that the top gun design engineer whose efforts only affect one of two Amateurs in a specialist area and is a pain in the butt on the bands.

There is no need for the Amateur Radio Operator to have the depth and range of skills that an electronics technician should have. If this is the case, drop the Amateur Exams and simply use the exams used by the colleges.

What practical advantage would it provide though? Would the person be able to operate for longer in an emergency? Probably not as it is unlikely that they would have the materials on hand to repair modern equipment or build something up as the storm raged overhead. Would they enjoy their hobby more? Unlikely. The mathematical content would drive out many Amateurs who provide valuable public services.

Remember, most Amateurs don't want a vocation in electronics, they only want to satisfy an interest. This is where I used to get confused about the minimum acceptable standard - I was judging it as if Amateur Radio was a vocation - It isn't. At its lowest level it is simply a hobby and at its highest level, it is a public service provided by hobbyists.

Donning his flak jacket ;-)

Howdy Ken -- we also used them in the Navy - back in the 50's.
All about Q-Signals, QN Signals, Z-Signals, R-Codes, and S-Codes at URL:
http://www.ac6v.com/page5.html#QS

Note that for the Mega Q-Signal list == many are not used for Hams as they for Aviation, Marine and the like.

There is a list of Q-Signals currently used by Amateur Radio Operators. Should be used for CW - but we all seem to use them for voice as well. QRT, QRM, etc

For example I doubt if you would ever hear this on the Ham Bands - "QAU - I am about to jettison fuel" hi hi

I appreciate the reply -- I called Icom about a week ago to obtain information and the tech mentioned a case of someone damaging their Yaesu rig using this power supply. He also mentioned the rig designed for this supply (IC-701) performed the voltage regulation for 13.8 volts. Should I still be concerned when using this supply with the mirage amp? By the way, I measured the idle voltage at 17.4 volts.

I just got my first taste this morning of the blessings of restructuring. I kid you NOT. The station worked had a callsign suffix of OHO/AE. He just became an EXTRA. Did you ever try to work someone who never heard of an exchange? Never heard of "go ahead" or "over?"Someone who talks, stops and that's it? An EXTRA? Good God, what has the FCC wrought? Speaking of God, I urge you to read the lead article in this week's TIME magazine. It deals with who killed Jesus and why. You've all heard the fairy tale about the Jews yelling at Pilate, "Crucify him and let his blood be on our hands and the hands of our children?" BULLBLEEP MY BOY, BULLBLEEP. Hebrew law allowed only one type of execution-STONING. Crucifixion was an invention of the heathen Romans to scare insurrectionists and it was THEY who felt that the man was a threat to their power in the Holy Land instead of Jews fearing his threat to Judaism. Now here's the catch. The New Testament was begun 100 years after Jesus's death and at that time there was a conflict between the good old fashioned vanilla Jews versus the Messianic Jews who believed in him. There was no such thing as CHRISTIANITY then despite the lies taught to you from the pulpits and in Sunday schools. The Greeks who wrote the N.T. sided with the Messianic Jews and needed a target of hatred to sway public opinion away from the folks who brought you the Ten Commandments. Therefore Greek fairy tale artists, the same folks who had given you their bullcrap about stupid Gods and Goddesses like Mercury, Zeus, Aphrodite and the other dopes cleverly wove the garbage about the perfidy of Jesus's peoples demanding his execution. The article was based on work done by theology scholars not propagandists. It is most enlightening at this time of season especially when we still read and hear about ugly, demonic and lying Passion Plays which most informed Christians abhor. Incidentally it mentions the HORNS supposedly on the heads of Jews which portray them as devils. That too is another Greek invention to foster hatred. At the time of the writing of the N.T., Greek painters had to emphasize their point and made it very convenient to place horns on those calling for Jesus's crucifixion. Whomever said that lies don't last never took expediency into consideration.

Heathkit SB-100. 80-10 meters, 100 W output, kit made in the early-mid 1960s.

It has been described as "vintage" and "antique" but it's really not that old. And it's a pretty decent rig for the money.

The rig in "Contact" was a Collins KWM-2. Couldn't tell if it was winged or meatball, though.

Larry,

Very interesting indeed. I'm sure we all (that sat b4 the FCC) have
similar stories. So here is one of my own.

In Spring of 1961 I passed my Novice. 3 months later I was on the air
as a General. I was 14 at the time. In order to take my General test
I had to go to Pittsburgh, PA. I lived in Alliance, Ohio at the time.
That is about a 100 mile trip. Mom didn't feel like driving it so she
and I took the train. This allowing us to spend the afternoon and
night with family there.

The room was a LARGE one and was full of hopefull applicants. I looked
around and saw nothing but OLD MEN. I was the only kid there. Talk
about intimidation. Well they sat us all down for the code test. Both
receive and transmit, of course. When that was all done there were
about 20 of us left.

Then we sat for the written, and out of the 20 I have NO IDEA who
passed and who failed. WHY? Because the jerks wouldn't tell us. So I
go home and wait 8 WEEKS and to this day I can still see me opening
that mailbox and seeing my shiney new K8BHH General license.

AH, how things do change.

I have also noticed that corelation. Over the years I have instructed many classes, mostly in CW. My best students were to some degree into music. I never pursued music, but way back one of my relatives was a famous composer and music writter, his name was Gesualdo, from Italy of course.

Source record: 113629

Hi, I own an IC-PS20 nonregulated power supply rated at 18 VDC / 20A -- I would like to use this with my 2 Meter Mirage amplifier (13.8 VDC / 15A) -- does anyone have any suggestions on stepping down the voltage?

I called Icom about a week ago to obtain information and the tech mentioned a case of an individual damaging their Yaesu rig using this power supply. He also mentioned the rig designed for this
supply (IC-701) performed the voltage regulation for 13.8 volts. By the way,
I measured the idle voltage at 17.4 volts.

Thanks,

Chris

The REAL weak link is crummy, unskilled operators with no sense of
community.

I've noticed that some of the curmudgeons (of every class) are among the
worst operators to be found.

Now, will you guys stop whining and act like hams, or continue to moan
about the death of ham radio, thus ENSURING it?

Personally I'm glad he did.
I knew about the movie but couldn't remember the name.
Now I would guess that there are not very many individuals reading
this news group that are not already or will be a ARO.(Amateur Radio
Operator)
People don't just JUMP into this hobby there has to be an interest.
Usually the price of a new radio deters wannabees because used stuff
is hard to get a hold of... around here any way.

I there is someone in this news group that has no interest in HAM
radio please speak up... cause I want to know why you read it!

| Oh boy! Lots of 'new' people wanting into the hobby so
| they too can 'dream' of doing courageous things! >>

Again, I've seen the movie and personally, I don't see what all the fuss is about. IMO, seeing this movie is not going to make people rush out and take up Ham Radio (no more than seeing "American Beauty" made people rush out and take up rose gardening). The amateur hobby is presented by the movie in a very nostalgic - if not antiquated - light. It is depicted as a curiosity; something that "people used to do before the Internet". And even though a ham transceiver is central to the plot, what exactly the hobby of "ham radio" is -- is never really made very clear.

The old (er, "vintage") Heathkit ham radio transceiver is merely a plot device, an instrument suddenly imbued with mysterious, time-warping powers. In terms of telling the story, it might well have been an antique car or an old diary or a candlestick telephone. And the characters do nothing more "courageous" than have long conversations on it.

I doubt if this movie will have any impact (either + or -) on the hobby, except maybe to bring up the odd query from friends and acquaintances. (FRIEND: "We saw that movie FREQUENCY...say, you fool around with that CB-amateur stuff don't you?")

Noooooooo ! ! ! Think again Radiosigs. During the inquisition, the Pope sent out his legions to spread a message of "Convert or die". It proved to be bad P.R. so the Pope gave it up a hundred or so years later. But .. Islamic forces found it to be an effective "witnessing tool", and took up about where the Pope left off.

Sooner or later, the Muslims discovered the bad P.R. thing, so they abandoned it also. Well, aside from doing an occasional government building or civilian aircraft, anyway. I guess some habits just die hard.

One measure is to compare which mode was in use when an operator
committed a rule violation and received a notice from the FCC.
If you're able to search the FCC's records, you see very few
CW operators have violation notices.

>we'll just ruin ham radio with our new priviledges we had BEFORE ARRL
>incentive licensing nonsense put them on a little pedestal to be awed?

Poor Larry is still under the false impression that the League
created incentive licensing. Poor, bitter OM.

Incentive licensing has been around almost as long as ham radio itself.
The idea of an IL structure was created in 1923. Back then the government
developed the Extra First Class amateur license; to be awarded the ticket
one had to be licensed for at least two years, take a test similar to the
First Class exam of that period, copy 20 wpm, and have a clean record.
Extras were then permitted to operate on a band that those with lessor
grade licenses were forbidden to use. That band (200-220 meters) had
originally been open to all hams.

Moreover, in 1959, the FCC asked hams, via a Notice of Inquiry, what
incentives could be tacked on to the Extra Class license.

It was the FCC which first suggested incentive licensing, not the ARRL.

I recently retired after 35 years as an electronic and IC design engineer. I plan to resume my ham radio hobby after letting my general class license (K5AGE) lapse in 1960 while I was in the service. I plan to work HF SSB using a modern base station. I am considering purchase of the ICOM 756 Pro with AC supply through the local Ham Radio Outlet in Portland, OR. Any comments on this rig or HRO?

I am also considering using a commercial, self-supporting, multi-band vertical due to space limitations. Are these a good compromise considering space and versatility?

I would also appreciate suggestions on the best way to renew my license. Is general class what I need to work all HF bands with SSB? Is the code requirement still 13 wpm? Can I take the license exam in the Portland, OR area?

Thanks,
Thor Hallen

Good grief, its only a movie. Anyone that "relies"
on Hollywood fiction as being representitive of reality
in any way needs their head examined anyway.

Cheers,

| << | Can't you just imagine the 'fall-out' from this movie?
| | Oh boy! Lots of 'new' people wanting into the hobby so
| | they too can 'dream' of doing courageous things! >>
|
| Again, I've seen the movie and personally, I don't see what all the
fuss is
| about. IMO, seeing this movie is not going to make people rush out
and take up
| Ham Radio (no more than seeing "American Beauty" made people rush
out and take
| up rose gardening). The amateur hobby is presented by the movie in
a very
| nostalgic - if not antiquated - light. It is depicted as a
curiosity;
| something that "people used to do before the Internet". And even
though a ham
| transceiver is central to the plot, what exactly the hobby of "ham
radio" is --
| is never really made very clear.
|
| The old (er, "vintage") Heathkit ham radio transceiver is merely a
plot device,
| an instrument suddenly imbued with mysterious, time-warping powers.
In terms
| of telling the story, it might well have been an antique car or an
old diary or
| a candlestick telephone. And the characters do nothing more
"courageous" than
| have long conversations on it.
|
| I doubt if this movie will have any impact (either + or -) on the
hobby, except
| maybe to bring up the odd query from friends and acquaintances.
(FRIEND: "We
| saw that movie FREQUENCY...say, you fool around with that
CB-amateur stuff

| don't you?")

KE6HN, referred to by most as 'MOONWALKER DAVE' WITT, has places an
AD for his web site on the notorious W6NUT repeater in Los Angeles..

The 'ad' is in C.W. like a repeater I.D.....

Since when was it legal to advertise a 'web site' on a repeater in
C.W.????? This guy is a loose cannon...and placed it on the
repeater controller without the permission of the repeater owner,
Roy Tucker, N6TK...

Lets see what comes of this when the repeater owner finds out!!!

W4FQF, Call me what you will, but let's post some relevance to reality. I am definitely not a LAWYERWANNABE, being retired with no interest in becoming anything new. Holding me up to redicule for knowing something about law is patently unfair.

I put a great deal into my posts, though my answer to you came easily. Whatever my mental failings--at 61 I'm not the mental gymnast I was at 21, I do try my best to research and express.

While I addressed your posts critically, I kept the commentary respectful. You have failed to debate the issue raised while you've employed the personal attack.

In my view, you could spark self improvement by moving your rhetoric up a notch.

Judgment and opinion are fine, and they are the meat of this place. If you have strong feelings it's still possible to use civil language. And it doesn't always have to end up in name calling either. So far this discussion on the ham test has been civil, don't you think?

BTW you have complete control Kim. On Usenet you can control who and what you read. If you're poorly treated simply stop responding to that poster. I guarantee that ignoring a bore is much more effective than responding...

Awwwwhhhhhh Jeff, you know the Bible is a heck of a lot closer to being similar through time than the ARRL Handbook is. I doubt that any of the material contained in the 1957 Handbook is the same text as the 2000 Handbook.

Someone reported that the FCC only had a couple of
general exams. If that is true, it is easy to see why everyone
was angry at Bash. It meant that one didn't have to learn most
of the material in the ARRL License Manual. If the FCC had had
100 different random exams covering all the material in the ARRL
License Manual, there probably wouldn't have been such an uproar.

Of course. All I am pointing out is that although they had
similar titles, they were NOT the same books. There's almost
as much difference between the 1957 Handbook and the 2000
Handbook as there is between the Bible and the 2000 Handbook.

Since it seems to be "bad joke night(s)"..... One of our local Tech's had a spin on "destinated". Whenever he went to a local eatery, or grocery store - the guy could put it away and not gain "much" weight - he would close his en route QSO with the announcement that he was now "destituted". It was appropriate....also worked for arriving at Hamfests or gunshows.

Jim
KC7BDP
DM22qq

BTW, in response to all the "ExtraLite" jokes....There were a few guys here in Yuma who did NOT participate in the great rush to the VE's on April 15. Seems SOMEBODY had to get that ACS machine up on the hill, without making a mess like the building owner pitched out (oh yeah, the guy whose yard it was dumped in had a pre-vanity 2x2 callsign).

Okay, that last was a hurtful dig, I'll admit it. I truly CAN recognize that....looks like quite a few others around here!

Not exactly. Bash effectively stole the test just as students steal a test from a college professor.

>I suspect more people were upset over
>what he did, rather than what, if any, impact he actually had.

There was a time when stealing a test was considered immoral. People reacted to that perceived immorality.

>In the end, the FCC never went after Bash which certainly
>suggests the FCC didn't expect to win

Phil, our retired FCC man, says it was a political decision. He certainly could have been charged. That he wasn't doesn't prove that stealing a government test is right...

>of the material in the ARRL License Manual.

If that is true...

Your logic still escapes me. If the ARRL license manual was proven inaccurate and too tough, shouldn't people have been mad at the ARRL for a faulty license manual instead of the messenger Bash for discovering it??

>If the FCC had had
>100 different random exams covering all the material in the ARRL
>License Manual, there probably wouldn't have been such an uproar.

Don't think so. The uproar is the same as that caused when students steal a professors exam paper and make the questions and answers available to themselves and other students, in an effort to pass the test without actually having to do the work of learning the material...

Thank you Larry, that was exactly what I was looking for. I'd
'browsed' through a few other times and kept getting sidetracked
by other interesting stuff and never saw the link.

Even took two exams while I was there and did 84 & 89% so it
looks like I'm ready, although I now have a better idea what my
weaknesses are too. I'll brush up on those and take a few more
practice tests between now and the next testing session (I
missed the one last night due to other obligations!!!)

Now I can start looking at all the equipment catalogs and
figuring out what will be a good starter rig.

Adam,

The purests in the group may disagree, but I've used a G5RV, various dipoles (folded, trapped, etc.) and I'm not a big fan of multi band dipoles. Any of these have to be cut to the right length and have traps installed or you need a tuner. Traps can be very lossy. A tuner does not solve the problems of transmission line loss and you often end up with the transmission line radiating a good portion of the signal (and not in the direction you wanted). G5RVs are very prone to this as it's part of the design.

Lately, I've had a great deal of luck using a coupler at the antenna feedpoint. The automatic coupler matches the impedance of the antenna to the transmission line. Minimal line loss, no feedline radiation and no "hot" metal in the shack. The down side is that the coupler is an active component and probably has a higher failure rate than very well designed and built passive traps (but I have had no failures yet). Operation is simple and automatic.

I use an SGC SG-237 coupler. It can be used with any radio up to 100w output from 80 to 6 meters and just about any antenna configuration you can think of. I assume that other manufacturers make similar devices, but the SGC seemed to be the most universal and the simplest to use when I did the research. SGC has a website at http://www.sgcworld.com that has a lot of info. It's not the best laid out site so you may have to poke around a bit to get the info you need. The coupler costs about $300 but your antenna costs plummet to the price of the wire and some simple insulators and support lines. A tuner and antenna could cost you less or more, but for multiple frequency use, I've been getting better performance from the coupler and a simple loop, dipole or vertical.

I don't mean to spend your money, but I thought you'd like this info. There are lots of ways to get your signal out, the important thing is to get as much in the direction you want as possible. A well matched antenna is more effective at transmitting _and_ receiving and will make more sense than a big amp in your ability to make more contacts. So get your antnna to work at a high level of efficiency and you can save lots of money you might otherwise spend on high power equipment.

In any case good luck and I hope we'll meet on the air.

73,

Lonnie N2EXU

Ahhh, you must have learned the hard way. Eight is kind of old for you to have still been using your pacifier though. At 8 I was building crystal radios and hanging long wire antennas up on the roof. Picked-up KFI loud enough to drive a loudspeaker with it! At the time I didn't know that shouldn't be possible. I hooked it up to the phones too. It competed nicely with the dial tone. :-) Little did I know that 34 years later I would get a ham license.

But it does sound like you want to hear that the Handbook is crummy. It has it's faults, but as a useful radio reference it's pretty good. The thing that's nice about it is that if you're interested in learning something about a particular radio related topic, there's a good chance you'll find it discussed in there.

Pretty good list. Four outa 5 ain't bad. Why include the Masons .. most of them have jobs. They've even been known to help widows and orphans a lot.

Yes, I'm aware of the religious implications. Also aware of the fundamental Baptist preacher whose crippled son got helped at a Shriner's hospital in SC. The "boy" is all grown up now. And he can walk normally. And it didn't cost his parents a dime. Probably hundreds more stories like that.

So for now, dip the rest and let the Masons go to work tomorrow. Dip Reno in a septic tank as a memorial gesture to the babies she burned at Waco.

Actually the term "Antenna Tuner" is a misnomer, unless it is used at
the ANTENNA FEEDPOINT as described above. A Antenna Tuner used at or
near the rig is actually a impedance matching device, and/or a jumper
tuner. Now for the antenna tuner debate.

Thus if Unibashers go from A to F there must be six classes of
Unibashers. Hans doesn't see why Hams might need more than three
classes, but he has given Unibashers the distinction of having six
classes. It has always been my philosophy that Hams rate more than
Unibashers AND....
Hams need MORE license classes,
Bob Wex w2ilp (Ignore Loco Polybashers)

If you wish to suceed as a jester, you'll need
To consider each person's auricular;
What is all right for B would quite scandalize C
(For C is so very particular);
And D may be dull, and E's very thick skull
Is as empty of brains as a ladle;
While F is F sharp, and will cry with a carp
That he's known your best joke from his cradle!

--W. S. Gilbert--

I was going to make a parody on Gilbert's above
poetry and relate it to the grades of Unibashers
but even though "Unibasher" rhymes with "Moonie-
flasher", I have decided not to. After all
we need to quit jesting sometimes and get some
dignity back to these rec.radio.amateur posts.
Determining what type of Unibasher one is, is
not on any Ham test...although you might have
to recognize the symbol for a unijunction
transistor. Thus Unibasher classification
is in no way a part of the basis and purpose
of Ham Radio and I declare it off-topic.

A couple of points - I don't know if your "welfare" upgrade was a brand new General or Extra, but remember that EVERY upgrade to General - with or without a 13-wpm code test - is brand new to the HF world. Some are lucky enough to have guidance from Elmers, or are smart enough to listen to good operators for a while before jumping in. Many, though, have no idea about the etiquette, conventions, and accepted operating practices in this new neighborhood. A 13-wpm test never did magically confer this knowledge and experience.

As for welfare Extras with no previous HF experience - this is pretty much a new phenomenon. We have to get used to the fact that some of them may have the naivete and inexperience of the classic new General. This is only temporary and they, like the millions of hams before them, will grow into skilled operators if given a hand and half a chance.

As for your CB cowboy ("Whatt're yur numbers, Good Buddy?"), it seems to me that I recall hearing the term "Lid" long before the advent of restructuring - this is not a new phenomenon. If he is just acting out of ignorance, help him out and set him straight. If he simply doesn't care about good practices (nothing new in the world of amateur radio, vis. 20 meters today <g>), just don't work him. He'll eventually get the hint - or he'll drop out from sheer lack of attention.

Also be aware that in some parts of the country, where "Church and State"
issues are hot, like back in the People's republic of Iowa, my folks Church
could not have a Church function in the "Public Library" so, the local
Masons said they could have it in there community center for FREE, as long as
they cleaned after the fucntion. So, I guess all masons can not be bad, but
i'm still afraid of them.

n2ey@aol.com wrote
>The use of "we" in that context refers to "the rig and I".

Ham radio grew up around broadcast radio, and took some of it's traditions. Commercial broadcasters used "we" to indicate they were talking for the radio station and not just the announcer. Many hams did the same. Broadcasters had "on the air" signs that lit up when the announcer was on the air. Many hams also had these signs. Large broadcast microphones were seen at many ham stations with the call letters prominently displayed.

So some traditional jargon such a "we" is still around today, used mostly by old timers. I used it myself in the 50s and 60s on AM phone. I had picked up the habit from other hams. It seemed perfectly normal then. But jargon does change over time. It's unfortunate that the language police find it necessary to make fun of those still using it. It will die a normal death through disuse over time I'm sure, and other (equally silly sounding to some) jargon will likely take it's place...

(Remember the horror when the CB lingo started creeping in...)

Doc, If you want to extend the Fort Sumter argument to ham radio, one could say that our service/hobby had debilitated into strife.
Here, we don't have one Fort Sumter but a gathering storm which Riley has been empowered to stop.

> What took you so long Jim????????

That's how long it took me to finally hook up with some hams to show me the ropes. My elmers. Of course I wouldn't take much advice from them at the time - too proud I guess. But I give them the credit. I had plenty else going on before that - playing music, getting an education, building a career and a family, paying a mortgage...

When I was 8, there was a high school kid up the street who was a ham. His radio shack was like a magical place to me. I still remember the feeling. But I was just a punk to him, and he wouldn't give me the time of day. That's just the way kids are. I pursued learning about electronics anyway.

I knew another ham later on - in high school (don't know if Jeff Herman remembers him). But he got into broadcasting after high school, and I also pursued that thru, and after college. I think my high school physics teacher was a ham also. He had some kind of a transeiver in his car I recall. Hey Jeff, did you have Don Schwinn for physics? ;-)

On the rare occassion that I bother to listen to 14.313 I heard David,
THE INCREDIBLE SHRINKING BRAIN, trying to stir up the crap once again.

It seems he thinks that its illegal for a licensed ham to allow an
unlicensed person use the ham bands under the "third party rules".

He makes the case that Bob (W4RCL) drove up to visit Rich, EX
WB2OTK/W2OTK. And that Bob fired up Rich's rig. Of course the
transmission was identified as W4RCL.

Lets hear it guys, this should break the posters record. But give me a
couple of days....I need to buy another Kevlar vest.

I would agree with you there! Wholeheartedly! It makes as much sense as
someone who "picks" on another's spelling during an argument! Language police,
indeed!

How 'bout when someone says, on the air "turn my house around" (meaning they
are going to reorient their beam antenna)? I remember a near vocal fight that
broke out here on a local repeater for someone "daring" to use that term on the
air. Why, it was nothing short of a CB term and did not belong on ham radio
(the insulted's words, not mine...) : /

Keep away from Masons, Lloyd. One will eat you. Oh yeah, they're really
something to fear. Why do we fear people? Because it's easier than
understanding. I never met a bad Mason in my life except a dopey one named
Wesley Woe Woe Cue. Lloyd fears Masons and yet he comes from Iowa which has
a city named Mason. They allowed his rightwing church to hold a function and
he still loathes them? What's with you N0VFP?

Apparently, because at the time. the FCC was too lazy to create
more than a couple of exams. Some questions in the License
Manual apparently never appeared on an exam. Apparently,
Bash uncovered that little secret.

And the all-time best selling book, the Bible, didn't consist of
the same edition throughout all-time, either.

The content of updated editions of technical books are expected to
change. You know that.

wolf <wolfalsoNOwoSPAM@hotmail.com.invalid> wrote:
>Re: The "Dear Abby" column for 19 April concerning a Morse
>Telegraph Club.

For its last 40 years, Western Union provided a special Morse circuit for the Morse Telegraph Club to honor the OTers. It connected 36 US and 4 Canadian chapters of the club. A member could dial in and with key and sounder, carry on QSOs with other members. That line lasted until Western Union closed in 1989; then the club established a dial-in modem for members who wanted to work Morse with key and sounders via their PC -- kind of a nationwide party line.

>How old would a railroad or Western Union
>retiree be to have actually been involved in telegraphy?

Landline Morse was finally phased out over the AP news wire in 1930. But lots of today's landline Morse enthusiasts never worked a wire. It's become a hobby for folks of any age.

>Too, landline and radiotelegraph Morse are/were different,
>so how did hams become involved?

Landline operators used American Morse while hams use International (also called Continental) Morse. American differs from International by eleven letters:

C: .. .
F: .-.
J: -.-.
L: long dash
O: . .
P: ....
Q: ..-.
R: . ..
X: .-..
Y: .. ..
Z: ... .

The numbers of American Morse are:

1: .--.
2: ..-..
3: ...-.
4: ....-
5: - - -
6: ......

7: --..
8: -....
9: -..-
0: a very long dash

American Morse (above) was used on American ships until 1912, when it was replaced by International Morse, which was in use on the ships of all other nations.

>
> WHAT? It's not really that old???

No, it's not. It's a CW/SSB transceiver, with performance numbers that
are not much worse than "modern" rigs. It lacks only a few features
(split/RIT capability, CW filter, AGC off switch, slow tuning rate)
that I consider really essential. The later SB-101 and SB-102 have
provison for a second VFO and a CW filter.

2047. FS: Collins 75A-4 & KWS-1

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-20 00:00:00 UTC
From: gharmon@idworld.net
Message-ID: <38fef141.210862128@news.idworld.net>
Source record: 113392

Hi everyone,

I have a set of Gold Dust Twins (75A-4 and KWS-1) for sale.

The receiver and exciter look really nice and have minimal cosmetic problems. There are some of the little nicks across the top front panel
edge of the receiver.
The power supply cabinet needs refinishing.
Original manuals.

75A-4 Receiver......
Serial number 2518
Chassis date 7/18/58
Works well
Extra BNC and trimmer adjustment hole on rear
Standard SSB filter
Collins 4:1 reduction knob
No speaker
$1,250 OBO

KWS-1 Exciter......
Serial number 168
Fresh 4X-250B finals
Partial alignment done
Checked out on 80 meters
Collins 4:1 reduction knob
Needs a piece of rectangular glass on the front panel

KWS-1 Power Supply:
Replaced four capacitors
New HV cable
Wired for 115V
PS to exciter cables
Fresh 866A HV tubes
Blower fan bearings replaced
New air hose
100V AC antenna relay included (requires DC relay)
Inside of the power supply looks great
$1,750 OBO

Would consider a nice SX-115 or SX-28A as partial trade.

Can take the twins to Belton on 29 Apr for serious examination and purchase.
Would also be willing to drive a reasonable distance for delivery.

Here are some pictures to review. Please contact me on the telephone
or
email for additional information or more pictures.

Huh? Did I miss something here? Every time a Novice or Tech posts here, you old "I've got more Time in the Latrine" bunch jump on it and call him stupid. Oh, you want anecdotal evidence of stupid Novice's and Tech's?

OK, there was the time a new Tech was asked to give a long count so the guy on the other side of the repeater could check his SWR. "One, two, three, four,..." And it was on 1 April. Sad but true.

Or the time a Tech was repairing the finals of an Extra owned repeater, after the Extra botched the job. My initial impression was "lightning?" But the Tech said no. Looked like he had tried to use a propane torch or a butane soldering iron or something with lots of fire.

Is that balanced enough for you? The problem is, we can expect the Novices and Techs to make newbie mistakes. But those old licensing exams sure let a lot of imbeciles upgrade.

LRod, I stand corrected - I went and re-read the pertinent text and you are indeed correct. Still and all, this is really only true in the world of electronic keyers. Sending clean and well-formed characters with a straight key at any decent speed is still a separate skill in its own right, requiring considerable practice - and not necessarily inferrable from the fact that the student can copy at the required speed.

I remember when I gave up my old Navy straight key for a dual-paddle iambic setup (something like 25 years ago???). My code was much cleaner and more readable, as I was never a great artist with a straight key, but I had to endure the chiding of more than one older ham (who made caustic comments about electronic keyers and "Real Hams" - I guess the more things change, the more they stay the same <g>).

<snip>

> here or a letter there, if he got the other op's,
> call, report, name, QTH, rig, antenna, power,
> weather, etc., correctly?

I agree. I wasn't trying to criticize the changes, only to make the same point that you just did - namely that real world communications issues are the major driving force behind the standards that the FCC and various international bodies use in determining Amateur Radio licensing standards. And the big change in real world communications issues in recent years has been the virtual abandonment of CW for everyday as well as emergency use by virtually all of the commercial, maritime, and military organizations of the United States, if not the world, in favor of modern digital and satellite technologies. Hence, its de-emphasis in the newest round of license restructuring.

The FCC no longer sees any need to maintain a large civilian pool of CW operators for times of emergency or war - ergo, no need to test for CW prowess or encourage its development.

> I was the beneficiary of such enlightened administration.

So was I, in my first incarnation as a ham 3 decades ago. And I do remember some of the old guys, like my father's old friend who Elmered me, who were sometimes disparaging of us for the easier tests, the store-bought rigs ("appliances") and antennas, and the growing populatiry of electronic keyers .

2054. AF2Y: a dip for restructuring

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-20 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8dmv81dpl1@slb1.atl.mindspring.net>
Source record: 113399

I just heard on CBS news that Elian Gonzalez passed the Extra yesterday afternoon at La Tienda de la Familia Caramba in Little Havana(Habanita) Miami which is another reason to keep the kid here. Undoubtedly he'll be assigned callsign A4A.
I worked another "welfare" upgrade who told me to give him my "numbers" instead of callsign. Congratulations FCC & ARRL. "Maaahvelous...simply maaahvelous."
Tonight begins "Pesach" which is known as Passover by Gentiles. We have a dinner called a "seder" in which we remember the eviction of Moses and his people from Egypt for not paying rent. After wandering the desert for forty years without portapotties or Charmin, two greenhorns broke away and somehow came to what's known now as southern California. At the top of a peak that resembled Mount Sinai, they looked down on the greenery as one asked the other, "So, how do you THIS place?" "Van Nuys, van nuys" was the reply and that's how it got its name.
A ritual during the seder is to dip a finger once for each plague God wrought on Pharoh for keeping Moses and his boys in bondage. Like, dip for locusts...dip for frogs....dip for hail etc. Since I am a proud American who reveres this country to the utmost, I suggest we begin dippping for the plagues now being exacted on this beloved nation. One dip for Jerry Falwell...one dip for Jimmy Swaggart...another for Pat Robertson...a dip for David J.Smith and so on and so forth.
14.313 is so boring it's getting to be unworthy of SWLing. I hope Mr. Hollingsworth is satisfied. Oh yes, two more dips. One for enforcement overreactance and the other for restructuring. Happy holidays to all!
Doc,AF2Y

Doc,

I think you misread my intentions - or perhaps I was not articulate enough (and I apologise for that). I am not trying to cause discontent, but to encourage some of the hotheads out there to remember when they, too, were new hams. I'm trying to encourage them to be as tolerant of today's "new hams" and the long-time Techs and Tech Pluses who are only now upgrading, as the previous generation was of them, when they, too, took what was arguably an easier path than their own predecessors were required to walk.

As for going the 'dumbing-down' route - I am in full agreement with you. I would only point out that this is not a new and sudden phenomenon - either in radio or in society at large. When I remember the discipline and rigor required of me as a student from elementary school through college and graduate levels, I am heartbroken at what has happened to education over the last 30 years.

I agree that the new hams should be welcome and encouraged. When I first got my Novice license in my earlier incarnation as a ham, my first QSO was with an Extra who worked my shaky 5-6 wpm QSO with infinite patience, good humor, and much encouragement. Later, as my own speed and operating skills increased, I often went back to the Novice sub-bands and tried to return the favor. When I first upgraded to General and ventured nervously out into the phone sub-bands for the first time, I was helped and guided numerous times by older, more experienced hams (some Generals like myself - though with many years of experience - many others with higher tickets). They were almost to a man, unfailingly friendly and encouraging - teaching and not criticizing. THIS was the spirit of Amateur Radio that first attracted me to this amazing hobby.

Today's new low-code Generals are entitled to the same consideration that we all once received from the "Real Hams" of previous generations. Ironically, many are probably far more comfortable with working voice (from VHF/UHF) than I was when I first upgraded to General, since I was restricted to CW on HF as a Novice and had never even keyed a mike before getting my General.

Today's low-code Extras may well have received permission to enter the gateways of the exalted Extra and Advanced subbands in less time and with less overall effort than their predecessors, but we should still treat them with the patience, kindness, and understanding that any new-to-grade ham deserves. If we do, they, too, will become skilled, experienced, old hands in no time.

2058. Re: OK to Sell?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-20 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <38FF07ED.F7BA1DA7@ix.netcom.com>
Source record: 113403

That post about sale listings being forbidden anywhere except
rec.radio.swap is totally bogus hogwash- absolutely
false propaganda posted by someone who wants *you* to
obey *him.*

There is a certain small, yet vocal minority who have decided
that *they* are in charge here, and you will post only what
they say is acceptable, by God. Well, they only have
power over you if you give it to them.

Don't be fooled. Don't be lead around like a sheep.
There is no such thing as a "charter" that covers everything
under the rec.radio hierarchy. If a charter for "rec.radio"
was written, it applies only to the now obsolete and defunct
"rec.radio" group. Each subgroup has its own
charter and many of them allow sales. And don't let the
control freaks tell you that excludes auction sales-
no such distinction is made. They *love* to demand control
over you on that issue, pouring out more lies and misinformation
per second they you get from a Clinton news briefing.

Remember that just because someone posts it here, it
doesn't make it "law." Some people demand that
you obey *them* or they have a fit. If someone
harrasses you for posting FS or FA on a group that
allows sale posts by charter, -THEY- are in the wrong-
not you! Report them to their ISP and you can get
action. I have a couple of scalps from this myself
and these wanna-be cops don't bother me anymore.

Read the individual charters yourself and make up
your own mind. If a charter says anything like:
"casual sales or wanted are permitted," it means
exactly what it says. You don't need some guru to
take you by the hand and explain it to you according
to *his* bigotries. Common sense will guide you better
then some self-appointed Usenet cop. Sales are allowed
in some radio groups (boatanchors, CB, etc.) and not
in others (policy, misc.). A chimp could figure it out,
assuming he hasn't swallowed the control freak's nonsense.

Good Luck and Kind Regards,
Dave S.

p.s. Sit back and watch. You can identify the people
I'm talking about by who responds to this thread.

The ones who scream like a raped ape are the most entertaining.

What's so faulty about it, Aaron? Like any other commencement cermony or 'rite of passage' it is condensed kraut served up to the initiate with appropriate words of great gravity from the Grand Poobah. It is only to be hoped that the initiate finds his way back to the library to begin his real education. Testing at best is an educational tool (here is a map, find the library) and a demonstration that someone has in fact found the library before so it is not impossible to find it again. Beyond that you are asking too much. The only critique I have of the present exams is that they are too short to have the proper aura about them now that we can no longer depend on the steely-eyed FCC to scare the initiation candidates witless and CW to give that sense of chasm-crossed. Maybe we should dress the VEs in proper uniform, like East German Grenzepolitzi (border police) if we can still get them the old uniforms cheap.

I apologize for this remark. I neglected to account for a history that
wasn't reflected in the documentation to which I referred.

> If that's true you're in for a short and unfulfilling time in ham
> radio.

My only salvation (not enough) is that I qualified the remark with "If
that's true."

Things are not always as they seem. I'm sorry.

>
Because they are electro-politically incorrect.

Here's a dumb Novice post:

When I passed the Novice test, (1967, age 13) I spent the time waiting for the license to come by building a transmitter. Simple 6V6GT grid-plate oscillator, ten watts input on 80 meters, link coupled plate coil wound on an old pill bottle. Antenna was a wire out to the apple tree behind the house. Impedance matching? No clue. Tuned the oscillator for a dip in plate current and a peak in the receiver.

So when the license came, I went on the air (no, I did NOT try tuning it up before I had a license). And proceeded to work - nobody. For a coupla weeks I didn't think anyhting could be wrong with my setup.

Finally did some more reading of the Handbook, and realized there wasn't much soup getting to the antenna. Put an old variable cap from a junked BC receiver in series with the link, and a pilot lamp in series to the antenna to measure RF current. Did the "dip and load" gig for maximum bulb brightness. End result - lotsa QSOs.

The important thing is not what mistakes one makes in ham radio but what is learned from them. Making a mistake is excusable - repeating it is less so. Experience varies directly with equipment ruined. The only person who doesn't make mistakes is the one who doesn't do anything at all.

Historical note:

Years ago, the exams included all sorts of questions on oscillators, band edges, filters, regs, and power supplies - but almost nothing on antennas and transmission lines. (See old LMs for verification). The

FCC figgered that if you didn't know much about antennas, you wouldn't hurt anybody else - you just wouldn't make any QSOs. That's one area wherethe new tests are BETTER than the old ones.

>
>I will leave it to those few who are still following this thread to decide
>the truth for themselves. Unlike some, I do not feel a need to proclaim it
>for them.

I will note again the THREE relavent aspects of why there
is so much acromony on this subject.

1 - The tests are really no diiferent today than for
almost the past 50 years...AND
2 - The knowledge one needs to be viewed as
a "gee-whiz" technical type FAR exceeds what
one needed in the past...AND
3 - The equipment today is far MORE complex,
far smaller, far more integrated, and usually
software dependent than almost anything we
were using 40/50 years ago.

Becoming a real "technician" today involves
considerably more than just a ham license.
Indeed, the "front-line" techs today are more
just "black-box" changers and circuit board
swappers. They do NOT fix anything as
we did 40 years ago.

Reality, what a trip:-)

Cheers,
Bill K2UNK

Yup, even in a two year tech school we had "electives"
which gave us options as to some specialties we'd
prefer to study vs the general knowledge which
was a requirement.

Can I throw in mine? 'Orientated'. It actually is a word -- means to be pointed East.

Dick BK

No, you probably live in a bread truck, or a reasonable
facsimile therof, and have no life apart from ham radio.

My guess is your a cheap old bastard who lives off of fast
food and goes from hamfest to hamfest selling castoff junk
as your primary source of income.

Specifically, the gypsie bums I see at hamfests
who have a vanload of so much useless crap they think
someone will pay money for. They use stolen plastic milk crates
to cart and pack their shit into, and can't see outside of
their passenger side or rear window from all the junk they've
packed inside. Such bums often wear 10 year old clothing
with holes in them and smell like the inside of a public
restroom on the Interstate - sans Lysol of course..

Tell me fruitkake... When was the last time you:

Took a bath, cleaned up all the shit lying in
your yard, cut the grass, did not use a
piece of rope for a belt, ate a healthy meal,
had an optimum BMI for your height, made
a good wage, managed to hold a real job, cared
less about being embarassed by farting loudly
or belching in public eateries, visited a dentist,
did not have 8-HT's hanging off your rope-belt,
cleaned the refrigerator on your front porch,
called up to have those junk cars removed from
the yard .....

Have fun on the repeaters! WTIA

I agree completely! So what is your point. You was talking about
"welfare extra"
not knowing to say over. I just pointed out that nothing in the testing
tested
for that. Therefore your point of postings this whine was illogical.
There is no connection between your whine and restructuring except in
your mind.
You was just looking for a reason to pick on the new Extras.

> which ameliorated the entire situation. Tell me "Wags," did you find copying
> 5 wpm of code, tough?

Not really, just a total waste of time. Learning code at 5 or 45 WPM
doesn't
help me or the hobby and isn't fun. Therefore it is a total waste of
time.
What is funny is I thought when I got into ham radio code testing was a
good
thing. Unlike many I read the postings from the pros and cons on code
test
and found that the non-coders had a very logical reasons for it not be a
testing requirement. pro-coders had either illogical or outdated
reasons
for hanging on to the code testing requirements.

This is not to say there isn't a reason to learn code. There is lots of
reasons to learn code. It is just illogical to be a testing
requirement.
Today no one has been able to give me a reason that holds water why
there
should be a code testing requirement.

I built a G5RV from specification founds on the WEB. Drilled PVC
makes good insulators, 102 ft wire center feed with 34 ft of 450 ohm
ladder line connected to a 4:1 balun and 50 ohm coax to the tunner.
Use with an antenna tunner and it works nicely on all 5 bands.

2092. update

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-20 00:00:00 UTC
From: KC8JBO <kc8jbo@my-deja.com>
Message-ID: <8dlig2$rg6$1@nnrp1.deja.com>
Source record: 113455

Hi guys, just writing to let you know that after sustaining a thorough beating in rec.radio.amateur.misc my adopted, retard son Pitbull is gradually doing well
with solids and the doctors think it is time to start some finger foods. It's a little terrifying for me though, I'm so afraid of the little blue lipped chimp choking! He has recovered up to the point that I can feed him vanilla wafers and graham crackers turned into mush that he mostly sucks out of my hand. You should see him bluegumming away and mushing up pieces of canned peaches and pears!!! Please forgive him his erratic lewd behavior, I think it must be an effect of him being a dumpster kid of a subhuman crack whore. Well, I've got go, must mush up some Cheerios and Ritz crackers!

I agree about feeding trolls Chris, but my local police force makes public announcements once in a while on their
main frequency. For example:
"Attention all scanner listeners. School is closed today because of the snow"
There is no reason for privacy on the police band in our town.
The police have access to cell phones for sensitive private communications, when needed. Detectives use scrambling
on a very rare basis, and patrolmen use pay phones if they are not equipped with a cell phone for sensitive stuff.

TThat's around the time I was in college. At the ham club one of
the members was taking down the W2AU balum. "It reads a short on
the ohmmeter". I said "It should". He: "No, it's bad". I'm
not good at arguing, so I said, "give it to me if you're gonna
throw it out".

I was a Tech, he a general or higher.

>"Technical" does not define competitive. Were they good or bad?

You still don't understand so I'll spell it out for you: In 1970
Time Magazine presented the all-time best sellers list, divided into
fiction and non-fiction. Toping the non-fiction category was the
Bible. The *only* technical book listed as the all-time best seller
in the non-fiction category was the ARRL Radio Amateur's Handbook.
The "competition" was all other technical books published for all
time.

Do you understand now?

Jeff, he's just another cop wannabe. Their whole focus in life is "being in charge." Notice how he weaves that into every one of his posts about comm practice. He wouldn't last five minutes in intense real communications, something I did for a living for 30 years. I'll bet his favorite transmission starts with, "be advised..."

> upgraders...

No, the irony is that there are people who actually believe that any more than a sad, deluded few ever upgraded to "show their 'superiority'" over anyone. Upgrades were and are about personal commitment and personal achievement. They were and are about deciding that something (additional priveleges) was/is worth working for and then doing it. Or (maybe "and" in some cases) not feeling that they were/are finished progressing in their endeavors until they had/have attained the most difficult license.

The few that did upgrade for "bragging rights" soon found they had gotten there for all the wrong reasons and there was little satisfaction for having done so.

> Of course, those who upgraded to Advanced will still have
> dubious 'bragging rights' as there will be no more new Advanced
> licenses under the new restructuring.

See above.

> But, if they ever want to be Extras, they will eventually have to
> swallow their pride and accept a no-code upgrade someday.

Depends on why they want to be Extras. If they want it for the reasons I stated, they won't hesitate a second. If it's a "macho" thing they won't bother.

> Since I doubt many of today's Advanced really want to punish
> themselves for the FCC's doings by denying themselves the satisfaction
> of ever reaching Extra, its only a matter of time before they, too,
> will be welfare upgrades.

If it's a matter of satisfaction, they may decide that the more difficult to achieve (yesterday's Advanced versus today's Extra), and rare license is more than enough.

If they want want the priveleges, they'll be at the next test session.

> ROTFLOL

Darned if I can figure out what's funny.

> 73 de John / K2INY

Unless it's a 6 week old Tech Plus with a vanity "old-timey" callsign
trying to sound like an old time sage. That sounds like someone with
"bragging rights" disease.

If that's true you're in for a short and unfulfilling time in ham radio.

>73 de W5TIT - Kim

For all time? Since the beginning of book publishing all technical
books were bad? That's what you're really asking.

Again, in 1970, Time Magazine published an all-time best-seller list.
The only technical entry on this all-time best-seller list was the ARRL
Handbook. It was in good company -- the Bible and Dr. Spock's book were
also on that non-fiction list.

I suppose such news really grinds League bashers, eh Kim?

Ahhh, don't worry about the "chip" in your car unless you piss off the
mechanic. I work at a Ford dealer and damn near every 5.0 Mustang that
has the "used" look has been moded. Take care of they guys that work
on the car, and for the most part they will not turn you in for it.
NOW if a rod goes through the side of the block, and the tach is stuck
on 14,275 rpm, they just might get upset with you.....<BG>
But otherwise don't worry about it.

Yes, at this time of year we realize that despite some mistakes, the man's done a nice job. Why? Do you remember just a few years back when anti-Semitic KV4FZ and his loco Nazi nut friend, KA4MUJ, used to get on with their own twisted and demented Passion plays, beating the drum against Jewish kosher hams etc? Herbie used to egg on the idiot and the Fort Lauderdale puppet would dance and flail away each time Herbie yanked a string. Some of the most hideous anti-Semitism came from the orifice of MUJ while encouraged, nurtured and sponsored by the Virgin Islands despot. IT'S OVER! Yes even I had to pay a price but IT'S OVER and I'd do it again and so would Rich and Douglas and everyone else who stood up to those monsters and with the help of Riley, BURIED THEM! Now the conjunction of the Passover and the Easter is a time for reflection and understanding on ham radio instead of one for recrimination and hatred. I'll bet my last buck that if someone came on .313 spouting off religious and racial hatred, Riley would have him off and quick. It took a long time for the FCC to act to stop the religious intolerance heard daily on .313 and by God almighty, IT'S GONE. Thanks Riley!

Well, for hahas, I printed one at 800dpi on a tek phaser 360 printer.
With a loupe, it's possible to read the text, but at that magnification,
the dots that make up the colored bars are a distraction.

Part of the problem is they're putting so much information on one page,
that even if you could print it at actual size, (42 by 26.88) the type
would be smaller than you'd use for a normal letter.

Perhaps the Government Printing office sells copies of this chart?

Actually, I always figured that Bash was how he got his license.

Ever notice how it's the marginally-capable who scream the loudest in this sort of discussion? Clearly, he knows that he barely made it and thus anyone who makes it with less effort is to be reviled.

The problem is that Seymour-see less-still a putz KJB has this obsessive hatred of WB2OTK while Rich thinks of him as a Seymour- see less- putz. He's ancient and angelic who gets his jollies from gossip since his wife is as ancient as he and Viagra is useless. What ticks me off about Seymour is not that he's a gossiper because I am the same thing on the Internet but rather his preposterously reticent attitude about not becoming involved which he actually lives for. The juxtaposition of meddling, rumor mongering, sarcasm and troublemaking cloaked in the mantle of innocence, naivete and indifference. WA9KJB has always resented Rich referring to him as braindead which isn't true. Just the cerebral cortex is missing. At any rate I find Seymour's act to be entertaining and everytime I hear his routine I think of Sinatra's famous ballad, "Send In the Clowns."

I apologize for accidentally resending this post. To get online the modem dials into a Wayne, New Jersey number which had been faulty most of the day. We have been getting severe storms in North Jersey and when I called MindSpring I was told that an entire grid had been taken out which explained the on again-off again business. What happened is that the original post through Microsoft Outlook Express went into my OUTBOX instead of being launched as SENT MAIL and when power was restored, it took off twice because I had diddled with it twice before calling MindSpring for an explanation. I know that reposting is a no-no and hence an apology is in order. Finally if one doesn't want to accept my apology, stick it where the sun don't shine. AF2Y

I have an old Philco radio model #46-480. I would like to find out how much its worth but don't know where to look. It's a stand up type that receives AM. FM and shortwave 9.3mhz to 15.5mhz. It's the type you see on the Waltons TV show.

I thought I remembered an article in QST a couple of years ago about someone in Maryland that restored these units, but I couldn't find the article.

If someone could direct me to some info or somebody else that might know, it would be most appreciated.

Thanks all.

Understanding is not a condition of the law. Only making to the U.S. shoreline
is.

>and was a good reporter.

Insider trading is similar. You get somebody on the inside to give you the company secrets, and then use the illicit information to make a profit on the stock market. These days that will get you a few years. But of course it's not stealing...

>Was there ever a time when having a good memory was immoral?

Depends on what you've been reading... :-)

>That he wasn't probably means that the courts would not have
>considered it to be theft.

You'll have to ask Phil. I doubt that Bash would have been charged with theft. More likely something federal sounding like obstructing a testing process (a made up example). That It never got to the courts doesn't mean no laws were broken. Phil said it was a political decision (not legal decision) not to prosecute if I remember right...

We agree that Bash was not prosecuted. Was that point ever in question??

>[we can] Specuate all we want,
>but there is NO absolute answer now, nor will there
>ever be.

I think the original statement I made was that I thought that the uproar was because most people *thought* that what Bash did was immoral, unthinkable and illegal...

Do you remember any large group of people, say the ARRL, defending Bash for doing the moral legal thing by stealing the FCC tests and publishing them for profit...

>that you can be accused of doing so by a college proffessor.
>Copyright can be used to protect the college proffesor's test...

When has a student caught for stealing a test ever been prosecuted for a copyright violation? Expelled maybe. Copyright? Not likely. My analogy may not be perfect, but it's pretty close. Stealing a test, by whatever method, physically or fraudulently, is wrong. That's what the uproar was about...

>that didn't make it illegal...
>That's what makes for court decisions in the first place.

I can cite you many examples of people who break the law and are never prosecuted in a court. They have broken the law nevertheless. That Bash was not hauled into court is not proof that he didn't break the law...

That chart is included once a year in "Communication World" and
several other communications industry house magazines. I work
for a Cable company and we post the new one each year on our
head-end door. We fight over who gets to take the old one home.

If you work for a phone company, cable company, cell company,
or any other such business check out the house organ magazines
laying around the office. It will be in one of them once a year.
It folds out to about 36 X 42 inches.

You can also order it somewhere....A government office I think.

From: w4th@webtv.net
Message-ID: <18890-3900E1AF-1@storefull-107.iap.bryant.webtv.net>
Source record: 113220

I have on ebay a matched set of Svetlana 4cx800a tubes. These tubes have never been used, and carry a 90 limited warranty from the Russian distributor. The tubes are Soviet military surplus, and are built to their very rugged specifications. The following amps use this tube. Alpha 91b and 99, QRO 2500, Acom 2000, and the new Emtron from Australia. These tubes are also a good conversion tube for the MLA 2500 Dentron that runs the impossible to find 8875 tubes. There is a conversion on the Svetlana website for the MLA 2500 using these tubes. I have a picture of one of the tubes on the auction site. If you want a steal on a great pair of tubes, go bid on these. The current bid is only $200.00 and a single tube like this sells for $179.00 at RF Parts, and they don't even offer a matched pair. So someone will walk away with a steal on these tubes more than likely. Maybe it will be you!

We (FCC staff members, both attorneys and non-attorneys) who cared enough about the matter were convinced that the problem was that the now-deceased attorney who would have had to bring the charges was just too damn lazy to do it.

We disputed the case heatedly with this person and at no time was the phrase "you don't have a case" used - it was "I'm not interested" which we knew was code for "It's too much work for me to do anything about it". We had been up to that plate before.....

Very personalized - and demoralizing. 'Nuff said.

I strongly disagree with your comments quoted above.

Many of the mailings lists that are part of the current rec.radio hierarchy can trace their origins going back to 1972 or even earlier!

The rec.radio.shortwave newsgroup was voted on, approved and created in 1989.
(Again, before Webtv was invented)

In 1990 and 1991 there were reorganizations of several radio related newsgroups. This was done after group members discussed, voted and approved the reorganizations, charters and faqs.

In 1998, there was straw poll to see if there was a desire to modify the charters and/or the rec.radio newsgroups. The members are very happy with the CURRENT charters and faq.

I have been a member of the mailing lists that preceded the current rec.radio newsgroups since 1985. The mailings lists STILL exist today for all rec.radio newsgroups except for two groups. (rec.radio.swap is one of those two non mailing lists groups)

BECAUSE the mailing lists STILL exist for all but two rec.radio newsgroups, I would hope that you can understand the the very real NEED to have charters and faqs.

The charters and faqs serve several purposes, including:

1. Protects the entire rec.radio hierarchy from commercial advertising.
2. Protects discussion newsgroups from FS and WTB posts.
3. Protects the rec.radio.swap newsgroup from "discussions" and only allows FS, WTB and FA posts.
4. Defines specifically what is on topic or off topic for the various newsgroups.

The charters and faqs are living documents, in the sense that they have been updated and modified at various times in the past several years.

In fact, the faq for rec.radio.swap newsgroup was just modified on April 15th!
(It is now defined how to post For Auction items in rec.radio.swap newsgroup)

The charter is posted MONTHLY for the rec.radio hierarchy AND the faq for rec.radio.swap.

Read the charters for ANY newsgroup before you post in that particular newsgroup AND/OR mailing list.

Doc,
The INS finally got around to doing what it should have
done almost 5 months ago. If they(INS) hadn't 'fooled' around
for nearly five months, in a false 'humanitarian' gesture, NONE
of this foolishness would have taken place. That the court
systems in Florida helped in this last five months of political
'making-hay', is shameful.
As for 'how' this 'raid' was carried out, I really don't
expect you to understand the 'mechanics' of it. Your not
'able' to understand because you have never been involved
with things of this nature(I don't think you have,at any rate).
From what little I know about the so called 'raid', it was
handled properly, and with restraint. There wasn't anyone
injured, was there?
I assume you've seen the photographs of the officer with
his finger "off" the trigger? If you've not had any of this
sort of training, or have never heard/read about any of this
kind of training, then I really don't expect you to understand
just what that 'finger' position meant. And I really don't
think it would do any good to try to explain, it's too much
of an 'emotional' issue to you, for you to listen to, much
less understand. It's enough to say that that officer was
as far from 'hurting' anyone there, as he could possibly be.
The grandparents/uncle/etc. had no 'right' to custody of
the child. The father DID have right of custody. This should
have been done a long time ago. Are the 'Commies' wrong,
even when they're right??(careful how you answer that one!)
As for the people who burn the American flag, I'm glad
I wasn't there. I don't need to go to jail, and I would have.
Paul

That runs counter to the ARRL's obituary of Art Gentry:

ARTHUR M. GENTRY, W6MEP, SK
The ham that gave each and every one of us the
ability to communicate over repeaters has died at
age 89. Arthur M. Gentry, W6MEP, passed away
about three weeks ago in Beaver, Oregon of natural
causes. Only a month earlier he and his wife
Millie, K6JJN, had moved to Oregon to be with
their grandchildren.
It was back in the late 1940's that Art Gentry
began experimenting with receiver designs that
would permit hearing signals on the same band that
a nearby high power transmitter was operating. By
the late 1950's he had developed the needed
hardware to put the first practical voice repeater
into operation from atop Mt. Lee overlooking Los
Angeles, California. Gentry's designs were adopted
by both the Amateur and Commercial Land Mobile
services and lead to a revolution in voice relay
communications that prospers to this day.
In addition to his developing repeater
technology, W6MEP also helped to pioneer the
technical side of covering breaking news stories.
One of his most significant contributions was in
the design of the KTLA Telecopter for Golden West
Broadcasters. This was the first remote broadcast
facility ever installed on board a helicopter and
is the fore-runner to the news choppers of today.
Bill Arens, N6NMC who has operated the repeater
for the past six years says that he has submitted a
request to the FCC to grant him special
dispensation. This, so that the callsign W6MEP can
remain on what is the oldest continuous operation
repeater in the world.

>their classes were presented to me as requirements. Those things that would
>enrich my learning experience were presented as suggestions.

I suggest to my students that they should do *all* the problems in each
section of a chapter that we cover in class. I suggest that they make
and utilize index cards containing definitions and difficult-to-understand
concepts, and refer back to those cards frequently. I suggest that they
begin an assignment immediately after class rather than waiting until the
day the assignment is due. I suggest that they begin studying for an exam
at least one week prior to the test date, and suggest they give them-
selves at least two weeks of study in preparation for a final exam. I
suggest that they arrive on time and not skip any classes.

These are all suggestions, but all are necessary in order to pass any
of my classes. Calling them "requirements" would entail enforcing them
-- something which could be a bit difficult ("I'll be visiting your
homes to make sure you've all begun studying for next week's exam.")

2173. New ham's POV on CW & April 15th Upgrading

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-21 00:00:00 UTC
From: Scott Verity KC2FBV <sverity@hoflink.com>
Message-ID: <sfvohhrcl6e136@corp.supernews.com>
Source record: 113237

Last year, I was fortunate to enough to discover the joys of ham radio. An instructor at the local club (Extra Class) was kind enough to welcome me into the Technician level class he was teaching even though the class was halfway through. Despite the fact that I'd missed much, he encouraged me to "keep plugging".
On April 25th 1999 (Marconi's birthday) I had earned my Technician ticket.

With his guidance, and that of the club's Vice President (General Class), I began emulating proper net etiquette. They have always been patient with me and have always informed me if I have made any errors. They've also been supportive of my when I've handled a situation properly (My first roundtable discussion comes to mind).

The General Class operator was kind enough to invite me to the club's station to operate HF while he acted as control operator (as per FCC requirements) during a CQ WW contest.

Neither of these hams have paraded their accomplishments in anyone's face. Although they are, proud of their earned privileges they are equally eager to share their knowledge and expertise with myself and anyone sincerely interested in learning.

In late March 2000, I was fortunate enough to take, and pass both my 5 WPM test and the General Class written test.
On April 15th, I was able to upgrade to a General Class License.

At first, I wasn't sure if I wanted to continue with CW ... but after the work I put behind just 5 WPM I found myself oddly attracted to it. I'm sure the CW operators remember that first magical spark when you don't hear dits and dahs ... but letters.
Well, it's happened ... though my copy is still a little like Swiss cheese on certain characters, I find myself listening to what CW transmissions that I can.

Personally, I'll never look down on those who earned their tickets before I did.
There's so much that I know I can learn from them and I will always be mindful of this.

Just because the FCC has lowered the license requirements doesn't mean we have to lower our standards of the challenges we can accept. I've been listening to faster, more experienced CW operators and though my copy gets rough at 10 WPM, I find myself improving slowly but surely. The club I'm involved with still has the old code test tapes (13 WPM and faster) and I'd still like to try my hand someday, when I'm more comfortable, to gauge my improvement in copying CW ... an unofficial test but a chance to see if I'm

un to the challenge.

I wish I'd come across ham radio while I was in high school ... still better late than never.
You won't hear any "10 codes" coming from this operator.

Thank you for your time & 73 to one and all,

Scott KC2FBV/AG

The insulted person is right. Why use phrases on-air that make no
sense? Why not speak plainly, and use straight, simple English?

I was NOT in favor of restructuring, however I find it very
interesting how so many people are badmouthing those who are taking
advantage of it. "They aren't hams", "They are all lazy", etc. What
I find most interesting is many (not all, so turn the flame throwers
off) are NOT what I, and many others, would consider "real hams".
Yes, they can pound a key. Yes, they collect that paper. Yes, they
have DXCC on 5 bands. However, what are they doing in the way of
public service? The last time I looked, our organization was called
the Amateur Radio SERVICE. If you perform public service, good, I am
NOT talking about you, but if you are one of these whining, doom
saying, the sky is falling, and amateur radio is dead types (seems I
heard the exact same thing about incentive licensing) and do NOT
perform any public service, maybe YOU need to think about who is the
"real ham"

Try posting this on "misc.immigration"

Actually, he's not "illegal" in the sense that Congress passed a law a long time ago that indicates that any Cuban that makes it to shore may not be deported - assumed political asylum.

Just click on the floppy disk icon towards the upper-left-hand area and it's
possible. I did it myself for later printing.

And it is too detailed to print on a single page (reference another post).
I tried it on my 1440 dpi printer and the print was too small to be useful.
I'll have to come up with a plan B. Nice chart, and thanks to the original
poster!

I would be your neighbor.
I'd help you acomplish your lofty goals.
I'd even buy cable, steal all the pay channels, and pipe it into your house, and we would split the bill.
Let's turn a computer into a linux firewall, plug it into a cable modem, and hook it to a router to add a new meaning to the term "Network Neighborhood"!

The last neighbor that complained about my landscaping, I put a toilet in the front yard next to thier yard filled with flowers, and landscaped around. Those yard nuts just about had a stroke.

I don't have a satelite reciever, but many fellow engineers and myself spent considerable time hacking cable and satelite boxes, and making the info available.

Stop whining, and enjoy the fruits of our labor.

Oh... by the way... you can make free payphone calls by putting a 6.5 megahertz crystal in a radio shack pocket dialer and pulsing the star key. Each pulse is a nickle. And for you Jeff...(you know who you are) this device is legaly refered to as an "Access Device" and is strictly forbidden by Federal Law. I don't own one... so why should I care.

Have Fun!!

Jeff is right about this antenna, but for us here in NY who have weather (instead of climate) it may be impractical in the colder months.

If I remember right, the majority of the license manuals were based on an FCC study guide so the fault was 100% on the FCC. The FCC published the faulty study guide. By keeping the exams a secret, seems the FCC tried to get by with just a couple of exams. Bash collected the clues, solved the mystery, and exposed the FCC's little secret. The premises may be questionable, but if they are true, seems the logic is OK.

> The uproar is the same as that caused when students steal a
> professors exam paper and make the questions and answers available to
> themselves and other students, in an effort to pass the test without
> actually having to do the work of learning the material...

When I taught, I solved the problem through many multiple exams which is what the FCC should have done.

Nope, Bash was effective in obtaining the contents of the test
without stealing. He relied on the memories of the test takers
and was a good reporter.

> There was a time when stealing a test was considered immoral.

Was there ever a time when having a good memory was immoral?
Is polling voters to see how they voted considered "stealing"
the results of an election? Seems you are engaging in petitio
principii.

> That he wasn't doesn't prove that stealing a
> government test is right...

That he wasn't probably means that the courts would not have
considered it to be theft.

Sorry, you can't steal from the government on the same basis
that you can be accused of doing so by a college proffessor.
Copyright can be used to protect the college proffesor's
test...NOT SO for government documentation...which
includes tests.

>>I suspect more people were upset over
>>what he did, rather than what, if any, impact he actually had.
>
>There was a time when stealing a test was considered immoral. People reacted
>to that perceived immorality.

They can perceive whatever they want and consider
it anything they want...that didn't make it illegal which
was the only thing that counted when all was said and done.

>>In the end, the FCC never went after Bash which certainly
>>suggests the FCC didn't expect to win
>
>Phil, our retired FCC man, says it was a political decision. He certainly
>could have been charged. That he wasn't doesn't prove that stealing a
>government test is right...

I didn't say it proved anything...I said:
"the FCC never went after Bash which certainly
suggests the FCC didn't expect to win..."

Phil is entitled to his opinion...as are all people,
lawyer and non-lawyer alike.
I respect Phil's opinion but repectfully disagree.
Indeed, had it gone to court there most certainly would
have been no problem finding opposing legal
councel that would have defended Bash against

the FCC charges. That's what makes for court
decisions in the first place.

I don't disagree at all. What is your point?
The fact remains that Bash was NOT prosecuted.
We can speculate as to why until hell freezes
over and be no more in agreement or disagreement
than now. I have my opinion, Phil Kane has his,
others have their own. It is a mute point and
will never be resolved. My ONLY point was
to offer another perspective which was that
the legallity of Bash's efforts was never tested
(no pun intended) and as such, can not be stated either
way with any certainty. Specuate all we want,
but there is NO absolute answer now, nor will there
ever be.

That kid isn't going anywhere. Butch Reno talked tough last week, then backed down as usual. Clinton doesn't have the gonads to order the law enforced because of politics. He doesn't want to ailenate "the Cuban/American community" in Miami, since that would likely cost Algore the all-important win of Florida in the upcoming presidential election.

This is also the reason why action is not being taken against Lazaro Gonzales. He has refused to comply with orders to give up the child and has publicly stated that the Feds will have to come and get him. He should be indicted on charges of kidnapping and inciting civil disobedience.

I s David in love with OTK? Does he long to snuggle
up, hop up on his shoulders from a running start and
say "Oh I love you Richard you big hulky hairy studmuffin!"

> I timed an OTK/RCL transmission at 12 minutes and 15 seconds which
> ended with OTK signing HIS call!!
> We would like to know.

Hey David! we would like to know:

1. Have you had that cat-head-sized cyst removed
from the side of your neck yet? (your parasitic
"Siamese twin") Don't that thing throbbing and
quivering like it has a mind of it's own scare
you? like something IN your body out of the movie
Alien..?

2. Do you still long to have your lesbian lover neighbors
strip you down naked, put a studded dog collar around
your neck and walk you around the house on all-fours..?

Mistress Zena Whipmaster Extraoridnare: "If you a good
doggie Davey, you can kiss my knee-high black leather
boots. But if you a bad doggie, you get the whip" CRACK!!!

Dog-collared David: "Oh yes my mistress may I have another??"
WHOOSH..CRACK!!!!! "AAARGH! more more! let me eat Alpo
from a dog bowl Mistress! PLEASE oh PLEASE" CRACK!!!!!!

{as ZQ grovels at the feet of his leather-clad "friends"...]

BAAAWAAAA HA HA HA HA HA HA HAHAWWW!!

Howie baby, everything remains to be seen. It's far too early to assess the ramifications, reverberations and repercussions of figuratively giving away tickets but anyone who denies that lowering standards to increase numbers is beneficial, is guilty of self delusion.

According to my dear friend KE4TEW, one of the finest hams to ever hold a ticket, guesss who was jamming W2OTK yesterday? WA4KBX, Old Joe, who ran for mayor of Bunghole, South Carolina. Maybe Riley took notice of Briar Fox hiding in the bushes?

While sitting here working away at my office,
I tune around and listen a lot, including 14.313.

I'm constantly hearing WA9KJB, Brother John, W4FQF and others talk
about how they "know what's coming" and they "have the inside scoop,"
and "people are going to be surprised" blah blah blah...
And of course, they never, ever spell out what their
so-called "insider information" is all about.

Now, *if* this is true, I have a problem with it.
Frankly, I think this kind of gossiping amongst
a few chosen people about such grave matters
is wrong. Childishly taunting "I know something
you don't know! Naah Naah Boo Boo!" when you're
talking about accusing people of crimes is unacceptable behavior.
Loose talk and jumping to conclusions
can lead to injustice (AC5IU comes to mind).

Moreover, if Mr. H. really does have some "inner circle" of disciples,
you'd think he'd pick people with a little more discretion.
Listening to these guys dance with glee over their
"secret knowledge" is unseemly.

This has got to be America! Millions of dollars spent on an alien snot nosed kid from a tenth rate country! The entire country coming to a standstill. That brat is going to have the world given him on a silver platter---hey... it's Harvard or Yale for sure! Well... let us give it ten years or so to see if it was all worth it! That brat better become a brain surgeon! Then again, he already has an excuse if he ends up in a drug bust or some anti-social behaviour or crime--- he was traumatized as a child back in 2000! I'll be around to see it---if the story is covered in the media instead of being quietly set aside. This story isn't over---it still has the potential of hitting the fan and you can bet it's going to splatter good and plenty, far and wide!

But I'm being negative... bad me... lets all hope that that after he completes a stellar performance in public school he will continue his success at Harvard get married and have a model family while occupied with important work caring for the destitute become a politician and help us re-discover the idealism, morality and greatness that once was this country.

> in your backyard when knowing it measured, for example, 80' x 100'?

Well, first of all, yes. There's just enough room in 80' x 100' to get a dipole for 3.800 MHz. up diagonally.

But, more to the point, I can tell you from extensive personal experience, that what looks from the ground like would be enough room may not be so once you're 40' or 50' in the air. For example, it's not easy to measure the heights of trees. He may have thought say 50' was high enough, and once the tower was up, it turned out it wasn't, and he couldn't go higher with the tower.

The real point is there wasn't enough information in the original post to determine what was the reason, and it was unfair to cast aspersions, that being the case.

Besides, a quick check of one of the callsign servers with old call information shows that his call was issued in 1984. I think he's earned more respect than your comment gave.

Actually, it doesn't have the frequencies the Air Force and CIA use to communicate with the flying saucers that make test flights over the Nevada desert from the Groome Lake (AKA Area 51) facility late at night. I think that they use some super-secret kind of digital spread-spectrum modulation, too.

Was it legal for W4RCL to extend his ham ticket to (ex) W(b)2OTK
at OTK's ham shack. Was the station license valid and would it carry
over to include OTK's QTH.
Was 'RCL actually in control of the transmitter? Could he have
prevented OTK from transmitting if OTK violated any rules.Was RCL
famalier with the equipment to stop transmission?
I timed an OTK/RCL transmission at 12 minutes and 15 seconds which
ended with OTK signing HIS call!!
We would like to know.

When one has designed, built, aligned, tested, debugged, repaired and operated a rig from day one, it does indeed become somewhat of an extension of oneself - by both genders. It was common in the old days for a rig to be the personal creation of the ham who owned it. That sort of thing still exists today, in some hamshacks.

Aaron Jones' explanation is probably closest to the facts, though.

Now that I think about it, when I was 8 (1962) I was hanging out
in my neighbor's garage (he was and still is WA6AIG) paging through
QST magazines, watching him homebrew VHF (220 Mc) transmitters and
beam antennas, all the while listening to the nation's first repeater
(K6MYK) as "background music." I too had built crystal sets and had
completely dismantled an All American Five to "see how it worked."
Building my first Heathkit was still two years away, though.

Let's not get scatological about my last name.

Obviously, you need to listen to Art Bell late at night and become more informed about Area 51. I would expect there to be some real interesting monitoring opportunities in the Nevada desert if someone could figure out the modulation system that the captured space aliens who are imprisoned there revealed to the US government when they taught us how to build flying saucers.

It's just a thought.

Close, but no kewpie.

Ham radio was around for years before the broadcast industry came along.

However, so many of the people who got into ham radio IMAGINED
themselves big-time radio stars, they took on some of the mannerisms.

>car I recall. Hey Jeff, did you have Don Schwinn for physics? ;-)

For both physics and an astrospace class he offered! Our final exam for the astro class was the FAA private pilot written exam. What a teacher he was! He had us building and launching dry-fuel model rockets.

Remember the weather station he had set up? We'd call in daily weather observations to KAPX, they'd record our reports, then broadcast them.

Can you imagine a teacher getting away with a full-size poster of bikini-clad Rachel Welch in today's classroom?

Did you have Griggs for oceanography?

Ah, the memories of San Clemente High (with North Beach just 3 minutes away).

73, Jim!

One type of multi-band dipole that works very nicely is the design
in which one connects jumpers across in-line insulators when wanting
to do a band change. Yes, it means a trip outside on a ladder to change
bands, but in operation, its performance is no different than a single-
band dipole.

It looks something like this:

```
)-----()-----()-----()-----()-----||-----()-----()-----()-----()-----(
||
||
||
coax feed
```

Each () insulator has a jumper; when all insulators are jumpered,
the dipole is set for say, 80m. With the two outer jumpers on each
end disconnected, the dipole is set for 40m. Et cetera.

>So how come all the uproar over Bash if things didn't change...

Bash just offered the direct questions which others (AMECO,
etc.) already offered, albeit not necessarily in exactly the
same format. I suspect more people were upset over
what he did, rather than what, if any, impact he actually had.
In the end, the FCC never went after Bash which certainly
suggests the FCC didn't expect to win or at the least
was uncertain enough about the outcome that they just
weren't going to bother.

After all...how many ways can you ask what the
unit of resistance is?

Cheers,
Bill K2UNK

Larry,
I am talking about the everyday "techs" employed in
industry (e.g. cable TV people; telephony maintenance
people; some consumer elctronics repair, auto
electronics repair, avionics, etc.)

If your day job offers you the opportuity to repair
a tube type organ, I'd say you are far more specialized
than you give yourself credit for. Such repair work
is not commonplace today. Indeed, most would call
you a specialist because you are able to work on those

old tube type stuff...even if the electronics is, in reality,
simpler.

Consider the PC of today. Repair of circuit boards
just isn't done. Even if a motherboard goes, the unit
is too complex to isolate the chip and a new board is
the instant (and cheaper) path to take.

>PS- Last year one of these old Hammonds was hit by lighting. IT came

No one said that the 1957 edition alone was an all-time best
seller. A technical book, by definition, must be updated at
a rate proportional to the rate at which advancements take
place within its field. But you know this.

<<So in this movie, is some doofus calling Dianna Ross on the radio? >>

You're thinking of PHENOMENON (John Travolta) where Forrest Whittaker is a ham who uses a Kenwood TS940 to call "CQ Dianna Ross" and later interrupts some 10MHz military RTTY traffic. Sort of a doofus.

Jodie Foster's call letters in the movie CONTACT were "W9GFO" when she used her KWM-2.

What exactly is CTCSS?

Repeater listing...
147.060 -.600 7digits*/# 100.000Hz

Ok, I know the 7digits*/# is turning of the auto patch.
The 100.00Hz is CTCSS, but what is it?
Do I have to set it up in both RX and TX? or just TX?
Thanx in advance

Why stop? My cell phone allows me to place a free call to the Samaritan truck or State Police, which I do all the time.

The last time I stopped to offer help, the "motorists" climbed a fence, jumped in another car, and split. It wasn't their car, they were breaking into it. Luckily, they weren't armed. FWIW, this was NOT in a bad area, it was on Rt. 84 in a suburban area of Connecticut. Since then, I don't stop, I call professionals.

Paul,
Reno, Clinton and the INS HAD to do what HAD to be done and I understand that. If I, you and everyone else must obey the law of the land, then why not the Miami Gonzalezes? And I'm positive the kid was not harmed in any way as proven by the INS female who took control of him immediately after being snatched. What I say is that one must relive the mistakes of history if nothing had been done to correct them years ago. Remember when we invaded Grenada to save the kids in the med school? We should have coordinated an attack on Cuba too. If the USA felt threatened in OUR SPHERE OF INFLUENCE i.e. North America, we've acted but NOT regarding Cuba. And to think that we are now appeasing a bearded commie s.o.b. who would have been laughing had Russian missiles been launched from his soil to rain death upon us. I and millions of other Americans didn't like what happened today but it was unavoidable by our OWN making. The reunion however guarantees nothing. The kid may have a violent reaction to poppa as he calls him? Or maybe poppa will ask for political asylum which would shut Castro's mouth while jeapordizing every other related Gonzalez on the island? Whatever happens I saw that Reno and everyone in the Dept. of Justice, the Prez and the INS had gone out of their way with patience and understanding and LAW MUST BE OBEYED, period.

So did the SS.

> Did the job need doing? On a basic level, a government that cannot or will
> not enforce its own lawful orders won't be doing it for long.

There's that word, "lawful." There was a government that once issued a
"lawful" order that all members of a particular religion be exterminated
(that's the word that was used). Men, women, children, to be
EXTERMINATED simply for being members of a particular faith.

And before you say that couldn't happen here, it DID happen here. The
governor of Missouri sent TROOPS to exterminate the Mormons.

"Lawful" orders are any orders issued by the people who make or
interpret the law.

This guy actually believes I didn't know Clinton is limited to two terms? Sheesh! You don't like assassinations of commies? Ever hear of Salvador Allende of Chile? Who did him in, the Mickey Mouse Club? Yet I never used that term. Fidel could have been asked politely to step aside as we ringed his palace. Cuba, a small independent country, was Russia's BASE OF OPERATIONS in North America and the launching pad for her nuclear missiles, remember? I remember those October '62 days VIVIDLY since I was in New York City and no one was sure there would be a tomorrow. Cuba, that sweet little independent country, had a force on Grenada all set to interdict our oil supplies coming from Margarita Island Venezuela. Reagan did something about it. Cuba, that sweet little island, had troops in Angola, Ethiopia and Eritrea trying to help communize Africa. Have you forgotten? Sweet independent Cuba, the supplier of weapons to the commie Sandinistas in Nicaragua. Castro and Daniel Ortega were buddy buddy planning to communize and take control of Central America and the Panama Canal. Yep, guess you're right. Nothing should have been done to take over that sweet little independent island.

WORD TO THE WISE!!! This country has had all of it's attention placed on the 'EG' situation while who knows what happened in the rest of the world, Congress and White House! Better get your focus back where it belongs... who knows what the F**K happened for the past 5 months! I've already learned that when situations like these happen it makes for an opportune time for all kinds of 'backdoor' finagling---don't be a sucker and fall for this crap!

Rick: Perhaps you need to listen to more of Rush Limbaugh and Matt Drudge on 970, WKHM. I'm sure you'd learn all about the special "perks" your fellow communist party members enjoy in Cuba! (i.e. an extra five gallons of gas per month, an extra roll of TP and toothpaste per month, etc.)

Keep on teaching your socialism over at JCC. That's why my kids go to a good conservative school. (Spring Arbor) Do we have your permission to take some of your quotes and use them in "The Voice of the People"???

Don B.

Futhermore, is is unanimous and consistent in the US territory that certain individuals have more rights that others---in this instance---aliens.

There are at least two problems with your analysis.

First, if you think n0vfp had anything to do with procucing this material, you haven't read any of his material. He is incapable of it. He is also notorious for posting stuff that isn't his without crediting who's it is.

Second, it is neither careful nor well-thought out. Moreover, its only purpose is to fan the flames of a situation that has effectively been resolved with the surrender of the subject's license. Sure, there are some malcontents that would like it to continue, and you can read their efforts at stirring up trouble right here on r.r.a.m.

Basically, when you add it all up, it's nothing but a troll post. You can generally assume that from anything by n0vfp.

Really? I found this to be a rather lifeless outing for A REAL Ham.
Audiences have become jaded to the old CB slurs and are expecting more
pizzazz from their trolls. Eschewing apostrophes, A REAL Ham briefly takes
the reader inside the MD 20-20-sloshed mind of today's cranky ham radio
operator. There is no character development, precious little plot, and a
tired message. This has all been done before, by more skillful trolls with a
flair for the art form. Even authentic, heartfelt hate and sheer dumbfsckery
cannot compensate for lack of skill. A REAL Ham must learn the basics before
he can expect to enrage his targets consistently.

> What exactly is CTCSS?
>
> Repeater listing...
> 147.060 -.600 7digits*/# 100.000Hz

Continuous Tone Coded Squelch System. It's a subaudible tone that's continuously transmitted whenever the transmitter is keyed, and in the receiver a tone detector, upon receiving the correct tone will open the squelch in the receiving radio.

Motorola's trade name is "Private Line", which is short cut to PL and is the name most hams use to describe CTCSS. GE's name for the same arrangement is Quiet Channel and RCA's name is Channel Guard (or vice versa).

There is a system of standard tones and code names (for example, 100 Hz is 1Z) that you should be able to find in the ARRL Repeater Directory, or possibly somewhere on the 'net. Some radios will allow the frequency to be programmed directly, some use a digital/binary system, and some use the standard code names.

Most VHF (and some HF) radios sold in the last 15 years have PL transmit capability built in. Usually a PL decoder is an option or just not available. It's usually easer to add aftermarket encoding than aftermarket decoding. Check the manual of your radio for capabilities and methods of use.

In the early years of repeaters, PL was used to make a repeater "private", a concept many amateurs find contrary to the idea of amateur radio. Within the last 15 years it's used more to resolve co-channel or nearby same-channel interference problems. It's also sometimes used to resolve 2A-B intermod symptoms.

Hope this helps.

No pony's here... You'd be lucky to stay close enough to my old
Cougar to even tell what it is..

I don't even race it anymore really.. I made it too fast to run all
out on the streets..

Oh, and don't think your little tinfoil toy can keep up either.. I've
watched people try to build a Camaro to keep up. There ain't enough
structure to the cars to hold them together with the hp's necessary to
keep up with me... Maybe with a 9inch rear end and a rear frame, but
not with them puny little 7.whatever inchers you guys get...

Sorry, that was kind of an obscure reference. You'd have had to have
been reading alt.dss.hack about a month ago to get it. Basically some
guy got all bent out of shape, accusing someone else of being
prejudiced against him because he was handicapped and in a wheelchair,
when in reality the guy in the wheelchair had never mentioned it
before and the guy he was accusing had no way of knowing he was in a
wheelchair IRL. Does that make sense?

Like I said, you had to be there. ;-)

For the record, I have no problem whatsoever with you or anyone else
being a cripple or being in a wheelchair.

A collection of shortwave listening resources for the beginner and for juveniles, as well as general radio references for all ages can be found at

http://www.inwit.com/inwit/links/shortwaveradiolistening.html

The site includes a regularly-updated shortwave listening log, writings on how to write reception reports and obtain QSL cards, contact addresses and web/webcast links for station worldwide, useful radio-related web links including pointers to radio kit sites, and source code modules for computer control of the Yaseu FRG-100 Communications Receiver using the FIF-232C Computer-Aided Transceiver (CAT) System.

The site is soon to include writings on

Lightning and Protection
The Frequency Bands
Antennas
Propagation and the Atmosphere
Number Calling Stations

Let me examine the use of the word "scumbag". It seems to have been recently reinvigorated by Bob Grant, the rather right wing radio celebrity when he started using it to describe the ex-governor of New York Mario Cuomo. What I think you mean when you use in the context of "anyone who was an technician plus..." is that such a person is "scum"--- a low, worthless person. Scumbag is more precisely a prophylactic and although it conjures up a rather disgusting picture it is meaningless in the way you have chosen to use it.
Now that we have cleared that up, we can address the phrase "don't come on my frequency..." First of all I take issue with the concept of "my frequency" but rather than discuss that here, tell where your frequency is, and if my General Class license allows me to go there I will join you some day...for now perhaps we could examine your use of the word "come" as in "don't come on my frequency"- what exactly did you mean by that?

Well, if it's an original Cougar (built on the original Mustang
frameset), then you might be correct. If it's one of the newer ones,
I'll just let off the gas until I can read "raguoC" in the mirror.

Good thing, or I'll run over your toes. ;)

For the record, I am neither permanently crippled (I hope), nor am I
always in a wheelchair. I have good days where I am up and around, and
bad days where I can't get out of bed without more pain than it's
worth. On a good day, I pop the T-tops and hit the highway, on the bad
days I wonder if there will be a good day before I run out of food. ;)

> interpret the law.

As I recall, the Mormons were pretty good at massacre themselves or at the very least some very non-professional execution of self-defense rights. That part of history is not pretty and is pretty indefensible.
But it proves only that no structural system prevents mankind from being bozos. We have had lynchings, intimidations by the carload, wrongful executions (many if one extrapolates from existing data), and miscarriages of justice beyond measure. The question is what else does one do?

First two things have to happen. Issues have to be de-politicized; you simply cannot decide each case one at a time on the luck of the draw. A legal system must be predictable or it is a sham. Predictability implies a certainty of enforcement. (kind of leaves out California). Second, there has to be an area beyond the will of the majority whether you call it a Bill of Rights or the Ancient Rights of Englishmen or the Three Laws of Robotics.

The Missouri Governor led a lynch mob, pure and simple knowing full well that the Federal Government had neither the will nor the means (or for that matter at the time - the laws) to oppose him. Lawful?
Hardly. I would also point out that religion meant a bit more at the time, particularly it would seem in upstate New York where not only the LDS but the various offshoots of Captain Miller came out of at roughly the same time. Something in the water :-)

It has often been noted that in the event of a successful invasion, little changes down at the Police Department. That was my point, extractions are pretty much all alike.

So far as I can tell, Elian was being used as a hostage in a political confrontation. Being a child of 6, his opinions might be interesting but hardly decisive. The politics can be settled later - as they were in Missouri. Cases like this make for interesting politics and bad law.

Should you ever in your pursuit of Mormon history end up in Florence NE (now part of Omaha) give me a call. I won't even offer to buy you a beer. :-)

I have to go along with Rick here -- The overreaction of the Miami Cuban community is understandable due to their strong personal feelings about the Castro regime, but it just doesn't make sense to treat this case so much differently than any other case of illegal immigration. Yes, I know that there are special rules in place for refugee Cubans, but I think that this boy has been more abused as a political football and

anti-Castro lightning rod than he ever was in Cuba or as a castaway on the high seas....

With respect to the enforcement action - I think it was pretty obvious to all that the Miami "family" was fighting a delaying action and was not negotiating in good faith. They may have had good intentions, but they should have realized that the law was not on their side and they couldn't win this one. Instead, they chose to subject this kid to the inevitable forceful extraction that they know would come (an action made necessary by the "family") if the government was to retain any credibility in law enforcement or international relations.

A sad situation all around.

Maybe the father doesn't see it like that. Shouldn't he have the right
to make that judgement? I think it's pretty clear that he isn't just
following a Castro script on this one...

What would you think of a government that selectively enforces laws -
and would allow difficult cases like this one go unenforced because they
are afraid of the public relations backlash? That would be repugnant.
We live in a nation of laws, and a group of protesters should not be
allowed to hold the nation hostage for fear of possibly offending
someone. The "Miami relatives" force action, and then whine about it on
national TV. It makes me sick.

Right at the moment I do not remember the precise name but I believe it contained 'Meadows'. Seems that a wagon train was pretty well done in (children, pregnant women, etc.) by a band of yo-yos authorized by (and reported to later) Brigham Young and some Indians recruited for the purpose. There were rumors of some troops coming from Colorado. Things got totally out of hand. Like a lot of other things probably best not denied but probably also better not judged by 21st Century standards. Even shows up on the Real West series now and again so it is not all that obscure.

Are you aware that one of the upshots of all that was that Missouri has at a state level some of the more serious (some say Draconian) laws about Church/State separation in the US. Giving one's employees off for Good Friday is illegal in 7 states; it is a felony in Missouri.

Drop over to http://www.economist.com to get a very good summary of how the rest of the world looks at the great elian caper, at least before the hostage was released to his father. They devote both an editorial and a major story to it. I am pretty sure both are available to non-subscribers. Just hit 'current issue' on the left menu.

Why would any sane human being come to Nebraska in March?? You got away with it this time but don't expect it often :-).

There is also the minor matter of the Hague Convention on International
Child Abduction. There is absolutely no question of law on this one -- he
belongs to and with his father and Janet Reno's only mistake was letting it
get this far.

One only needs to listen to the bitter old farts on 75 or the competition to be named top LID on 14.313 daily to see that the hobby was dying and being overrun with second class ops and third-rate human beings. (The postings of the "Bitter Bastard Brigade" here are further proof of the level of idiocy in the hobby.)

Hopefully the sore losers will vacate the airwaves and all of those "welfare" licencees will make the hobby interesting again.

BTW-"radiosigs", whats your CW speed? How often are YOU on the CW portion of the bands. Probably couldn't keep up with one of those new "welfare" ops.

If I had to guess, I bet I've heard you on 75, screaming at somebody to get off of "your" frequency 'cause you've got a sked to whine about your hemmorhoids and lumbago with the rest of the sore losers.

Get a life, douchebag. Or better yet, get off the air.

Believe me--you and your ilk won't be missed.

KingKevin11,
Yes, you can. Usually on VHF (2 meters), on repeaters,
there are things called 'autopatches'. This is a connection
between the repeater and the telephone lines. You can 'dial'
a phone number, and the 'repeater' calls the number. Thats
not a very good description of how it really works, but can
give you an idea of what happens.

: It certainly appears as if they are down, I have had the same result =
: myself!

It is a classic case of domain name hijacking, apparently perpetrated
through netfirms.com -- a Canadian registration firm.

What happens is this: Someone breaks into a domain name registry and
changes the IP address record so that www.arrl.org maps into the wrong
IP address. The incorrect mapping propagates throughout the DNS system,
and pretty soon the real www.arrl.org "disappears".

As I write this, a traceroute to www.arrl.org winds up at netfirms.com,
and a whois inquiry listings netfirms domain name servers as the primary
ARRL servers! Clearly, somebody at the ARRL has either forgotten about
putting a password on their domain name administration records, or else
has had their Network Solutions password stolen.

The current record (note the update date) is included below, because it
will be necessary for someone to use the one address which probably
works (or a telephone) to contact one of the people below and have them
restore the proper address mappings.

>
>But it is no longer UNIQUE and this is the root issue here.

It is still unique for almost anyone you can find. Indeed,
what remains UNIQUE for the ham is the NO cost involved.
Sure I can call globally with a cellphone, but take a look
at the bill that you get once it comes in. My annual
telephone bill for home is greater than the total costs
I have inveted in all my ham gear...and that includes
an HF transciever, a mobil 2m and a dual band HT.
My 2m mobile is used, cost me $100. That has provided
me with untold hours of pleasant discussions, heads up
traffic info, etc during my daily commutes. The cost
to me is $0 per minutes of use.

>It used to be that ham radio operators we the ONLY people
>in the neighborhood who could communicate in realtime with
>people in other States and Countries, from either their car
>or home.

You have to go back to the 40s or earlier for that
to be true. International telephone capability has
been around for a VERY long time.

>This is no longer the case today. The public now has Internet, Cellular
>Telephones, E-Mail, Chat Rooms, FRS Walkie-Talkies. Soon it will be

>and much less expensive communications technology,
>which is readily available to the General Public, from WalMart
>to Radio Shack and everyplace in-between. Again this is the reality of
>today.

But there never was a host of newbies lining up to
become hams anyway. All the kids are more technology
oriented than in the past as is the general public.

The JOB is for US to seek out those youngsters and
people who, for whatever reasons, DO find an interest
in ham radio and what it offers. Indeed, it must offer
something to us or we wouldn't have the over 1/2 million
licensed hams we do in this country.

All is NOT doom and gloom for ham radio in
comparison to other technolgy interests. Ham radio
always had only a niche market following and that
still exists.

>Face it guys, ham radio has become OBSOLETE.
>And that gentlemen, regardless if you
>choose to accept it or not, is the plain truth of this whole issue.
>I may also add that in lieu of all these
>personal communications devices, why should the public
>care about ham radio?

The public never did care. The hams are the ones that
care. The public cares when we step up to those
occasional emergencies and become IMPORTANT in their
daily lives.

>Even Citizens Band radio is in decline! It's OBSOLETE technology also,
>unless you drive on the Interstates alot.

Actually, FRS does better for the family today anyway.

The PURPOSE of ham radio is NOT to be that medium
which is in competition with the internet's transport ability.
Let me also turn your question around...which service
will provide you wth the ability to communicate in
the middle of a widespread flooded area with NO electric
power from the commercial sources?

>> Relax and remember you're participating in the world's greatest hobby,
>
>That is as technologically obsolete as the tube type radios many
>hams still run and just as inefficent also. Sorry to
>keep harpin on this, but it's the truth that you hams NEED
>to hear. Don't believe it? Read any article written by
>Wayne Green in the past 5 Years

So please tell us all why the police, fire, rescue squads don't just
abondon radio communications and go to all that wizz-bang
internet and/or cell phones? It wouldn't have anything to

do with conventional radio still being the best for their
purposes would it?

>concerning the outlook for this hobby. He's one of the FEW gems we have in
>this hobby that
>knows anything about what is really going on, and how ham radio will
>probably be dead by 2015.

If you mean Wayne Green, then you need help.
Ham radio will change, it has changed and it will
survive. Of that I am certain.

Cheers,
Bill K2UNK

Has anyone out there had any experience with Icom 735 phase lock loops coming unlocked (mostly two higher freq vco,s) ?

Indication of the unlock is rx will start to garble and shortly later the tx will begin to garble --- but will continue to tx a raspy signal. ssb and cw both.

It has been a chronic problem ---- the ppl coming unlocked -- I have been sucessful in getting it back in lock by tweeking the cap for the freq range that comes unlocked-- there are four vco,s. It will stay operating properly for two to six months when it comes unlocked again. I have tried heat and cooling and tempature does not seem to be a factor. Vibration , mechanical shock in the oscillator area (banging with a screwdriver handle) does not change things.

Has anyone else experienced this ??? How did you solve it ??

Clinton, Algore, and the rest of that adminisration have got to go. It seems to me that the father could have made a concession or two and went to Miami. Of course he couldn't do that castro wouldn't approve and neither would Clinton.
I say whatever we could, or can do to slap Castro around a little, do it. Of course it seems that Clinton is supporting the commies agenda.

Very common. Replace the plastic trimmer caps with ceramic ones. See the
Icom website under FAQ for the description and fix.

Excellent response Bill.

I enjoy the use of the internet and consider it to be an
invaluble resource. I simply enjoy using radios. I
can't explain it. Maybe it's the fasination that a signal
can be transmitted hundreds and even thousands
of miles and still be picked out of the thousands of other
signals in the air.

I've noticed that the beginning of this thread was posted
to several radio newsgroups. Why would someone so
down on amateur radio be interested in any type of radio?
Won't they all be obsolete soon?

One other thing. My cable modem does not reach my
vehicles and I'm not sure if I would use it in the first
place. With the traffic around here your eyes need to
be on the road. I have changed my route to and from
work on numerous occasions thanks to other hams
on the road.

Gee whiz and gosharootee, Keith. It didn't look really sanitary, did it.
Of course it looked like Black Squads, the Gestapo, and every other police
action of a similar stripe -- the considerations are the same. That the INS
might have been a tad amateurish about it only shows that they don't do it
enough to be REALLY good at it. Whether one is doing a cell extraction, a
drug raid, a death squad caper, or the execution of a legal order, these
rules apply:

A: At the end of the day, the good guys go home to hearth, family, and a
nice warm bed.
B: If force is to be used, bring enough to ensure that no one is tempted to

do anything stupid.
C: Maintain the initiative. Get the doors open and the occupants concentrated quickly, again so no one has the chance to barricade or do anything stupid.
D: Intelligence is never 100 percent.

The great gun-pointing incident is a non-issue. First, until he sees hands not much is going to happen one way or the other. The gun points where one is looking -- beats hell out of it pointing where he is not looking or waving it around or leaving it holstered. Focusing the issue is how it is done. Getting the object of the exercise out of the area is also very sound planning and execution. The INS did its job professionally.

Did the job need doing? On a basic level, a government that cannot or will not enforce its own lawful orders won't be doing it for long. On a human level, being a natural parent does bring some rights with it that in a system of law have to be enforced by the state or there is no system of aw -- a lawful court declined to interfere because there is no legal basis for interference. On a political level, the boy was a hostage and the hostage was extracted, pure and simple.

Sorry it didn't look good for the cameras. Lancing boils is not a pretty sight.

Note also that the Great Fort Hood Flash experiment shows the Feds did NOT fire at Waco.

It was a van, not a truck. The boy was being tightly held by a
woman agent -- at no time was the boy thrown. You're spewing
your usual lies.

>IS THIS WHAT YOU THINK THAT THE AMERICAN FLAG REALLY STANDS FOR?

Yup. Re-uniting a boy and his dad.

>I am ashamed of what my government has become.

Unless of course, it had been your son. Witnesses report that father
and son are very happy finally being together again.

This morning I got a call from Tom and fellows..let's rally around the guy. He has an appointment with a top cardiologist next week to evaluate things after possibly suffering a silent heart attack and since this a special time of year with Easter and Passover coinciding, how about all my brother Christians and Jews saying a special prayer that the intitial diagnosis was wrong and that his main trouble having shown up on the EKG was because of jockey shorts 1 size too small?
Tom told me about an incident the other day which caused quite a flap. I can't hear Gettysburg, PA from my QTH and had no knowledge of Riley's appearance on .313. I guess he overheard that stupid bigmouth from S.C., Joe KBX, saying how illegal it was for W2OTK to have been on the air and Riley shut Bungadumb up really fast. Hey Joe, why don't you and your old fart friend Seymour-see less-he's still a schmuck, SHUT UP? Neither of you knows the rules and regs and yet you try to pass yourselves off as Riley's henchmen. Just shut up and give everybody a rest! Gee I wish Riley would look the other way and let me take you and Seymour apart right on .313 and here's why. Everybody wants this war to die out except you two, Polly and BadBlood, Stevie Wonder Tiger Woods MXL, Toiletsi and Big Mouth Herbie who was on again bad mouthing Mrs. Hoffman. But the biggest offensive troublemakers must be Joe Bungadung and Seymour Clueless. I wonder what you two would do if Rich retested, passed and got back on the air? SUICIDE? Hell why not since turnabout is fair play. You're killing ham radio, aren't you?

You talk worldwide on 2m? What about the expense of SOMEONE else's
repeater, just to extend the range, but still far from world wide?

You're talking apples and oranges.

My feeling is that all the radio signals that are in the air are free to decode if you are smart enough to do it. It won't cost the Satellite company $$ since the signals are already in the air anyways and many hams are to cheap to subscribe so there is really no loss of revenue to the Satellite companys like Direct TV etc. I actually take my hat off to people who can figure out how to decode the stuff.

Scanner nuts ought to pay attention to at *least* one thing about ham radio--being licensed as an amateur, is also being "licensed" in many states, to have a mobile scanner.

I just built a 80m CW QRP rig--for less than $20. Most of the parts were laying around. Try to connect to the internet and communicate with ppl with about 13 parts or so, (and a part is not a "motherboard" or a modem--I'm talking discrete components) hand built in your home, and battery operated.

Not only that, I simply *love* the hobby. And I love the internet.

They are two different things to me, used for different purposes. Also, how many ppl with cell phones, stop to help ppl in need on freeways? What percentage? And think of how many ham operators would stop to help? Public Service is a very big part of ham radio. I live in the midwest--what good are your cell phones, and internet connections, when the towers have been destroyed by a tornado?? Or the CO has been moved a few blocks by one?

Maybe I'm sounding a little defensive. Ham radio is not for everyone, but for those of us who think it is worthwhile, are the ones who will be there in an emergency. And when there aren't any emergencies, we have fun talking to ppl all over the world, sometimes with home built equipment, as well as local ppl. I know I can travel to most places in the US, and with a handheld 2m radio, get directions, help, a friendly conversation with random ppl. Can't do that with a cell phone, not as easily. <imagines someone picking up a cell phone, and talking into it, going, "hey, anyone know of a good chinese rest. around town? And how do I get there from here?">

Cell phones have their place--and so does ham radio.

Elian Gonzales was taken (at gunpoint) from the home in Florida where he was
staying.
Though the news says no one was hurt ... they neglected to mention his uncle
(great uncle?) being struck with the butt of a gun while his house was being
INVADED WITHOUT A WARRANT at 5 AM.

Has anyone noticed that the press isn't being allowed to see the boy but
they've released photos of the boy with his father (smiling) ... don't
believe it all folks.
My bets are on either a staged photo and/or a digital photo editing ...
which can do wonders.
Anyone here could appear in a photo with anyone they want.
Heck, Forrest Gump shook JFK's hand in a movie ... or did we forget that
already?

If the kid's not in bad emotional shape let a reporter go in LIVE to
interview the boy and his father.
He may only be a child but HE has the RIGHT to choose his own fate. His
Mother died trying to get him here.
Just a thought.

I
| first became interested in Amateur Radio, I was told to obtain a
copy
| of Now You're Talking and study and learn it. I did. I was told
to
| get a copy of the code tapes and some computer programs and learn
at
| least 5 wpm. I did (and better) My question is how the heck do
you
| learn all the stuff you are supposed to know as a General +
licensee?
| Simply memorizing the answers is not enough for me. I would
actually
| like to learn this stuff. What do I study? Where do you find an
| elmer willing to teach this? Its not as if you can go out and buy
the
| Advanced version of NYT and learn and listen like I did for the
lower
| licenses. I have spent much time listening before I ever even
keyed
| up on HF. Same thing with VHF & UHF. BUT the material we are
talking
| about here, you can sit and listen forever and not pick up a
fraction
| of it. Where does one go from here? And please no responses
simply
| comprised of "find yourself an elmer and learn from him/her" LOL
| cause with all my long winded rambling I guess basically thats what
| I'm trying to find.

Trigger? Yep, according to Reno, nobody's finger was on the trigger at Waco, either.

Innnn-teresting .. the feds crashed into the home without a warrant, pointing guns. To take an un-armed child from un-armed relatives. This is a great country. For the power-hungry, anyway.

Maybe if AlGore is elected, he'll keep Reno as attorney general. We can always hope.

1) The kid is an illegal.
2) The kid is a Cuban citizen.
3) IF the kid was of legal age AND a US citizen, THEN he would have US
"rights".

But the simple matter is, he is a Cuban citizen, and should be returned to
his father and his country. It makes no difference what we may think of
Cuba, to do any different would create a precedent which would weaken our
ability to protect and/or recover US citizens traveling outside of the US.

>the Portland, OR area?

one the max code test speed is now 5wpm and If you could prove you had
a Novice licesne at some point in time you don't have to take even
that Sir (the general license does not prove but with the FCC go
figure the ARRL has asked the fcc to accept all lapsed coded but as
afar as I know the FCC has answered yet. As to Portland OR most
likely

Check at ARRL.org wander the link and you will find a means to search
for test dates and location near you

>INVADED WITHOUT A WARRANT at 5 AM.

It isn't exactly "invasion" when individuals refuse to turn
over a child to law enforcement authorities after being ordered to do
so by the courts. More precisely, if the situation wasn't so
politically volatile, they would undoubtedly have been charged with
kidnapping, contempt of court, and a host of other charges. It's only
the desire of the administration to keep Florida in Gore's pocket (the
Cuban refugee community in Miami has a lot of political influence)
that kept them from doing just that.

>Has anyone noticed that the press isn't being allowed to see the boy but

Sounds like a typical drug raid to me.

Happens everyday across America.

If it's important enough to ignore our 4th and 5th Amendment
rights to "protect us from drugs" (usually marijuana--that assassin of
children's innocence!!!), it's certainly important enough to ignore
them to remove a child from a hostage situation and reunite him with
his father.

Ok--then send your children to the Netherlands immediately--ANY impartial expert will quickly inform you that the Dutch have more freedom than do US citizens--or citizens of nearly any OTHER country, for that matter.

Surely you want the best for your kids, right?

Or is it just nations whose politics you _personally_ disagree with that you target as places where parents should send their kids away?

Notice the TV interview with Elian's father in which he stated that in Cuba the schools are safe from violence, there is universal health care, and there is no drug problem (among other features)? To _him_ the freedom to attend school and return home safely is a more important right for his son than the ability to go to Disney World. Since Cuba _does_ have those features, keeping _your_ kids here instead of sending them there must mean that you don't want them to be safe and healthy. Doesn't sound like the decision of a "loving father" to me!

In other words, jingoism is offensive and can "bite back."

Mighty big if. Read on.

> Moreover, if Mr. H. really does have some "inner circle" of disciples,
> you'd think he'd pick people with a little more discretion.

Discretion isn't the word I'd use; credibility and credentials are two that come to mind. None of those that you mentioned have either in my opinion.

Besides, setting aside for a moment any possible mistrust of a government official, should anyone with even a scintilla of common sense believe that the party charged with the cleanup would employ some of the offenders, when there are far more reliable, accurate, and CREDIBLE resources available?

Does the parable about the fox guarding the hen house (however misapplied) put this in perspective?

> Listening to these guys dance with glee over their "secret knowledge"
> is unseemly.

Actually, it's the dancing that's unseemly. The listening is just irritating.

You were on the right track when you mentioned the school kids and nah, nah, nah, nah, nah. That's just about the maturity level being displayed. They want listeners to think they are very important people, when in truth, they couldn't carry the restroom key of most anyone else on the bands.

Don't worry about it. They're as knowledgable about the future as n0vfp. Remember last year when he said that he KNEW WB2OTK was getting a NAL? He was very specific about that, and very wrong.

It's been my experience that the jackass with the loudest bray is the one with the least pull.

That apparently was the case.

> (2) The third party is not a prior amateur service licensee
> whose license was revoked;

Wasn't revoked.

> suspended for less than the balance of the license term and the
> suspension is still in effect;

The whole discussion will hang on the word "suspend" and its
derivatives. The letter of 8 July used the word "modification" in regard
to priveleges on HF, but left VHF priveleges intact. The ARRL used the
word "suspend", but not the FCC letter.

> suspended for the balance of the license term and relicensing has not
> taken place; or

Same discussion, and clearly relicensing has not taken place, so this
doesn't apply in any case.

> surrendered for cancellation following notice of revocation.
> suspension or monetary forfeiture proceedings.

There was no revocation or monetary forfeiture proceedings, so the
discussion above with regard to "suspend" still applies.

> The third party may not be the subject of a cease and desist order
> which relates to amateur service operation and which is still in
> effect.

Although a letter was sent on 23 July that warned about unlicensed
activity, that probably isn't strictly a "cease and desist" order.

So, bottom line, if he was suspended, he can't do it; if he wasn't, he
can. My guess is there will be some legal work done on this.

According to the book's "Publishers' Note", DeSoto *began* writing "200
Meters and Down" before starting to work for the ARRL, but continued
to work on the manuscript for "several years" while employed by the ARRL,
drawing on additional ARRL resources, before the ARRL published the book
in 1936.

The Wireless Association of America was the first organization formed
by Gernsback, while he was the editor of Modern Electrics. The Radio League
of America was formed in 1915, and was affiliated with his later magazine,
Electricial Experimenter.

In 1909, the term "amateur" normally covered both sending and receiving
activities, so the number of amateurs was much greater than the number of
transmitters they operated. It was common in this period to see
references about the estimated number of amateurs, then how many of them
operated transmitters in addition to receiving. (It's always interesting
to see the references to "Amateur Receiving Stations")

In January, 1910, Outlook Magazine estimated the number of amateur
transmitters in the U.S. as 4,000.

That information came from some full text articles from Electricial
Experimenter and QST magazines which I recently added to the Pioneering
Amateurs section on my web page at:
http://www.ipass.net/~whitetho/index.html
And again, it was the Radio League of America that was involved--as you
note, the Wireless Association of America was no longer in existance.

> >During this
> >period of time, neither organization was particularly objective, and it
> >is clear that anything written by members of either organization must be
> >taken with a grain of salt.
>
> Your opinions are based on falsehoods. DeSoto's work was written
> before he went to work for the League.

Again, much of what DeSoto wrote came after he started working for the
ARRL. And, in order to provide a full review of early amateur radio, I've
found it more important than DeSoto apparantly did to carefully review the
activities of Hugo Gernsback and the Radio League of America. In particular,
I wonder why DeSoto never reviewed Gernsback's claim to be the person to

suggest the 200 meter amateur wavelength.

I recently spent two days at the Library of Congress in Washington, DC photocopying articles from Gernsback's three publications--Modern Electrics, Electrical Experimenter, and Radio Amateur News--and found them to be tremendously valuable resources for information on early radio, both amateur and professional.

> I'm sorry, but with the grave errors you've committed, you have no

It's no different from people saying I'm going to "turn up the wick" to indicate an increase in power. They are colloquial expressions which are strictly speaking incorrect, but understood by many people. In fact if "straight, simple English" is the criteria, we would have chastise people who use "QTH" and other terms because these terms aren't "straight, simple English" either. We don't because while they are unnecessary, we understand them. The difference is that they as "ham speak", not the dreaded "CB speak".

The real problem is the ignorant individual who had the gall to try to impose his/her prejudices on others. If the conversation wasn't with him, then it was none of his business as such terms aren't illegal. If it was addressed to him, then a simple "what are you talking about?" would have been sufficient.

Mark.

The basis for the expulsion is still a violation
of law (i.e. copyright), and/or school rules. Schools
have historically been able to establish rules of conduct
that often go beyond the fundamentals of law.
The fact remains that the FCC could NOT expell
Bash in any case.

>>that didn't make it illegal...
>>That's what makes for court decisions in the first place.
>
>I can cite you many examples of people who break the law and are never
>prosecuted in a court. They have broken the law nevertheless. That Bash was
>not hauled into court is not proof that he didn't break the law...

You and I are entitled to our opinions, in the
eye of the law, Bash has never been charged and is,
therefore, not guilty of anything. As I said before...
the fact that Bash was NOT prosecuted and, therefore,
never found guilty simply "suggests" (i.e. it doesn't
prove) the FCC may have been internally unconvinced
of their ability to get a conviction.

Luckily I am not guilty. :) I never said it was beneficial. I am
just arguing against those who denigrate the individual operators and
those who are threatening to leave. If we are going to bad mouth
anybody, it should be the FCC, NOT the hams. Those who swear they
will not stay with ham radio because of restructuring sound too much
like "if we won't play by my rules, I won't play at all". We should
be concentrating on teaching (I still have much to learn) and working
on getting it changed back IF that is what people want.

Hopefully I won't get too much flack for this question. :) When I first became interested in Amateur Radio, I was told to obtain a copy of Now You're Talking and study and learn it. I did. I was told to get a copy of the code tapes and some computer programs and learn at least 5 wpm. I did (and better) My question is how the heck do you learn all the stuff you are supposed to know as a General + licensee? Simply memorizing the answers is not enough for me. I would actually like to learn this stuff. What do I study? Where do you find an elmer willing to teach this? Its not as if you can go out and buy the Advanced version of NYT and learn and listen like I did for the lower licenses. I have spent much time listening before I ever even keyed up on HF. Same thing with VHF & UHF. BUT the material we are talking about here, you can sit and listen forever and not pick up a fraction of it. Where does one go from here? And please no responses simply comprised of "find yourself an elmer and learn from him/her" LOL cause with all my long winded rambling I guess basically thats what I'm trying to find.

Yep, let's just agree to disagree...cause I am equally
certain that Bash would have had no problem getting
a defense attorney...probably from the ACLU. How any
such case might have actually then ended up just
can't be certain.

I think you've hit on the best method already; listen, listen, listen. That doesn't mean that's all you do. By all means get on and operate. Make some friends, work some DX, try some contests.

But whenever you hear a conversation that sounds like it has some meat to it, listen. Sometimes there'll be a lot of substance in it, sometimes, there'll be a lot of bs, and sometimes the folks will have it so wrong you won't believe it. But take in everything and as you get a larger database of information, you can learn better which bs to discard.

This is true of VHF as well. You should be able to hear some locals and get an idea of who knows stuff and who doesn't.

Then comes phase two. Ask. If you hear someone talking that sounds like they have knowledge that you want, ask them about it.

Reading is the second best method. In addition to monthly magazines, pick up a book or two on operating, theory, specialty information, etc.

One thing to remember, this isn't university. There is a lot of information that gets promulgated that isn't correct, because there isn't a system of checks and balances or peer review like in academia. Trust, but verify.

All of this won't happen overnight. That's the value in being old and grumpy; you've had time to gather all this information in.

Good luck.

LRod

Actually, that should read, "...assumed political asylum, if the
person desires it." Since a six year child is not able to make an
informed decision in this regard, children were normally excluded from
this in the past (they were routinely returned to their parents unless
some other overriding factor came into play).

2403. Re: Learning

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-22 00:00:00 UTC
From: kg4fet@aol.com
Message-ID: <20000422071404.19259.00001575@ng-ci1.aol.com>
Source record: 113164

Most of the information you want to find can be found on the net. I went through the same thing you are, and I recieved my ticket in NOV 99. The time since has been spent researching what I had questions about as I was studying. My "elmer" gave me a very old copy of the ARRL handbook and that is a wealth of information including circut diagrams and homebrew projects.
Good Luck in Your search for knowledge,
Sandor KG4FET

2404. Re: FT-100 or IC-70||g ?? DCS

Newsgroup: rec.radio.amateur.misc

>FT 100 has DCS tone code/encode . How important and useful is this ?

Depends on if you have repeaters in that area that use DCS rather then CTSS.
It does make for a nice conversation with a like equipt radio so you can "page"
the other unit. This is what the FRS radios use as their privacy codes.

>I would like to get your opinion about these two radios.
I personally use the FT-100 as my base radio currently and have enjoyed it so
far. The radio has been a great performer on uhf/vhf for me. If you plan to
use it on AM or CW I would get the optional filters for these modes. I have
listen on the HF bands and the reciever is very good for my situation. We will
see in a week or so how well it does on TX in HF. I could not be happier with
a radio I don't think. I have and would again recommend this radio to any one
looking for a good rig for base or mobile operation. I would be happy to
answer any specfic questions you have on the FT-100.

But it is no longer UNIQUE and this is the root issue here.

It used to be that ham radio operators we the ONLY people
in the neighborhood who could communicate in realtime with
people in other States and Countries, from either their car
or home.

This is no longer the case today. The public now has Internet, Cellular
Telephones, E-Mail, Chat Rooms, FRS Walkie-Talkies. Soon it will be
HDTV and Cable Providers co-joined with the Internet.

The UNIQUENESS of ham radio has been supplanted by newer and much less
expensive
communications technology, which is readily available to the General Public,
from WalMart
to Radio Shack and everyplace in-between. Again this is the reality of
today.

Face it guys, ham radio has become OBSOLETE. And that gentlemen, regardless
if you
choose to accept it or not, is the plain truth of this whole issue. I may
also add that in lieu
of all these personal communications devices, why should the public care
about ham radio?
Even Citizens Band radio is in decline! It's OBSOLETE technology also,
unless you drive
on the Interstates alot.

> No wires, no help from internet providers or telecom companies, just you
> and the other guy and miles of "ether."

Please try to send me a 3 megabyte MP3 file via the Internet, and via Packet
Radio
side-by-side. Guess which service will deliver it faster and more
efficiently?

> Relax and remember you're participating in the world's greatest hobby,

That is as technologically obsolete as the tube type radios many hams still run and
just as inefficent also. Sorry to keep harpin on this, but it's the truth that you hams NEED
to hear. Don't believe it? Read any article written by Wayne Green in the past 5 Years
concerning the outlook for this hobby. He's one of the FEW gems we have in this hobby that
knows anything about what is really going on, and how ham radio will probably be dead by 2015.

> Scott Rosenfeld ARS N7JI
> 541-684-9970 Eugene, OR Land o' much rain
> If you find me on the air, I'm probably in my car

Your a nice guy Scott, buy your sadly misinformed about the realities
of technological obsolence facing ham radio in the Year 2000.

2407. Elian was snatched

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-22 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8ds4qn$p2$1@slb7.atl.mindspring.net>
Source record: 113168

The house was raided this morning at 5:00 and little Elian was snatched up and taken to the airport to meet his father at Andrews. The Cubans tried to barricade the door and then burned OUR flag. OUR flag, folks! A lot of Yanks don't want to see the kid taken back to Castroville, I included, but his father had the right to spend time with the kid.The Miami Cubans have no special dispensation and must obey the law like everyone else and if they refuse, then boot them the hell out of here. Reno and the INS have been exceedingly patient with them and apparently Lazaro and the family would not cooperate therefore it was raid time. Hopefully after the reunion concludes, both dad and the kid will stay here but if not, the law's the law and we Elianers must be set for a disappointment. But to burn our beloved Red, White and Blue ticks me off to the Nth degree..how about you? CUBA LIBRE SI.....CUBA FIDELISTA NO! MUERTE A LAS COMMUNISTAS EN TODO EL MUNDO Y FELICES PASQUA PARA LOS RADIOAFICIONADOS NORTEAMERICANOS Y SUDAMERICANOS!

A mild contadiction to above remarks. In our area the number of ham radio operators has at least tripled in the last twenty years. The big changes are the methods and frequencies used at the present time. Technology has certainly helped a lot to promote ham radio. Even most hams have not heard of internet linking via ham radio. Over the last two years it has been and is still being developed by a few hams I know in the area. With as tittle as a hand held radio I can communicate to many cities in Canada, and a number of them that are on line in the United States. More are coming on line all the time. Eventually it will be world wide. I am all for the internet as it provides me with information and entertainment, and now with a brand new and very unique form of communications. But when the internet gets hacked or your computer crashes the ham radio operators that are prepared will still be communicating on the airwaves.

except that, generally, it's considered poor form to ring someone you
dont know up with your cell phone in new zealand. ham radio is
designed for that purpose; cell phones arent. and radio is its own
technology. just as there are computer geeks there are radio geeks. we
enjoy building stations, towers, antennas, knowing propagation,
etc...these are aspects that other technologies cannot replace.

>
>Face it guys, ham radio has become OBSOLETE. And that gentlemen, regardless

>on the Interstates alot.

those of us on the ham radio maritime mobile service net who
participated in the rescue of a young boy on a sailboat off the coast
of honduras know this is wrong. the boy's family was attacked by
pirates and he was shot. the ONLY successful means of communications

his family had was amateur radio.

as i was sitting in my shack last sunday morning, N4QDB/C6A called on
our frequency. he stated a boater nearby had a heart attack and they
needed an emergency phone patch to the coast guard to authorize a
night flight to a hospital in the bahamas. i quickly patched them
through and the flight was on its way in minutes.

these are merely 2 concrete, real examples of why ham radio is not
obsolete...merely philosophizing about the obsolesence of ham radio is
meaningless in the face of the reality of its usefulness.

>

The INS acted like Castro's "Black Squads" -- a bunch of people in masks
roared up, kicked in the door, tore him out of his bed and away from his
family, threw him in the back of the truck and left.

IS THIS WHAT YOU THINK THAT THE AMERICAN FLAG REALLY STANDS FOR?

I am ashamed of what my government has become.

The Illinois State Attorney of Cook County, has proposed legislation prohibiting harrassment or threats on the Internet. From the reported proposed penalty, threatening or harrassing via the Internet would be a Class 4 felony in Illinois, punishable by up to 3 years in prison.

STRICT LAWS URGED FOR NET STALKING
SACRAMENTO -- Federal and state laws should be strengthened to help curb the growing problem of online stalking, a U.S. Justice Department report recommends. Internet service providers, which link users to e-mail and the World Wide Web, report a growing number of complaints about harassing and threatening behavior online, the report said.

Try discussing inner tubes to Key West and see what they have to say.
Write it down, then bring it up next time with another Cuban. I've
heard that they have a set of responses on a prompt card.

I KNOW that the few of their media people who are given permission to go
off the islands are given a handful of canned responses to offer --
Cuban expatriate reporters and photojournalists use these as a way of
determining if someone really DID work in broadcast news there.

No, not at all. I AM saying the ones sitting on the bottom of the
Extra CW bands ARE some of the sour grapes Extras who are trying to
cause knee-jerk reactions to blame innocent newbies. It isn't
illegal, by the way to sign /AE to make it APPEAR as if you are a
newbie....

Same old sour grapes, trolling the ham bands for victims.

Dan, you are a TINY minority of Extra-class hams. Very tiny, indeed.

Tell you what. Look around the next hamfest you go to at the
nametags. Guess which Extras ever stood in front of a repeater and
which haven't. Listen for a month to the local club repeater, looking
up the calls of all the "technicians" who keep it all running on QRZ
and record their license class.

See why they call it "Technician Class", yet?

Yes, but I don't think those warnings were for jamming the Liberty Net. I suppose you could count the warning that WA9KJI received, but I believe that was for an incident that occured just prior to the Liberty Net, and besides, the warning was rescinded.

But now that I think about it, I remember hearing that W9ART received a warning. I don't remember if that was for jamming the Liberty Net or not .... so maybe I am wrong.

At any rate, the smaller amount of jamming lately is not due to any direct FCC enforcement on 3950, rather it is due to the jammer's getting cold feet. Saturday's jammer must have been wearing thermal socks, however.

Man, you must have very poor eyesight. The photo you're talking about on that page is the exact same photograph that has been shown everywhere (including on the front page of my local newspaper).

Anyway, no matter which copy you look at, the agent's finger is not on the trigger. In fact, on the enlarged versions, you can even see that the safety switch is in the locked position.

As for where the gun is pointed, it looks to me like it was aimed at the arm of Donato Dalrympie (the man in the green shirt holding the boy). The gun is aimed at the arm simply because that would have been the only clear non-lethal shot the agent could have taken at the adult (Donato was holding the boy in front of him).

But regardless, my friend. What does any of this matter? Even if the gun safety was off, the finger on the trigger, and the gun pointed at the boy, how does this effect the fact that nobody was injured during the raid?

All this nonsense is just an attempt to distract from the fact that the boy belonged with the father, not the relatives. And distract from the truth that raid was legal, done properly, and successful.

I'd like to flee from the US---BUT JUST TRY TO FIND A COUNTRY THAT WANTS AMERICANS!!! Even the Aussies don't want anything to do with us---and they are prolly the only ones in the world that like naive Americans---don't believe me, check with Australian immigrations!!! So, why are we suckers for the rest of the world!!!

Yes, but they were passive police agencies at the time (in other words, they didn't do actual enforcement themselves - they were supposed to allow local law enforcement make the arrests). Reagan changed that to allow these agencies to directly enforce laws. Because of those changes, now we have these agents knocking down doors and making arrests.

Now some might consider this a minor change, but it is always dangerious when you have someone from outside an area enforcing the laws (in fact, if you read the Declaration of Independence, you will see that it was a big issue even back then).

However, even more important is the manner in which these agents are trained to enforce laws, and the rules they must follow in the field. These are the direct result of Reagan's war on drugs.

Except for the fact that the FAA doesn't use the zero, I might try it on an
airplane.

Used to use it all the time on models and could depend on some soul to
inform me of that fact. The unusual transmitter flags from 53 Mhz also
tended to irritate the Model Police.

If we do 75, your call sign is more believable so you can add my age to
yours. As I believe you admitted to 54 on another posting, my 56 makes us
110 -- might qualify as a newbie :-)

When I used the word "created" in that context, I was trying to say
that Reagan and Bush "made them what they are." I didn't mean that
Reagan or Bush "started" these organizations or their law enforcement teams.

The simple fact remains, before Reagan and Bush expanded the authority
of INS, ATF, and others, to include direct law enforcement (as opposed
to passive law enforcement as Nixon designed), we didn't have government
"jack-booted thugs" kicking in the doors of people's homes.

You are the one who stated her authority was overturned, not
me. I was merely correcting your error.

>> 3a. Wasn't Janet Reno's authority to seize Elain overturned?
>> No, again.
>
>Yep. The Wednesday court appeal put her authority to take Elian in
>abeyance.

Nope. It stated that he could not be deported and must be
available for the hearing--the ruling did NOT state that he could not
(or should not) be returned to the lawful custody of his natural
father.

>>
>> 1/12/2000 Reno ruled that Elain should be returned to father's
>> custody.
>
>Reno has no authority to rule on ANYTHING. Judges rule. She is just a
>laywer -- the most that she can do is determine whether or not to bring
>a case before a judge.

An administrative ruling, in the absence of a specific law or
legal ruling, has the force of law. She is the lawfully appointed head
of the Department of Justice and therefore had the legal (and ethical)
obligation to determine whether probably cause existed to believe a
crime was being committed and what law enforcement response should be
enacted. In the absence of a court ruling, her decision that the boy
legally belonged in the custody of his natural father (under Federal
regulation to meet the obligations of the court order) and that the
Miami relatives were holding him illegally was a law enforcement
decision and well within her responsibilities as Attorney General.

>Uh . . .the United States doesn't recognize Cuban judicial opinion.
>Thus, the Cuban judge who awarded custody has no legal standing in this
>country.

A Cuban judge didn't _need_ to rule on custody. International
law specifies that in the event of the death of a parent, custody
immediately reverts to the surviving parent unless (a) duly enacted
laws of the country in which the child is residing specify otherwise
(they don't in the USA) or; (b) custody is specifically assigned to
another party by a court or relevant governmental agency in the
country in which the child is residing. Thus it is _US_ law that
required his return to his father, not Cuban law.

Take a closer look.

The missing tooth is on the lower jaw.

In the picture with his father, you can only see the _upper_
teeth, not the lower ones (which were visible in the first photo
because his mouth was open).

>Don't kid yourself, Reno CAN'T act without the PRESIDENT'S authorization.

Tell that to Monica Lewinsky or to Kenneth Starr.

Ha Ha, probably true. But, without all the rheteric, and barriers, we might have had a better opportulity to reel this guy in (at least a little). And we might have had a nice place to spend winter vacations.

But regardless, it is nonsense to view Castro as any type of threat to the United States like some Americans do (remember the movie "Red Dawn"). Heck, the Florida National Guard is almost as large as Castro's entire military.

My point is that much of the world we face today is the result of choices that were made many years ago. And not all of those choices were the best we could have made. Whatever the case, we should not stay locked in those choices forever. We have to look each day to see if other possible choices exist, and then pick the best choice for our needs today.

But the only way to do that is to get past the rhetoric and find the truth. Only then can we make wise choices about our future.

Instead of using this as a forum to blast Pozilla, why not try and be a bit more construtive? Personally, I realize this is a relatively immature (in other words "new") product and I would expect a few bugs. (Anyone remember products such as Windows 3.0, WordPerfect 6.0, etc.)

Try to explain the problem you are having with the product and see if someone here may be able to help out. Otherwise, quit griping and enjoy your new paperweight.

>>
> That would depend on his father. In this case, Elian's father
>hasn't seen the kid in 3 years.

Whoops! What propaganda have you been reading or, for that matter, propagating?

The father saw the child many times a week. He discovered he was missing when he went to pick him up from school.

A child belongs with jios father. PERIOD!!!!! Damin it! What sort of family values people are you?

I say this from the perspective of a father who had his son seriously interfered with by non-official do gooders who had an agenda that had nothing to do with his best interests. My son eventually died. So don't talk to me about substituting for the father's judgment for what is best for the child.

Bravo Reno!

Best thing the father could now do is spirit himself and his family out of the country and back to their homeland. But no. They will now be held prisoner. In this country.

Around _this_ newsgroup, I take _nothing_ for granted. It's
not only possible, it's actually likely, that at least some of the
participants _do_ believe Clinton could run for re-election. If the
"Weekly World News" club here can believe in a UN takeover, a Masonic
plot, or the Black Helicopter Brigade, why wouldn't they believe that
Clinton could be re-elected?

http://www.strongsignals.net/pastnews.htm

April 16
I just received the following from Melissa Goldman, wife of
Adam Goldman, President of Pozilla Software:

Adam wanted me to send you an e-mail. He was hospitalized
last Monday with a collapsed lung and the office has been temporarily
closed. While the doctors have released him from the
hospital, he has been ordered to bed rest for a couple of weeks. In the
interim, the
office is closed. If you could release a statement that
the office is closed and why it is closed, that would be very
appreciated. Please let
people know that e-mail will be answered at least once a
day until his health improves. I am doing the best I can to keep things
running
like now, but since I do not have the extensive knowledge
of scanners and the software that my husband has, I am very limited on
what I
can reply to. Please assure everyone that Pozilla is still
around and we will do our best to facilitate our customers.

I'm sure I speak for all of us in the scanner community when I
offer our heartfelt wishes for a fast recovery, Adam! Take care of
yourself and we'll be
here, waiting patiently, when the time comes for you to climb
back in the saddle!

Congratulations to Tony Gargano for taking delivery of a
Japanese version of the Icom IC-R3! Perhaps he will be kind enough to
share his thoughts on
the radio with us over the next, few days. That is if he can
pick up on the manual written in Japanese! ;-)

And yes, today was the day that Strong Signals reached the
1,000,000 hit mark! I want to thank all of you who have helped make this
THE place to
be on the Internet when it comes to radio monitoring! We have
all done a lot to help each other where we can, and I think the results
speak for
themself. Thanks for all your support, and long live the
monitoring hobby!

2469. need satellite [tiny] tx / rx ideas

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-23 00:00:00 UTC
From: Clark Savage Turner <turner@rome.ICS.UCI.EDU>

Anyone out there know of very small 2 m / 440 / or even 1.2
transmitters and receivers, preferably xtal controlled and
low power (1/2 - 1 watt out) for the tx, no need for high
sensitivity for the rx. We need to transmit simple PL
tones and, of course, ID in morse, basic stuff like that.
Separate rx for control.

We have the Alinco DJ-CxT "credit card" radios for prototyping
and things work for our minimum configuration, but the complexity
of initializing the rigs and resets leads us to simplify at this
point.

Appreciate any pointers at all.

Hmmmm . . .Webster's says this:

Main Entry: slav·ery
Pronunciation: 'slA-v(&-)rE
Function: noun
Date: 1551
1 : DRUDGERY, TOIL
2 : submission to a dominating influence
3 a : the state of a person who is a chattel of
another b : the practice of slaveholding

Main Entry: 1slave
Pronunciation: 'slAv
Function: noun
Etymology: Middle English sclave, from Old
French or Medieval Latin; Old French esclave,
from Medieval Latin sclavus, from Sclavus
Slavic; from the frequent enslavement of Slavs
in central Europe
Date: 14th century
1 : a person held in servitude as the chattel of
another
2 : one that is completely subservient to a
dominating influence
3 : a device (as the printer of a computer) that
is directly responsive to another

> Castro banned slavery shortly
> after ousting the Batista government, and the members of that government
> fled to Miami.

And why are people still fleeing to Miami, 40 years later? And why is
Castro spending all those millions of dollars to machinegun those who
try?

How many Cuban hams have you worked in the last few years? How many
Cubans have you met? Just what do you KNOW about Cuba, as opposed to

what you are told by those who support the Castro government?

Boy, do YOU need a history lesson!

1) Reno wasn't even Atty General when the initial assault took place

2) The initial assault was planned during the last days of the Bush
Administration, and the leadership were all Bush leftovers

3) One doesn't "sneak" by driving up a road and opening fire.

No wonder you haven't the slightest idea what you are talking about
regarding Cuba.

Actually, the jackbooted thugs are courtesy of the Nixon
Administration. So are both of the two main anti-gun groups, which were
started with the "assistance" of the same "retired" CIA agent.

Please point me to a "legitimate" report which states that there was
never a gun pointed at him.

Oh, BTW, I don't consider a report from the people who might have
pointed guns at Elian to be legitimate.

Well, a lot of what you think is wrong, so it is no surprise that you
DON'T think some things which are right.

You are currently 8 points toward the killfile, as being not worth
trying to talk with.

So let me see if I have this straight; the stuff that happened before 1994 was because of the Democrats, right? All those "feel good" years that you conservatives talk about during the Reagan administration then were due to the Democrats.

"Oh, no," you say, that was the great Reagan because he was the president.

Or, the corollary is; all the stuff you think is evil that has happened during the Clinton administration, since 1994 must be due to the wretched Republican congress.

"Oh, no," you say, it's all Clinton's fault, he is the President.

Oh I just love it when you people say this. You can't have it both ways, boys and girls. It's either congress or the president. You pick, I'll be happy to jump on it.

> gave her the authority (which Clinton supported, btw).

Uh . . .no. Check with the people who teach law enforcement at your school. A law enforcement officer (which is all that Reno is) must have authority granted by warrant to make a raid on a home.

> 3. Wasn't Janet Reno's authority overturned by a court? No.

A couple of lines up, you say she doesn't NEED authority!

> 3a. Wasn't Janet Reno's authority to seize Elain overturned?
> No, again.

Yep. The Wednesday court appeal put her authority to take Elian in abeyance.

> Here's the chronology:
>
> 1/12/2000 Reno ruled that Elain should be returned to father's
> custody.

Reno has no authority to rule on ANYTHING. Judges rule. She is just a laywer -- the most that she can do is determine whether or not to bring a case before a judge.

> 4. _Attorney General_ Reno did _not_ ignore the order of the
> court. She is required to insure that Elian remain in the US until the
> hearing in May (unless the court order is lifted), something she has

Uh . . .the United States doesn't recognize Cuban judicial opinion. Thus, the Cuban judge who awarded custody has no legal standing in this country.

> Rick Adams
> ke8hh@NOSPAM.arrl.net

> adamsr@NOSPAM.voyager.net
> Department of Social Sciences

Oh. Social "Science." I take back what I said about having no excuse
for ignorance.

How do you propose to do that? He is here because his mother was
fleeing Cuba on inner tubes. She was on inner tubes because the Cuban
government wouldn't let her take a boat.

> Is the history of child custody rulings in this country reasonably
> consistent that a natural parent has an almost ironclad right to that

Hi,

I am trying to locate a science of cambridge (Later to become sinclair) MK14 computer system.

The computer was avaiable in home built kit for in the UK and from what i am led to believe, most examples were sold to amateur radio enthusiast, as at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this NG)

If you have one, or spares, or indeed and sinclair items ie computers, calculators, radios, watches etc, working or otherwise, that you would like to sell, please email me as i cannot regularly get access to newsgroups.

I would also possibly be interested in early home computers from the 1970s and 1980s.

Thank you in advance.

April 21, 2000

Dear Newswatch Magazine Listeners/Readers:

People in America cannot seem to realize that we are the TARGET for International Socialism/ Communism, the Illuminati's "visible" organization of destruction to FORCE the world into a one-world-government. They have planned since 1930 for the day when they would "pretend" weakness economically, politically, and militarily to put the West asleep, as if there were no more danger from them, as IF they had realized they could never reach their goal of world domination.

Meanwhile, their Illuminati bosses behind the scenes would continue to have them build their military in secret for the day they would have the superiority in all phases of the military. Why does America remain asleep when China has threatened to blow up Los Angeles twice with long range nuclear missiles?

How can our people not realize their threat to world peace has only lain dormant UNTIL the voters of America could be deceived into electing one of their own to DISARM us militarily? Russia and China would continue to build massive numbers of conventional and nuclear weapons - and supply the know how to build them to their subservient states, such as North Korea, Iran, Iraq, India, Pakistan, etc.

This mighty military buildup is for the final showdown with the United States of America. When Mikhail Gorbachev feigned such weakness as a leader and put up a wonderful show of vying for power in the old Soviet Union with Boris Yeltsin, he instructed the Communist Duma that it was only a facade and should be shown no concern by the Party. He stated that Russia left the world of Capitalism in 1917-1919 and would NEVER deviate from the Plan of world conquest for Socialism as the first step in achieving world Communism.

Socialism is the essential first step to eliminate the middle class property and business owners. This is why Communism KILLS! To rid the earth of the undesirable class. Congress in Washington, DC, is loaded with closet Socialist who are passing legislation to Socialize America without our knowledge.

The ACLU was founded in part by Marxist Roger Baldwin. Every victory by the ACLU in the courts of America are designed to undermine America's Institutions - CHRISTIAN Institutions. They scream about the "Separation of Church and State," yet there is NOT one phrase that even resembles it anywhere in the Constitution or in the writings of our founding fathers!

Thomas Jefferson, who had NOTHING to do with the writing of our Constitution because he was in France, wrote a private letter to a friend once and mentioned the phrase but NOT in the way it is being thrown around today. Socialist/Communist ACLU members and the ignorant attorneys that misuse the phrase to destroy all concept of God are misleading the American people. The 33% Freemason judges uphold their secret Plan to destroy Christianity off the face of the earth.

There is a war going on for the minds of men and women and their children. That battle is between Atheism and Christianity, between Capitalism and Socialism, between the free enterprise system and corporate socialism the world over. There is a siege of America and the British peoples from Communism, Socialism, Marxism, Corporate Socialism, Corporate Capitalism, Internationalism, the Bilderberger billionaires, the Marxist Council on Foreign Relations, the Atlantic Alliance, NATO, the United Nations, President Bill Clinton, British Prime Minister Tony Blair, the Rhodes Scholars, Yale University's Skull & Bones, the Jesuits, and on and on, to merge us into their glorified world government of TOTAL SLAVERY.

When you can't buy or have credit without a Social Security number that was to be absolutely private and NEVER used for identification, you will not and are not free. The money barons control us in every thing we hope to achieve. When the Federal Reserve System SETS interest rates to slow down the economy, they are throwing people out of work - keeping people from purchasing homes, automobiles, sending their kids to college, etc. The Bankers from the time America was settled wanted to CONTROL our money to prevent the nation from prospering and coming out from under their control. WHOEVER CONTROLS THE CREDIT OF A NATION CONTROLS BUSINESS AND COMMERCE AND FAMILIES LIVES!

There is always a lull before the storm. Americans think that peace has broken out and there are NO dangers left to threaten their lifestyle. WHAT A DELUSION! The world is more dangerous now than at any other time in history. There is a major problem when an Attorney General helps plan the burning of 86 innocent people to death without knowing them, but visits a 6 year old boy to send him back to Communism - when his mother divorced his father two years before he was born, and he only had occasional visits.

You can count on it - Elian is a diversion while the Clinton Administration is doing something else to eventually enslave us!

Sincerely,

David J. Smith

If memory serves, I don't think the FCC has EVER cited anyone for jamming the Liberty Net. That is most curious considering that the Liberty Net is jammed EVERY time it is on the air, and that the FCC is certainly aware of the jamming.

One can only conclude that the FCC's enforcement actions, or lack thereof, include political considerations. Since the Liberty Net is often critical of Clinton and the federal government, my guess is that the FCC has been told to look the other way when the Liberty Net is jammed.

If I recall correctly there have been a few that have been "warned" and most of the jamming stopped. I'm sure you have even noticed that.
As for some type of government "hands off" policy concerning the jamming on the Liberty net. Don't be ridiculous. I think you give way too much importance to the net.
To say that the government "allows" the jamming to continue is to say that the net has some "effect" on the government that they don't like. I say that's absurd. The jammers on there now are "new" ones.
Guaranteed.
As for the signal supposedly coming from either place in Indiana - believe me - it isn't. I suspect that if it continues Riley will get them also. Only this year i don't think he's being so understanding or compassionate. We'll see.

How many more lies do we have to read from this idiot ? Several people I've talked to in the state of CT on HF have voiced the same idea: "put your hip waders on when you read what this guy says."

Another guy like K1 Zooming Moron who thinks he's a DJ.

Look, I don't mind working these new upgrades. They were the hams I talked to while they were in the Novice, General and Advanced portions.

This has less to do with new hams for me than an ARRL who thinks people with JD's, MD's, PhD's and Masters, or even a BA or BS are stupid enough to believe their B.S.

I'm an ARRL member, who knows they don't LISTEN. The problem that exists with most hams on air is the one that ARRL makes its policies by. Ignoring you, the member. But propaganda like this is absurd. Tongue in cheek GARBAGE that has no place in an "official journal" (mark me, it'll say this in June QST). It's also a lie. Been on 24.925 lately ?

Amateur Radio Survives Transition to Restructuring

NEWINGTON, CT, Apr 17, 2000--Despite
dire predictions from some quarters, the
"Big Day"--Saturday, April 15,
2000--dawned with nary a "10-4," a "roger
beep" or "echo box" to be heard on the
Amateur Bands.

Is this guy for real ? Anyone with the power of independent thought knows this will occur SLOWLY. What a fool. He'll be getting a recording from me on CD as soon as I start to hear it, with a nice note refreshing his feeble mind.

During the first weekend
of restructuring, fledgling Generals and
Extras were out in force on the HF bands,
trying out their upgraded privileges and
proudly appending the required "interim
AG" or "interim AE" to each ID.

How can you be proud of a hand out ? My degrees would be so much more valued and the skills so much more useful if I hadn't had to learn them.

ARRL Hudson Division Director Frank Fallon, N2FF, was among those
urging veteran hams to put out the welcome mat to all newcomers. ...
Fallon advised experienced hams to be generous with their help, to be

tolerant of mistakes and to be "friendly and tactful when you offer suggestions for improvement."

Frank ? Who was sending a repeated SSB "CQ Contest" in the CW portion of the "Gentleman's Band" ? Here's some tact. Keep your monotone DVR the hell out of the CW portion of the band, "A-1 op".

From horse's mouth...

Among ARRL Headquarters staff members caught up in the
restructuring upgrade wave are Penny Harts, N1NAG, Carole Dimock, N1NAM,
and Mary Lau, N7IAL, who upgraded to General, and Mike Tracy, KC1SX,
and John Bee, N1GNV who upgraded to Extra.

========
I know I said I wanted to hear more black operators, but not that lazy
bitchy receptionist. If she had to exist in the public realm,
she'd have been out on her ass 35 years ago, not sitting there watching
"The Price is Right" every day, answering the phone with a miserable,
tired sounding "A Double ARE EL" from 9 AM. This woman doesn't even
muster a damned "thank you" if you buy a book and keep her EMPLOYED. I
sent 3 other amateurs in besides myself- same thing EVERY time.

Mary Lau should be more concerned with her girth and keeping her husband
away from the types of laser experiments that likely precipitated his
stroke, rather than upgrading.

What kind of organization would allow its equipment to be used for such
purposes ? Anybody who knows anything about laser optics knows the
pressure generated on the eye by a laser focused into it can cause
pressure and a stroke.

Mike Tracy ought to get some telephone skills. Cro-magnon grunts went
the way of, well, you know...

John Bee ? Don't know anything about the guy, other than to say, "Hey
ICOM, I want to sell you more ads now ! I too upgraded and am a good
poster child for the new structure !"

So folks, what a shocker. ARRL staffers ("staffers": it makes
them sound like they're as important as Congressional employees) who
took advantage of a hand out ? That's the contents of their entire CV. A
hand out. Sitting on their asses, writing about nothing. Repeating
themselves ad nauseum for PAY.

[No, I'm not jealous, wise ass. Repetition for pay is for the braindead
working for retirement from ARRL, followed at 67 by a third "career" and
simultaneous government handouts, as a goal]

The same reason Haitians, Dominican Republicans and a host of other caribbean
nations are coming to America. They want a piece of the American Pie. If
Castro wasn't in power there still would be many Cubans coming to America.

When Castro loses power or dies you will see a great upheaval in Cuba
when the old landowners go back to reclaim their land, demanding back rent,
just as it occurred in some former Warsaw Pact countries.

I disagree with the way that Bill Clinton handled this whole situation
and was disappointed in him resorting to such tactics. All they had to do was
get a court order to make them comply, if they did not then the relatives would
have been held in contempt of court and jailed. Is this the way the government
wants to settle all disputes involving child custody? If so then the results
in the future could be deadly and disastrous.

So it is claimed. There was also a picture published of a happy
Elian with his reunited father showing in his big smile, two teeth
that were clearly missing only a few hours before.

Getting STRAIGHT information is precisely the challenge in this
matter.
>

Yes, I know. Been there, done that. I live in Chicago, and have
had conversations with Cuban ex patriates who left Miami for that
very reason. And their descriptions of life in Cuba directly
conflict with the sanitized Dan Rather version.

Hey old goat, or should that be ignorant old goat? Just out of
curiosity who the hell put all this together in the first place? Yeah
thats right the Technicians, the Generals, the Advanced and believe it
or not the EXTRA's also. Sure wish I would have known I was such a
problem. I never would have built my linked 2m repeater to 29.6 and
52.525 FM. I never would have helped work on the CHEAHA repeater here
on the highest mountain in Alabama.

And I would also like to apologize for being on SSTV in the early 70s
when we used P7 Phospor tubes and NO COMPUTERS. I'm also sorry for
building up a functional RTTY setup, without computers and modems. And
I'm especially sorry for working the early OSCAR satellites with my
modified Gonset transmitter and homemade 2 meter array.

And finally I'm so sorry to have been ONE OF THE FIRST 2m packet
stations in ALABAMA and also on 10m 1200 baud. And yes I use and LOVE
CW. So stuff your attitude where its dark. People like you are whats
wrong with Ham Radio today. An old grump with no life.

Dan/W4NTI

I'm happy someone remembers!!! Next time you spoon sugar in your coffee
remember that the world's largest sugar producer and one of our
countries most wealthy is Cuban---and lives in South Florida. Kevin...
don't forget the holdings that the Mafia had in Cuba with their gambling
casinos and allied 'trades' that was lost when Castro took over.
There's plenty more to this story than what Rush, and his lackey, Drudge
are saying.

I purchased a CD-ROM covering all 9 volumes of Police Call, 1999 1st edition from Grove Electronics in Feb. 2000 for $34.95 US.

I cannot get the CD to install properly and have had virtually NO support from "Pozilla Software" who is the writer of this data base.

I have made countless calls from Feb. to present with unreturned calls.

So much for their help line and customer care. It is none existent.

Think twice before you throw your money away on this product.

So far it sits gathering dust, totally useless to me. It does NOT function!

Pozilla Software has a great "I don't care about the customer" attitude.

I'm curious, Don...

If it had been up to you, when would you have decided that enough was
enough, and prompted police action? Never? If so, then you've defined
a scenario where a small determined group in a siege situation can win.
This kind of precedent cannot be allowed!

On the other hand, I agree that the kid would probably have a better
life in the US, but that doesn't override parental wishes.

Curt Breneman
KC2EBP

(p.s. It's not fair to call the Federal Agent a "Nazi". In rational
moments, you must agree that these kinds of forces are necessary for
certain kinds of high-risk law enforcement. Imagine what the country
would be like if we didn't have means to deal with dangerous entry
situations.)

There are no father's rights in Cuba. Why do you think his mother
died trying to give her child a better life.

I must admit, however, with the way congress is trying to control
every aspect of our lives these days, I am not entirely sure we
will be offering much better in the near future.

2515. 2000 Newsline Young Ham of the Year Nominations Deadline: MAY 30, 2000

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-23 00:00:00 UTC
From: n5zgt@swcp.com
Message-ID: <39036641.19041693@news.swcp.com>
Source record: 112929

Do you know of a deserving youth Amateur Radio who could be a candidate for the 2000 Newsline Young Ham of the Year Award? This bit of information is for you. Please spread the word to all Amateur Radio operators and Amateur Radio clubs you know, and consider nominating that young individual who has contributed to the betterment of Amateur Radio. Nomination Deadline: MAY 30, 2000

The nominating period for 2000 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details.) Any continental United States (48 contiguous states) FCC licensed Amateur Radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted BEFORE May 30, 2000 on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the 2000 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download from our website at http://www.arnewsline.org. With continued corporate sponsorship, the award presentation is scheduled take place this summer at the 1999 Huntsville Hamfest. The Huntsville Hamfest, Chaired by Mr. Scotty Neustadter, W4WW, is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracting some 7000 attendees.

And you listen to Rush Limbaugh and Matt Drudge as your sources of information?

These two don't know any more about Cuba than a couple of stray dogs would know. Of course, ignorance does not keep either of them from running their mouths. What is really sad is that are some people who are so ignorant they actually listen to these guys like they actually have something worthwhile to say. I guess this proves that no matter how stupid you are, there is always someone out there that is more so.

> Trigger? Yep, according to Reno, nobody's finger was on the trigger at Waco,
> either.

Man, to see people link this to Waco really pisses me off. Janet Reno was totally wrong in Waco. She allowed the armed federal agents to attempt to sneak into the compound with nothing more than a minor weapon's violation as justification. When that resulted in a shootout (and the whole Waco incident that was to follow), she blamed everyone but herself.

This incident is nothing like Waco (and to say it is harms the public's positive view of the incident at Waco, what little positive view there is). In this case, a child was being held against the will of his parent (not so in Waco). Serious crimes were involved (not so in Waco). Potentially violent protesters, who did eventually turn violent, surrounded the home where the little boy was held (not so in Waco). The police entered the home after knocking on the door (not so in Waco). Nobody was injured (not so in Waco).

As much as I dislike Janet Reno, her agents obviously did the right thing this time. Its just sad that so few conservatives will let go of their hate of Reno long enough to see that.

And Turkey was one of America's "BASE OF OPERATIONS" in Europe and one of the lauching pads for our nuclear missiles, remember? Of course, I could just as easily use the words "germany," "italy," or "south korea," in that sentence. We had Russia completely surrounded with nuclear missiles (and we are the only countyr that has actually used nuclear weapons against another country). With all that in mind, it is really not that strange that they would want to use Cuba to do the same to us.

And, considering how we treated Castro after he came to power, it is not really that strange that he would turn to Russia. One can only imagine what might have happened if the warmongers of that time period had treated Castro differently.

You're talking about stuff that happened thirty years after Castro came to power, and twenty years after the cuban-missile crisis. None of this stuff would have happened had we treated Cuba differently after Castro came to power.

F.W.I.W. Ham radio provided needed emergency communications during the hurricane season last year when all other forms of communication, cellular, landline (including Internet), police and fire systems were shut down by floodwaters. I read of a young, teenaged ham operator who responded to his local EMA and provided non-stop communications via a 2meter rig and a mag-mount antenna for something like 2-3 DAYS! His was the only means of communication this area had in that period of time.

Most of the spotter groups here in the mid-west rely on 2m/70cm ham radios for weather reporting because these are the systems most likly to still be usable if/when severe weather strikes.

Even relatively small area disasters can disrupt normal communications. The Okla. City bombing is a case in point. The cell towers and landlines in the area were gridlocked and as such unusable in the first 3-6 hours after the bomb went off. Even police/fire/EMS radios were jammed with traffic and barely usable.

Practical example: I work in an industrial plant. This evening severe weather was forcast for parts of my state (Okla). I didn't have ready access to a phone, the internet was out of the question, as were TV and radio. But my trusty 2m HT kept me informed as to what the weather was doing. Cellphone? What would I do? Call the radio or TV station every fifteen minutes and ask "What's the weather doing now?".

Each technology has it's place. Don't count ham radio out yet.

Donald Burkhart wrote:
>
> God PLEASE damn Reno and her jack-booted thugs!!!

By the way, before you get too excited about the "jack-booted thugs," let me remind you that it was Reagan and Bush who created them.

Reagan, with his war on drugs, expanded the authority of more than a dozen government agencies (ATF, INS, IRS. etc.) to include direct law enforcement. Reagan arranged for the training of these new "jack-booted thugs." And his adminstration set the policies these "jack-booted thugs" would use in the field.

Bush continued with this effort by adding several more agencies (the Coast Guard, for example), and further extending the scope of authority given to these "jack-booted thugs."

And let me also remind you that it was Republicans, in both the House and Senate, who cheered when Reagan and Bush did this. These congressmen had no problem with these "jack-booted thugs" as long as they were kicking in the doors of drug dealers and "those" type of people.

Of course, when the "jack-booted thugs" started going after conservatives, then they started getting upset (not upset enough to actually do anything about it, but upset enough to get votes from gullible conservatives who are fooled into thinking they actually care).

And, in Waco and Ruby Ridge, those "jack-booted thugs" used the training they received under Reagan and Bush to impliment the field policies they also received under Reagan and Bush. The result is a lot of dead people.

Clinton, and Reno, just inherited these maniacs - they didn't create them. Blame the Republicans for that. The Clinton adminstration has done a lot to reel these "jack-booted thugs" in since those earlier incidents, and the relatively "clean" raid on the home this morning was the result (nobody was injured and no excessive force was used).

As a conservative, it pains me to have to admit that Clinton actually may have done something right this time. And it really pains me to ask why the Republicans in the Congress did not?

Sure. We have 4 repeaters with autopatch around here on 2m and
440Mhz. You just can't talk about "business" on ham radio....unless
you're making a call for reservations at a motel, which was granted to
be ok or to a restaurant to reserve you a table....

Our club repeater works both ways. Incoming calls are screened by a
password DTMF sequence only licensed amateurs have. You can also call
the unpublished repeater number and leave kg4zzz a voice mail if noone
answers the phone call, it reverts automatically. Zzz then accesses
his repeater-based voice mail when he returns to the air.

It's much too complex with all the commands you have to memorize to
use it, though. It's much simpler just to use the cellphone which
forwards to my digital storage voice pager.

Some ham repeaters also support POCSAG or two-tone paging. The hams
have regular pagers set up on the repeater frequency and the repeater
has a paging terminal on the phone line, in addition to its voice
functions.

Of course, all this means nothing in ham radio wallowing in the swill
of CW vs No CW. All these great functions are installed and
maintained by low-life no-code technicians who can't copy 20 wpm, but
are excellent systems engineers and technicians. The no-coders are
the ones, not the Extras, who devote countless hours climbing 2000'
towers to put up amazing antennas, building facilities (even buildings
themselves) to house it all in, installing new equipment, spending
hours configuring software, pulling hardline up the tower, etc. They
are always to be ridiculed on HF and amateur newsgroups and webpages
by those not so gifted, whos only claim to fame and control in their
lives is that they can copy 20wpm Morse, but haven't a clue when it
comes to paging terminals, receiver voters, UHF remote base links,
topo coverage mapping, TNCs on digital modes, FM transmitters,
duplexers, diplexers, magic rings and remote recievers so the HT in
WalMart can call home on the autopatch running only 100mw. No, they
can copy CW....just like the guys on spark!

How sad......
Larry W4CSC
Old goat since 1957 with enough brains to get the hell out of the way

>
They could but most hams don't have the millions of dollars cellular
equipment costs to install it. Maybe some day we'll have cellular ham
radio when the cell companies want to dump old analog equipment they
no longer use on their increasingly digital systems. That's how hams
got interested in FM VHF/UHF....free equipment noone wanted.

My answer is this: you don't like Clinton. You don't like Reno. You don't like Democrats therefore anything done by one or a combination will evoke a hostile response. This is all political to you. The Justice Department, INS and Clinton showed more than enough patience, compassion, restraint and understanding but when confronted by an unrelenting, pompous, arrogant and defiant family, HAD to act in order to maintain respect for the law. I'm sure if a Republican Prez. were in the Oval Office and Reno were long gone, you would be praising government action to the sky whether the INS barged in adorned with riot gear or a tuxedo. The pix being circulated is one out of context. The agent was not pointing the weapon at the kid however government bashers will have a field day with it. If George W wins in November you'll think that Jesus himself came down to govern. If Gore wins, we'll get the same anti-government bullbleep we've heard since '92. Rush Limbaugh is certainly rooting for Gore or else that slob is out of a job. Who's he gonna bitch about and try to turn listeners against?

You are a piker, Mr Stewart. How about French Indo China? Had Roosevelt lived (or bothered to tell Harry Truman) we would probably have kept the French from reclaiming the territories much as what was done with the Dutch East Indies, given the whole shooting match to Ho Chi Minh, and saved a lot of people my age from one very nasty conflict.

Were it not for political considerations and a senile Senator from North Carolina we would long since have pronounced Cuba below our threshold of interest as a great power and allowed economic reality to take its course. Much like we are doing with Nam while no one is watching. And don't tell me about MIAs: we just got back four sets of remains from Germany -- while they disarm another bomb. Hell, the French have a crew handling artillery shells from WWI and get an occasional skeleton.

I tend to be of the opinion that Fidel would have been Fidel pretty much with or without us but our conduct left everything to be desired. We have gone thru anti-Bolshevik flaps at various times, coming closer to a coup in 1917-1921 than we care to admit, putting most of Nazi intelligence on the OSS payroll, and using 'who lost China? (answer: Chaing Kai Shek)' as a slogan to beat up on everyone who was not a posturing foe of 'atheistic Communism'. Having been beaten up with that piece of crap by Republicans for years, it should not be too surprising that a Democrat (Kennedy - and the Nam is his, not LBJs) would take a stupid risk after everyone including MacArthur and Charles DeGaulle told him he was an idiot.

So yeah, I have a bit of a problem with leadhead sloganeering: it gets people killed.

I have a friend, who I won't identify , who is VERY active on CW
working DX since WW2 when he was Chief Radioman aboard a diesel sub.
He made the comment to me that he had heard 5 wpm CW down in the Extra
bands plodding along since Apr 15th and was mad about those "new
Extras" for doing it.

I told him to listen to the calls carefully and look them up at
qrz.com. Aha.....more sour grapes. The stations trying to start
something were ALL old sour grapes Extras who had had their licenses
for too many years, not the newbies who could care less about the CW
bands. My friend's reaction to them, a knee-jerk "I wanna kill them",
isn't like him. He's one of the coolest old guys you'll ever meet
(he's 77, I'm only 54..(c;). The sour grapes are trying to start
trouble on the Extra CW bands so they can go back to the FCC and point
the fingers at the newbies, like little boys in a sandbox tattling to
the teacher. How silly and childish. FCC may get tired of this
childish nonsense and simply abolish CW, like they have on other
services. Backfiring on the troublemakers and punishing great,
totally innocent CW operators, like my friend, in the process.

How sad it is that the old Extras are the ones killing ham
radio.....not those awful CBers and "welfare hams" we've heard all the
whining about for the last year. Also, how stupid, eh?

Larry W4CSC
Hello?? Is anyone out there with any brains, any more??

While I do not quite qualify as an old goat in spite of getting licensed in 1954 I can but second the emotion. Having done a bit of repeater work -- mostly as an Extra -- the fact that the whole shebang started at 146.94 because Techs in the olden days had only 145-147 was not lost on anyone with the sense God gave a billy goat.

Getting the Extra the hard way, FCC examiner and all, plus a few years doing it has, if nothing else, allowed me to say with great authority that it is a great wonderment that this hobby survived Incentive Licensing at all. AMEN.

BTW, Larry, do you think that between the two of us we might be old enough for the low end of 75??
:-)

You were comparing your PHONE BILL with the cost of your 2m equipment.
That's apples and oranges. YOU said a global cellular call would have a
large bill, as true as that is, it has nothing to do with 2m. I was
responding to your post.

Ham radio has value as an electronics training medium, but it's true
communications value is obsolete. We keep hearing about how the hams
will save the day when all other communications are down. I work for
one of the four largest telecomm companies in the US. Due to
competition and deregulation, the current phone network is unbelievably
redundant, the chance of a total failure is probably nil. The weak
spots in telecom are all exposed to weather, as in outside plant, and

with current diverse routing, even they aren't that weak. Once apon a time when there was ONE local phone company and ONE national connector, the chances of failure were much greater, and even then, it never really happened.

I listen to plenty of traffic on 2m, 6m, 1.25m, and shortwave. How many times can you guys do radio checks? <G> Unforunately, most hams are NOT all that knowledgeable when it comes to electronics these days. They THINK they are <G>, but most of them are simply appliance operating rag chewers. A typical ham's last piece of "electronic" experience was installing a mobile appliance in a vehicle. The only people I often hear talking about anything other than the weather or the last micron they adjusted their antenna are the losers on 3950 on Saturday night.

Could you fix, or at least troubleshoot to a proprietary component, your own HT?

I'm not a ham operator. I've studied all the tests, and every year I purchase the ARRL Handbook, as I am an electronics experimenter and it's a terrific resource. One of these days when I can actually get to a session, I'm going to take the simple Tech test, or whatever the current version of that is. I can pass test after test of the theory tests provided on the online test sites, for all of the license classes. I have ZERO interest in learning Morse code, so I'll never progress beyond the Tech, except for the commercial licenses which don't require code.

> >

That would depend on his father. In this case, Elian's father hasn't seen the kid in 3 years. But that point is moot. Claims by the Gonzales family that the father called to alert them of Elian's coming by raft are also moot. As are the issues of his welfare in his father's custody. The father has already told us that he will return to his village, while Elian will go to Havana. He will not be with his father. He will be with the Cuban authorities who will erase the memories of the toys, the puppy, the trip to Disney, and his mother, before being put in the cane and tobacco fields as part of his 'education.'

A boy, in most cases would be better off with his father. But that's not going to happen here. The only time the boy will spend with his father is the time prior to the plane landing in Havana. At which time Elian will spend his time with Castro's goons.

What about S.A.M.E? AM/FM broadcasts to a pocket radio? The HT is a
great way to keep informed, but it's not the only way.

It's a 1970 with a couple of grand and a lot of time in the drivetrain (polished, chamfered, balanced, degreed for max compression, no chrome...) The only way you'd see me in your mirrors is as I was passing you after giving you a head start. But you'd have to look fast after you heard me coming... <G>

I'm thinking of doing a complete front end suspension replacement on it tho.. When you go that fast, it floats, and steering around a curve in the road is scary. (now you know why I don't run it full out on the streets.) Plus, getting rid of the monsterous shock towers would allow me to change the right side center spark plugs without tilting the motor.. I love headers for the flow, but they're a pain in the ass to work around..

With the compression, the cam, the cam timing all added in, the idle sounds like the beginning oh 'Hot For Teacher'(the drums) and the car shakes like a good harley should.. Women love it..

The body is gonna get painted next year, but I'll see about scanning in a picture of it the way it is.. (gotta find a scanner)

Nope, not an expert, but not sour grapes either. This is a "discussion group", group correct? By sharing my opinion that dosen't agree with yours, I'm an "expert" with sour grapes? <G> I'll agree with you completely on the values of HF on the high seas, and to underdeveloped areas as you have cited. My primary thought is the amateur radio service vs. current, easily obtainable communications tools. That's where _I beleive_ (My opinion, hence discussion! <G>) the obsolete part to fit in. As for it being FUN, no doubt! The examples you cited? That's not where this thread started. It started on topics such as contacting others from the car on the way home from work.

Yes, it happened again. Another night of deliberate QRM-ing
of 3950's Liberty net. This time with organ music and record playing
for hours starting at 11:00 Central time. When are they going
to shut down the source of this QRM, which has been traced
repeatedly to comming out of South Bend ?

On Sat, 22 Apr 2000 17:23:05 -0400 (EDT), BurkSWL@webtv.net (Donald Burkhart) wrote:

>Excuse me? And you're an instructor at a junior college level? What
>court gave Janet Reno authority? And wasn't that recently overturned by
>a higher court? And didn't "Field Marshal" Reno ignore that court
>decision?

Answers:

1. Yup, I teach at a community college. So?

2. A _court_ didn't give Janet Reno permission. She is the Attorney General of the United States--her _duties_ in that office gave her the authority (which Clinton supported, btw).

3. Wasn't Janet Reno's authority overturned by a court? No.

3a. Wasn't Janet Reno's authority to seize Elain overturned? No, again. Here's the chronology:

1/12/2000 Reno ruled that Elain should be returned to father's custody.
1/19/2000 Gonzalez filed a lawsuit to block his return to Cuba.
3/21/2000 U.S. District court dismissed the lawsuit.
4/12/2000 Reno met with the relatives and ordered them to surrender Elian to the government for transportation to his father in Washington (she had the legal right to do so).
4/13/2000 The relatives defied the order. They also obtained an order from a Federals Appeals Court that keeps Elian in the US (note that it does NOT place him in the relative's custody--it ONLY requires that he remain in the US--thus Reno's order is NOT reversed by the court). At this point, the family by refusing to surrender the child to the government technically became subject to prosecution for obstructing justice, kidnapping, and several other offenses.
4/19/2000 The Federal Court extended the order for Elian to remain in the US until a scheduled hearing in May. Remember: This hearing is to determine whether Elian _may_ stay in the US, not to determine custody, which by law belongs to his natural father.
4/22/2000 After last-minute negotiations with the family again broke down, Reno ordered a Federal raid on the premises which resulted in Elian being removed from them and reunited with his father.

4. _Attorney General_ Reno did _not_ ignore the order of the court. She is required to insure that Elian remain in the US until the hearing in May (unless the court order is lifted), something she has

made it very clear is her intention. She was _also_ required to insure that Elian be returned to the individual who _legally_ has custody of him (in this case, his father), which she did.

Any more questions you need answered so you can develop an _informed_ opinion of the matter--or is your mind so made up it only confuses you when someone presents you with the facts?

>Perhaps a VOP letter is in order here...

Go for it--that way _everyone_ can recognize that you don't know what you're talking about instead of just those on rram!

Incidently, _speaking_ of rec.radio.amateur.misc, this topic really has nothing to do with Amateur radio in the first place--and therefore I'll drop out of the thread permanently at this point. If you have any _other_ areas you want clarified, by all means send me private email and I'll be glad to answer your questions so you can understand the subject.

What do you run it on, jet fuel? Compression ratios back then were
like 11.0:1 or 12.0:1; if you try to run it on today's gas, you get
yourself an oil pan full of piston chunks.

>no chrome...) The only way you'd see me in your mirrors is as I was

I used to have a 1970 Cougar XR-7 convertible. It had a 351 Cleveland
engine and air conditioning. Only 1977 XR-7 converts were made in
1970, even fewer had factory air. That was an interesting car.

Get your information straight. The father last saw his child on the Friday befor the ill-fated boat voyage. There have also been photos of Elian with his (then) 2-month old half-brother.

I also left Miami two years ago because of the Banana Republic mentality. It's easy to criticize unless you have lived in the area--you begin to feel you don't live the US anymore.

It's not quite that simple.

If you are using Internet Exploder, saving to a file from a PDF will leave
you an empty file.

Instead, go to the link to this file (or make a link), right click on the
link and select 'Save Target As...' from the menu.

WRONG! If you're going to blame someone, blame congress. Up until 1994,
congress had been controlled by the Democrats. This included the Reagan and
Bush years.

I don't think anyone can look at that picture, and not cringe. Regardless of what you think of the Elian Gonzalez affair, there was no call for such strong-arm tactics in a home where no violence had occured and no violence was threatened. Defying the government is not the same as committing a crime or posing a threat to others.
Yes, the agents were enforcing an order to turn the boy over to the his father, and Elian's Miami relatives were making that difficult. However, opposing government policy, and even being an outright pain in the ass is no call for an armed assualt.
Then again, given Butch Reno's track record, I guess we should be thankful that the house didn't get burned down.

In all the discussion that's going on about Elian it's been mentioned that the happy photo with the father was possibly faked.
Do I think it was faked? Possibly not.
However, I do believe that the photo was taken PRIOR to Elian's arrival in America.

Why?

It's amazing ... in a photo of the raid as Elian was being hauled out no one seems to have noticed a missing tooth.

What's the big deal?

In the photo released by the lawyers, his tooth has AMAZINGLY returned to his mouth!

The family wasn't armed and the last time an attack occured with peace talks ensuing was PEARL HARBOR!
The only difference is that the side that commmited the underhanded attack was Janet Reno's storm troopers.

Don't kid yourself, Reno CAN'T act without the PRESIDENT'S authorization.

I thought the day of unauthorized N*A*Z*I breakins was over.

The U.S. government wants guns out of the hands of the citizens for our "protection".
Wasn't that one of Adolph's 1st measures taken?
Those who don't remember history are bound to repeat it.

Mountain Meadows, 20 years AFTER the Exterminating Order (which was in large part the cause of the massacre). There are several good books on this, obviously you have never read any of them.

So:

1) The Fancher party included a number of men from Missouri, who bragged for weeks and hundreds of miles about what they were heading to Utah to "finish the job." They quoted the Exterminating Order as their authority to do so.

2) The Fancher train was not travelling the normal route to California. They also apparently made a turn away from the main trail, which took them toward a small settlement (rather than the larger town that the trail went right through). This was seen as a threat to that settlement.

3) These men (and perhaps others) also mistreated a number of the Indians that they came in contact with. There are no specifics, but those comments recorded indicate that rape of Indians was one of their amusements.

4) Brigham Young, when advised of the claims and troubles, issued a directive that the train be permitted to pass unmolested, and in fact to

be given whatever help they might need to speed them to California.
This directive arrived hours too late to stop the small band of Mormons
who had gone with a LARGE band of Indians. The party which went out to
pass this commandment to the Mormons (and try to pacify the Indians)
arrived near the end of the attack, and did in fact force a halt to the
killing.

No, it isn't. As I said, there are several good books. There are also
references in many others.

This is probably little comfort to the spirits of those who were raped
and murdered under authority of the Exterminating Order.

Why should I care what the "rest of the world" thinks? I've seen a lot
of the "rest of the world" and I'm not impressed with their morality nor
how they see the relationship between government and the people.

Apparently, neither were my Befores, or I would have been born in
Europe.

I did and there isn't any referance to that. Maybe you should read it
again

2573. Elian Unnnnn-Snatched

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-23 00:00:00 UTC
From: kk4tl@aol.com
Message-ID: <20000422204456.08116.00001718@ng-df1.aol.com>
Source record: 113060

Not really.

But listen to The Great Liberty Net tonight for more damning commentary concerning the matter.

Or listen to David J. Smith and learn that it was free-masons dressed as federal agents who snatched him.

Or listen to "Prophet" Stair and see how the Elian saga plays into a series of events marking the end of the world.

Troll-o-meters on?

2574. Take a break, read somethin funny for a change!

OK all you hams. it's time to take a break from all this
Pro-CW/Anti-CW, Frequency movie, Elian was abducted
by goons, BARF, 14313, 3950 bullshit.

Here's a real gem of a story I pulled off of stories.tasteless
that I think all you kids and lids in the RF sandbox will
like. Enjoy!

From: TheUnholyOne
Subject: THE MASTURBATING FAT GIRL STORY
Date: ----- --, 1999 --:-- PM

Here's a Tasteless Tidbit (c) from a BBS I belong to. 'Twas a
young woman relating an experience whilst working at a
library. I cut and pasted it directly, without editing, and
take no credit for it, except as its bearer.

Enjoy...

THE MASTURBATING FAT GIRL STORY

when i was in high school i worked in the children"s room of the
local public library. my job was to check books in and out, help
with storytime, shelve books, and keep the computers in running
order. the computer part also meant monitering the internet from
time to time, blocking the appropriate sites, etc. well at this
time at the library, chats were enabled. we had the same people
coming in to chat all the time. one of these wasa size extra
large 15 year old girl. yep, it"s your internet horror chat
partner--- you know the type. the type who says she"s 18, has a
perfect figure, blond hair and blue eyes and is a hot
cheerleader. of course it"s all lies. she was 15, fat, mousy,
and had coke-bottle glasses. i had complained to my supervisor
about her having cybersex on the internet... IN the children"s
room, NOT caring who was around reading the screen. but nothing
was done about it, until one fateful night....

it was a cold night out, late november. i was 8 pm, and i was
waiting for the last hour to go by so i could go home. sure
enough, in came "hotgrrl69" a.k.a. THE FAT GIRL. she sat down
and started chatting. i knew she was getting her cybergroove on.
but there was nothing i could do. it was hot in the library that
night. the thermostat was set at about 78 degrees to keep the
old biddies on the adult side warm. time went by slowly, and i

was about to doze off at the circulation desk, when the smell came...

yes, it was the sweaty smell of b.o. mixed with cheap perfume and rotten fish. i smelled it. my supervisor smelled it. the assistant smelled it. then we heard a moan from the computer. and another. the fat girl was sitting at the computer, taking turns fingering herself and typing. the odor was horrendous, the sight was even worse. right there, in teh children"s room, in front of the public, not-so-"hotgrrl69" was masturbating, getting her disgusting sexual fluids all over the keyboard and making the room smell like sweaty rank crotch. my supervisor pulled me around the corner into her office and said "go kick her off the computer. her privelages are suspended." i said "you kick her off. i don"t want to go near her." the assistant snuck away into the bathroom to hide. so i, being of the lowest rank, was blessed enough to have to go kick the girl off the computer. i want over, my nose plugged, and said "GET THE HELL OUT OF HERE YOU SICK FREAK!" as loud as i possibly could. the girl jumped up, started crying, and ran out of the library, pants unzipped and all, into the cold november night. i"m sure it was a sick sight of pale blubber jiggling down the road. i"m glad i didn"t have to see it. but the worst was yet to come...

my supervisor made me clean the keyboard, because she claimed she didn"t know how. i told her how, but she wouldn"t listen. so i got some rubber gloves and heavy duty antibacterial industrial cleaner and cleaned the keyboard and the mouse about ten times. then i went into the bathroom and threw up repeatedly.

thus ends our bedtime story of the masturbating fat girl.

yum.

>I LOVE those old Carl and Jerry episodes,

My all-time favorite:
The guys figure out how to produce different aromas by passing electricity through wires coated with various substances.
One of them takes this box on a date. When the movie shows pine trees, the aroma of pines floats through the movie theater. Same thing with a rose garden. At some point, he hits the wrong knob and fills the theater with the smell of burning rubber or something. Anyway, it is a disaster......

Second favorite:
The fellows are playing around with an oscilliscope. They have leads hooked to Jerry's head and are studying "brain waves". They compare the waves to a chart in a scientific manual. It appears that Jerry has rabies.
They later discover they are picking up signals from the nearby AC-powered clock on the wall. (whew! those shots are painful).

>> freeways?

Very few people stop, these days. However, a high percentage of cell phone users take advantage of the free calling system for reporting emergencies.

Stopping to assist can be very dangerous. Yeah, it looks like a lady standing by a disabled car. Then two male accomplices come out of the bushes and hit you in the head.

Oh, really? Just which massacres were done by or at the direction of
the Mormon leadership?

And, even if there were some, how does this justify ordering the deaths
of children, pregnant women, the aged infirm . . ?

No. Boggs was misled by third-generation information, and willing to
bring things to a rapid conclusion rather than taking the time to
consider his actions. Once committed to a course of action which he
realized (too late) to be abhorrent, his only options were to admit his
error or pour more resources into the plan and execute it at an
accelerated pace, then bluster to hide his incompetence.

Kind of like Janet Reno, both in Waco and Miami, and Clinton following
those two abuses of Federal power.

> So far as I can tell, Elian was being used as a hostage in a political

No Doc every option WAS NOT taken. They could very easly just let the Supreme court handle it. But no....they had to show US who was in charge. And boy they sure did....Just like WACO, and Ruby Ridge. Boy they sure showed us didn't they?

You know I used to call them Commies and Socialists, but I was wrong...They really are Goose Stepping NAZI STORMTROOPERS and YOU OF ALL PEOPLE should be able to see that.

And as for burning the flag....hell after what they THOUGHT this country stood for and seeing this episode...who can blame them?

So let me see if I have this straight; you get a photo you don't like
the looks of, then you get another photo you do like the looks of. How
do you tell which one is "real"? The one you like?

Anyone who has ever done sampling knows the fallacy in trying to
determine the the correct of an "A" or "B" answer from only two samples.
Harrumph.

I always get a kick out of the "liberal media" shots. Colonel McCormick
(Chicago Tribune) rolls over in his grave every time someone says it.

Gee, Perfesser, maybe they know something that you don't. After all,
they are the ones who braved gunboats, sharks, exposure and drowning to
leave the Carribean Revolutionary Worker's Paradise.

And it was Castro who ordered the deaths of thousands whose only crime
was wanting to live elsewhere.

I dunno about you, but a reasonable man would have to assume that the
Cubans in Miami might have as good a reason for their "strong personal
feelings about the Castro regime" as do Jews and Gypsies about the Third
Reich.

| > 147.060 -.600 7digits*/# 100.000Hz
|
| Continuous Tone Coded Squelch System. It's a subaudible tone that's
| continuously transmitted whenever the transmitter is keyed, and in
the
| receiver a tone detector, upon receiving the correct tone will open
the
| squelch in the receiving radio.
|
| Motorola's trade name is "Private Line", which is short cut to PL
and is
| the name most hams use to describe CTCSS. GE's name for the same
| arrangement is Quiet Channel and RCA's name is Channel Guard (or
vice
| versa).
|
| There is a system of standard tones and code names (for example,
100 Hz
| is 1Z) that you should be able to find in the ARRL Repeater
Directory,
| or possibly somewhere on the 'net. Some radios will allow the
| frequency to be programmed directly, some use a digital/binary
system,
| and some use the standard code names.
|
| Most VHF (and some HF) radios sold in the last 15 years have PL
transmit
| capability built in. Usually a PL decoder is an option or just not
| available. It's usually easer to add aftermarket encoding than
| aftermarket decoding. Check the manual of your radio for
capabilities
| and methods of use.

```
|
| In the early years of repeaters, PL was used to make a repeater
| "private", a concept many amateurs find contrary to the idea of
amateur
| radio. Within the last 15 years it's used more to resolve
co-channel or
| nearby same-channel interference problems. It's also sometimes used
to
| resolve 2A-B intermod symptoms.
|
| Hope this helps.
|

From: LRod <lr0d@my-deja.com>
Message-ID: <8dtt1sltq1@nnrp1.deja.com>
Source record: 113074

Well, there sure has been a lot of rhetoric thrown around on this. A couple or three people have it almost exactly right, and then there are some that are so blinded by their political agendas that they can't see straight.

How about looking at the situation this way: let's take Castro/Cuba out of the story entirely. Let's say it was a refugee from, oh, Montserrat, who's mother was trying to get him away from the evil vulcan goddess Pele.

Now, we have the father calling from Montserrat and asking for his son. What's your opinion now? Seems to me the issue is one of the father's right to regain custody of his son.

Is the history of child custody rulings in this country reasonably consistent that a natural parent has an almost ironclad right to that custody? As controversial as you think this is, you should have been living in Illinois as I was during the time of the "Baby Richard" case. Rightly or wrongly (and it was emotional) the final ruling on that one was for custody by a natural parent.

Consequently, the Miami Gonzalez' case for keeping Elian was certain to lose in the courts. In fact, when a ruling (as good as a law, when made by an authoritative agency, until the courts rule differently) was made that the child was to be turned over for transfer of custody, the die was cast.

What did you anti-government people think should be done at that point? The instruction from the government was that the child was to be turned over. They refused. What should the next step be?

Now you can put Castro/Cuba back in the discussion. It doesn't change anything. Some of you want to make some sort of political and/or international incident out of this. It suits your political agenda. But to your shame, it does nothing for Elian and his father.

According to reports, there were negotiations going on until late Friday night concerning how the transfer should take place, but they broke down. How could they break down? The Miami Gonzalez' either turn over Elian as instructed, or they don't. If they had obeyed the law, as all citizens are compelled to do, there wouldn't have been this story.

But they CHOSE not to obey the law. Such a decision has consequences. Do you think the government should have just said, "oh, okay," and put on another pot of coffee?

For the moment, let's forget the hyperbole about "hostage rescue," "extractions," "invasions," etc. It was the responsibility of the government, like it or not, to get Elian out of the house, safely for everyone, since the family wasn't going to obey the law. If you understand anything at all about those sorts of circumstances, you know that Mr. McCollum's analysis of tactical maneuvers is exactly correct (reprinted here without his permission):

A: At the end of the day, the good guys go home to hearth, family, and a nice warm bed.
B: If force is to be used, bring enough to ensure that no one is tempted to do anything stupid.
C: Maintain the initiative. Get the doors open and the occupants concentrated quickly, again so no one has the chance to barricade or do anything stupid.
D: Intelligence is never 100 percent.

You government bashers would have been first in line to criticize if they had gone in caually at 2 in the afternoon and got shot to pieces inside, or worse, got messed up by the mob outside. What a proud group of citizens those are.

It's like an analysis of combat air patrol tactics I saw recently. A fighter pilot being interviewed said, "it isn't about a fair fight. It's about getting there with the biggest, baddest force you can, get the job done, and go home." (paraphrased)

The thing that is so obvious to me that no one has mentioned is where the responsibility lies in all of this (the internet goofs blame it on the President, the Attorney General, the horoscope, the Masons, etc.). I think it's clear: the Miami Gonzalez'. I'll concede that their fight through the courts had a sympathetic strain, given Elian's mother's flight and death, but once his father said, "I want him back," the saga should have ended.

So the Miami Gonzalez' must take responsibility for any trauma suffered by Elian (or themselves) and for making it necessary for the government to carry out the procedure that they did. They are the ones that brought this about. At any point in the proceedings all they had to do was say, "we will surrender Elian to his father in accordance with the law of the land we were in such a hurry to come to and live in."

Just tell me, oh government haters, what would you have done? Give me a complete scenario.

Elian was taken from the relatives at gunpoint. According to all ligitimate reports, at no time was a gun actually aimed at the boy.

> Though the news says no one was hurt
> they neglected to mention his uncle
> (great uncle?) being struck with the
> butt of a gun while his house was being
> INVADED WITHOUT A WARRANT at 5 AM.

No mention of the uncle being struck with a gun has been reported anywhere that I've heard. Where did you hear this?

Actually, I don't think a warrant is required if the police know that a crime is taking place inside the residence.

> Has anyone noticed that the press
> isn't being allowed to see the boy
> but <snip>

And that is the way it should be. I'm getting more than a little tired of the way the press inserts itself into these situations. In my opinion, the press made this a huge story with their constant coverage. They pushed both sides into taking the positions they did. And they did everything they could to stir up the protesters, both before and after this morning's action (short of directly telling them to actually go out and do something).

And then, on top of all that, we were treated to six hours of reporters talking to reporters this morning after the incident, like we really care what they have to say. They seem to think we have no intellegence (or that they have far more intellegence than we do). For example, whenever they interview someone, they always spend the next half hour telling us what that person just said (and then they have to give their opinion on what was said, like we really want to hear it).

And the amount of censorship is amazing. Did you notice how fast they cut off Castro when they realised he was talking about something they didn't want us to hear?

Mr. Gonzalez would be very wise to keep that boy as far away from the press as possible. The press has already done enough damage to that boy.

I wondered about this also, Reno stated on TV that they had tried every
way possible to get them to hand over the kid in a peaceful manner, but
what about just a couple of agents, in everyday dress simply walking up,
knocking on the door and explaining they were there to take him and
would they please turn him over without any incident. Certainly worth a
try. Then if they refused, they could go in James Bond style.

Or perhaps you don't know something that you should. Many of the older cubans living in Miami (the ones who fled as Castro took over, and who now own many of the business in the Miami area), are potential war criminals if relations are ever normalized with Cuba.

Many of these people were senior officers in Batista's military, which has been accused of killing many thousands of people in Cuba. Still others were members of the government. And still others were senior members of various police agencies. All these organizations have been accused of serious crimes against the people of Cuba.

These people have an interest in insuring that the cold war continues between the United States and Cuba. Just like many other war criminals at the time (german, italian, japanese, etc.), these people were allowed to enter the US because of the cold war - our country had backed these people in an effort to keep Castro out of power. Once the cold war is over, our government has no reason to continue to protect them.

And, by the way, there is one other group that I have not mentioned yet - the truly evil scum who controlled the wealth in Cuba at the time (the ones who controlled the banks, businesses, tourist industry, etc.). Even our own government was embarassed by how these people treated the lower class in Cuba (slavery was common and workers routinely abused).

When these people fled Cuba, they took the money with them (how else do you think they were able to purchase whole areas of Maimi). And when they did leave with the money, they robbed Cuba, and the cuban people, of the money needed to keep that country on its feet. The result was years of depression in that country, which was directly responsible for the deaths of even more cubans.

So, before you defend those people in Maimi, perhaps you should read about some of the things some of those people did before leaving cuba (I've only scatched the surface). After seeing those people flying our flag upside down, or with trash bags wrapped around it, I really would not be upset if our government rounded up the whole group and shipped them back to cuba on a very leaky boat.

Source record: 113080

OK, so I didn't have any test equipment at home, but I did have a set of eyeballs
and a soldering iron. I took the mike apart, drew the schematic and trace the signals to the DIN connector. Here it is:

Looking at the end of the mike cable din connector, the pins are labeled 1 to 6 starting with 1 on the upper right and counting clockwise around with pin 6 being the center.

5 1
4 6
3 2

1 is WHITE and is the microphone output
2 is RED and is the SPEAKER GROUND for the audio system which is why the speaker will not work unless the mike is plugged in!
3 is BLUE and is the PTT key and a ground here will cause rig to transmit
4 is BLACK and is the UP/DOWN function, down is ground and up is +v
5 is SHIELD and is ground
6 is BROWN and is the +MIKE supply

There is enough room inside the mike case to install a 1/8" stereo socket so that
you can bring audio in and key in for PSK control. You can take audio out from the socket on the back of the rig. You can also put a socket in the rig case to do
the same thing and solder the wires to the mike DIN male socket on the back but remember that the numbers will be reversed there.

While this rig has not IF shift or filters installed it works very good on PSK31. I
have been playing with it in the receive only mode for 2 days now and have been very pleased with its capabilities.

Have fun.

And your point is? The page you suggested we go to has two different photographs of Elian with his hair slightly different, and text claiming that the fact that the hair is different in the two photographs proves that one of the photo is fake.

All I see is a boy that has matted hair in one picture (from sleeping on it that morning), and a later photo of the boy with his hair neatly cared for. How does this prove that either of the photos are fake?

My hair looks different when I first wake up in the morning than it does after I take a shower and brush my hair. Does this mean that any pictures of me at either of these times would also be fake?

Slavery does not exist in Cuba today. Castro banned slavery shortly
after ousting the Batista government, and the members of that government
fled to Miami.

So you would let me take your son or daughter to some other country because they would have slightly more political freedom than exists here in the US? Why not? After all, like you said, its what "any loving father" would do.

Do I get to pick the country that I think has more political freedom, or do you reserve the right to choose that. And do you extend that same freedom of choice to Elian's father After all, he has decided - he wants to return to Cuba? So, why do you now suggest that he is not a "loving father" for making that choice?

Is that site normally ARRL's DNS server? A look at whois suggests another possibility - that ARRL's domain has been hijacked. The address information for the Adman contact has obviously been trashed, and both that contact handle and the arrl.org record were last updated on April 22. I suspect that someone discovered that the admin handle had been left open(far too many people do this - if you're a contact for a domain, don't leave your contact handle set for MAIL-FROM authentication - it's quite easy to spoof. See http://dnspolicy.net/articles/00/02/09/094220.shtml for more information on this), and moved the registered DNS servers for arrl.org over to the netfirms.com servers. Since (presuming they're not normally ARRL's DNS service providers) they wouldn't have any DNS records for arrl.org, arrl.org ends up disappearing from DNS.

I also note that netfirms.com's DNS servers appeared to be sluggish today. It's possible that someone did this to a bunch of different domains in order to overload the netfirms.com DNS servers. There was another incident recently where a bunch of domains got hijacked in this way.

This seems even more likely after looking at the arrl.net domain. The Zone, Tech, and Billing contacts are the same, the Admin contact looks sane, and the domain servers look sane (having the ARRL use a Canadian firm for DNS services just didn't look right). Also, DNS queries about arrl.org domains directed to the DNS servers registered for arrl.net return authoritative replies. This indicates that those servers are likely also supposed to be the registered servers for arrl.org.

I suspect ARRL will need to call NSI directly to get this fixed, as the contact addresses are undeliverable until the fix is made.

Meanwhile, use http://209.140.206.201/ instead of http://www.arrl.org.

>As for going the 'dumbing-down' route - I am in full agreement with
>you. I would only point out that this is not a new and sudden
>phenomenon - either in radio or in society at large.

And I might ask if the decline applies equally to those "Real Hams",
just in a different area. As you indicate, those of us who were
beneficiaries of the last round of 'welfare licensing' often could
depend on the friendly, encouraging, and patient help of the "Real
Hams" of our era. Has that gone downhill?

It takes little intelligence or effort to sit yourself on a pedestal
and berate those you consider below you. With a few exceptions, rare
enough to be regarded as 'personalities' ("CQ CQ CQ. No lids, kids, or
space cadets"), I don't remember the "Real Hams" of my ham youth doing
that. My perception is that there's a lot more of that going now than
there was 25 years ago when I first got licensed. I regard that as
just as much of a decline in standards as any changes in the test
requirements.

For those of us who have been in this hobby a long time, it might be
good to ask how we compare in attitudes and activities to the hams who
helped us when we were new. Passing license tests is no longer our
task - we've pretty much done that by now. Our task, as was the task
of the experienced hams who came before us, is to help teach, train and
encourage new hams to become good in both operational and technical
areas. If we can't do that, with just as much friendliness, patience,
and encouragement as was shown to us, if we can only sit back and
cynically berate new hams for not being 'up to snuff' in our sight,
then we're just as much a part of the 'decline in the hobby' as lowered
exam requirements might be. Perhaps more so.

That's good, because the most likely explanation is that the arrl.org
domain has been hijacked.

Of course, we wouldn't speculate either about what people have motive
to try to take down the ARRL site in this manner.

How about the new licensing exams?

Check page 73 of the May QST. They run a "License-in-a-Weekend" class. They "teach, feed, and test them in one highly intensive weekend." The recruits come from a notice placed in the newspaper "and before they realize it, they are licensed radio amateurs". So much for knowing the material on the test...

>

This is a bunch of complete and utter nonsense. Violation of WHAT?

I could use an autopatch from my car to call my wife at home and ask her if we need anything at the store. Then I could say, "Gee, isn't this club's autopatch great? Think of all the money we're saving by not paying Airtouch for this call." You think the FCC is going to come knocking on my door to pull my license? How ridiculous is that?

Cell phone use is cheap now. But it wasn't always. You don't think there were hams out there who used the autopatch as a cell phone because a cell phone was too expensive? I've heard some of the unlettered ones actually admit it...

>You think the FCC is going to come knocking on my door to
>pull my license?

Until recently you could commit mayhem by radio and the FCC wouldn't lift a finger. Now they're just after the jammers. You're still safe...

While you have a point, what I meant was that radios that can be tuned to frequencies different than those used for governmental propaganda broadcasts have been banned in the past in truly totalitarian systems (Third Reich...etc). Do you think that there are some special frequencies that hams in Cuba are compelled to use to facilitate easy monitoring by the government? Is there any evidence of this? Your information about the "canned" responses by the Cuban correspondents is somewhat disquieting though. I'm sure that this kind of thing is also used in any large organization that wants to keep a consistent public relations front though.

Have to admit you have an interesting point there.....which just goes
to prove even more that the Government doesn't know its butt from a
hole in the ground when it comes to what is best for my children.
However, if I abuse my children, they should be taken away, but not
because they want to endoctrinate them in the in liberal, conservative,
or any other kind of views like Cuba.

As crappy as Congress is getting, I would still rather live here.
Be nice if he and his son could live here in peace and freedom and
help us straighten out our government. I would welcome them to stay.
But, Castro has other ideas.

Why do you want to learn the stuff?
Few other hams have?

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)

This will come as a great surprise to Kenyon Ballew, shot and paralyzed
by the "jackbooted thugs" in 1971.

This will also come as a surprise to a few hundred folks who were
visited by the BATF during the 1970s, prompting hearings in the Senate
in 1982.

Well, gee, since the only Cubans I know fled to the US, then I guess all
I know is from those opposed to Castro.

What do you know about slavery in the US, that you didn't learn from
people opposed to it?

Too bad it's so biased against the ARRL with its false innuendos and
speculations. I would expect that a site proclaiming to be of a
historical nature would present facts in an unprejudiced manner.

2626. Alinco DJ-580 help needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-24 00:00:00 UTC
From: robert4@nojunk.flash.net
Message-ID: <MPG.136d7f8db5dd30ff98968f@news.flash.net>
Source record: 112748
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Last week I purchased this radio and was told that it worked great.
Oops. It doesn't. It barely transmits on 70 cm and I cannot get it to
receive on 70 cm at all. Repeaters that my Yeasu can hit with ease on
low power, the Alinco can barely hit on high and is full of static. Both
radios output 5 watts on high power.

Tone is off, squelch is set properly, offset is correct, but no dice.
The radio works fine on 2 m.

I read the manual a little more thoroughly and saw that if you connect a
mono mini-plug into the stereo output on top of the transceiver, that it
will short out the 440 band. Big warning on this in the manual. Well,
low and behold, he says he used it for packet. I figure he must have
mistakenly plugged his cable into the stereo one by mistake and shorted
out the 440 portion of the radio.

So it comes down to this...Have any of you done this to this radio and if
so, was it an expensive fix? I have never had to have a radio repaired
so I don't know approximate costs on something of this sort.

Any help would be greatly appreciated..

thanks
robert

to reply by e-mail, just remove the 'nojunk' stuff from the reply
address...

Still waiting for just which law Bash might have been
prosecuted under. At this point we have people saying
Bash (in there opinion) broke the law...BUT no one
can even identify an applicable law.

Cheers,

Glad you agree. That is exactly the point as to why
ham radio still attracts new comers...and will for a
long time. Why do some people hunt with a bow
and arrow instead of a rifle? Why do some of us
own and operate antique cars. MOST of ham radio's
attraction is recreational...and always has been.

The one area we can always help with is emergencies
of major scope. We then are there to assist...as has been
well reported for several hurricanes, floods, etc over
the last few years.

Cheers,
Bill K2UNK

Every year? In the last year I have spent no more
than $200 on ham radio. I have had my HF+6m
Kenwood rig for eight years. Paid $1500 new
for the rig. That is less than $200 a year over
the eight years. You can bet my phone bill
goes WAY over that on an annual basis.

>responding to your post.

Nothing I said made any claim that I talked worldwide
on 2m. Andy W certainly read my comments correctly.
BUT...just for the record, I know hams that HAVE
talked worldwide on 2m using satellite. AND they did

that with an HT in some cases.

>Ham radio has value as an electronics training medium, but it's true
>communications value is obsolete. We keep hearing about how the hams
>will save the day when all other communications are down. I work for
>one of the four largest telecomm companies in the US. Due to
>competition and deregulation, the current phone network is unbelievably
>redundant, the chance of a total failure is probably nil.

So tell us what happened when AT&T, Bell Atlantic, etc went
belly-up in servicing areas in norther NJ during hurrican
Floyd. I probably have just as much telco background as you
(worked for AT&T Long Lines, AT&T HQ, Bellcore, AT&T, etc.)
and there isn't a system around that can't go down when
an entire central office is under water.

>The weak
>spots in telecom are all exposed to weather, as in outside plant, and
>with current diverse routing, even they aren't that weak.

Routing traffic around a problem area doesn't provide
service to those served by the central office that is
under water.

>Once apon a
>time when there was ONE local phone company and ONE national connector,
>the chances of failure were much greater, and even then, it never really
>happened.

And today, the last mile to your home is STILL via that
same serving central office...regardless of who gives
you the dial-tone.

>I listen to plenty of traffic on 2m, 6m, 1.25m, and shortwave. How many
>times can you guys do radio checks? <G> Unforunately, most hams are
>NOT all that knowledgeable when it comes to electronics these days.
>They THINK they are <G>, but most of them are simply appliance operating

>installing a mobile appliance in a vehicle. The only people I often
>hear talking about anything other than the weather or the last micron
>they adjusted their antenna are the losers on 3950 on Saturday night.

In an emergency, give me one ham with a working "appliance"
mobile over an engineer with no equipment any day.

>Could you fix, or at least troubleshoot to a proprietary component, your
>own HT?

Probably...I did for years on the older component
level stuff. Today I can't be bothered because
the stuff is too small for me. Additionally, what difference
does it make. No one does field repairs on that
stuff anyway. Indeed, if you have the claimed experience with

large telcos, you know that they don't do component
level field repairs either...they just diagnosis to a bad
circuit pack and then ship it to a central depot
for repair.

Bottom line, what's your point?

>I'm not a ham operator. I've studied all the tests, and every year I
>purchase the ARRL Handbook, as I am an electronics experimenter and it's
>a terrific resource. One of these days when I can actually get to a
>session, I'm going to take the simple Tech test, or whatever the current
>version of that is. I can pass test after test of the theory tests
>provided on the online test sites, for all of the license classes. I
>have ZERO interest in learning Morse code, so I'll never progress beyond
>the Tech, except for the commercial licenses which don't require code.

And a number of commercial licenses aren't even around
anymore. The FCC dropped requirements for commercial
licenses to do repair on private radio equipment, etc.

I'm not sure just why you state what you do. Indeed, I
have been a vocal opponent of code testing for years,
but you can't even find the time to get the nocode
tech. Give us all a break. You are entitled to your
opinions, but maybe they'd be a tad bit more believeable
IF you got that nocode tech.

Seems someone of your
knowledge would take no more than 30 minutes
to fill out the paperwork and pass the test. Go to
ARRL.NET and you can find a place near you where
youcan take the test...probably several times amonth.

Cheers,
Bill K2UNK

Your theory about the stereo jack may be correct. However, first determine whether the antenna on the radio is a dual-band model. The previous owner may have swapped it for one with better performance on 2 meters.

Borrow a 2m/440 antenna from a friend, or hook up the radio to a dummy load and power meter. See what you get. You also can use a friend's mobile antenna for a test--provided of course that's it is a dual band unit.

73,
QRM

More bull. I have a cell phone in my car. If I use the autopatch
on a repeater to call my wife to say I am late, you are saying I
am breaking the law because I "could have" used the cell
phone but didn't.

Let's take it a step further, I and my spouse have ham licenses
so I can chat with her when I am running personal errands
on the weekend instead of calling her on the phone or
cellphone. You would say that is breaking the law according to
your comments above. I say that is just another purpose of
ham radio. Indeed, people passed 3rd party traffic for
years even though they could have made a phone call and/or
sent a telegram to accomplish the same thing.

Cheers,
Bill K2UNK

Big deal that he heard 5wpm in the extra part of the CW band. Is
there a 'speed limit' in that part of the band that says you 'must'
do over 40 in this area of the amateur bands. Tell him to get a
life and don't have a cow over it....take a chill pill and relax....

What the hell are government agents of the law suppose to wear-tuxedos? Were they expected to await formal invitations to visit the Gonzalez home? How long was Reno and Clinton supposed to have waited, forever? Are the laws of this land for CERTAIN people or for everyone? I've been an Elianer right from the beginning and now admit that the outlook seems rather bleak however there could be a plus side to this mess. The kid goes back to Cuba and starts spreading the news among his peers and pineapples that the U.S.A. is NO ogre as the Comandante would have them believe. The kid talks about freedom and its importance. Elian may become in good time a thorn in the side of Fidel providing of course the kid is not subjected to a crash course on why we're evil and falls for it. It seems that we Elianers will lose so get over it. We can still pray, can't we?

For me, that is not the point, it is rather the sad insecurities of human nature that require people to ignorantly copy behavior in order to be accepted. I hear PLENTY of people on 2 meters, even brand new hams use "we" because they heard it somewhere. I know we should all be accepting, but this is one of the peeves that I have trouble letting loose of. :)

I've seen them--and I've had students in my classes who had
participated in them.

You don't _need_ a warrant if you have "probable cause" to
believe a crime is being committed--and some jurisdictions are _very_
liberal about interpreting what constitutes "probable cause."

>And believe it or not in the PENAL CODE there are times
>that entry and arrest can be made without a warrant.

My point exactly.

Since you agree that a warrant is _not_ always required, why
question the raid that took Elian out of the hands of people who were
illegally preventing his return to his father? Or, for that matter,
why question whether my knowledge of warrantless drug raids is based
in personal knowledge or hearsay when you already know that they are
both legal and conducted?

Pray away! I intend to ignore the whole issue while getting my news fixes from the BBC, Radio Netherlands, the Economist, and the London Daily Telegraph, just as I did when Monica was in bloom. To use a Goldwynism with respect to Elian, "Include me out"

Dick

Donald Burkhart wrote "If I was the boys father I would celebrate his new found freedom in the U.S and let him remain there, any loving father would do this"

Freedom is a relative term, presumably Mr Burkhart automatically assumes that Elian Gonzales would automatically be happier in the U.S than if he lived in Cuba.

There are literally hundreds of Laws that impinge upon an individuals freedom that the U.S has that other Western democracies dont have, for example in England we dont have a law that enables police officers to seize cash on suspicion and require the suspect to prove he obtained the money legally, neither do we have a law that makes an individual guilty of an offense if he is aware of someone else committing an offense and fails to report it to the authorities.

To even up things a little most handguns in England cannot be legally held are, whereas I am assuming that most handguns in the U.S can be legally held.

Freedom is a relative matter and I would not assume that a citizen of one country is nessacarily happier or more free than another.

In so called "Free" countries most citizens are controlled by the need for money and to obtain it they work in jobs they hate or often at best just tolerate wheras a man of independent means has no such worries.

I could go on about how citizens of "Free" countries are controlled almost every minute of their lives by various matters and how a tiny percentage of the population have managed to cut almost all the control strings and are a million times more "Free" than your average Joe but I guess that the only people that would be interested would be those that managed to figure it all out for themselves a long time ago.

There is a certain narrow mindedness afoot which is not specific to any one country but is non the less truly frightening.

EGO MANIA WAS RIGHT !!
Oh yes Standards alright... COME ON NEAL ADMIT WHEN YOU'RE WRONG

You seem to have Standards and Double Standards mixed up.
You say on your own web page..." The basic tenet of my faith is "An it harm none, do as thou wilt""
But you harm away by slamming an innocent fun loving newcomer who was here to say Thanks.

Can't you just be noble...and admit a fault at least to yourself... and be nice.
Everyone makes mistakes, just allow yourself that and go forward in good faith.

Don't be so proud of your own ability to memorize give away test's and a few little beep's
that you become mean-spirited to the well intentioned. It doesn't seem to fit the nice profile
of a father and gentleman that you seem to be from your home page.

Amateur Ticket's have always been easy for those that apply themselves.
Why make a big deal out of the fact that you can do CW? Many can... I love it
I know the new changes will help the amateur radio hobby grow. It is up to us to work together.

I choose to be anonymous to emphasize the REQUEST to end this dribble and get it off of
our newsgroups.

2691. Bonfire of the Vanities: ARRL Server up in Smoke ?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-24 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8e2a1u$8hh$1@nnrp1.deja.com>
Source record: 112813

Not being people who jump to conclusions, and believing everything the ARRL tells us, we wouldn't speculate that the reason why the server is non grata at 4.03 EDT is because ARRL is facing some problems for their role in the April 15th giveaway.

One would be wise to consider the fact that the vain ARRL staff would never admit it, as we ham heretics would have a "field day" (pardon the pun).

[first enter Jon Bloom denying the validity of such speculation, then enter computer un-savvy hams who will read this and check 24 hours after it's posted, and declare "LOOKS FINE HERE YOU IDIOT"]

As you may know, there has been a message on there discussing a server outage from a few days ago. Of course, maybe they're upgrading. In that case, let's hope the server works harder than most new ARRL members and staffers did to get their licenses...

Doc, I think you recently posted a message that described your
conversation with one of these newly upgraded hams who didn't know what
"over" meant, as an example to refresh your memory.

I kid you not when I say I heard a gent on 2 who didn't know what kind
of antenna he was running... on an HT. Of course, he was codeless, but
spare us the agony if he gets near a code practice CD.

He'll ask if DX is slang for an alimony recipient.

Experienced heretics know it's slang for a guy who sends you a postcard
via the bureau 3 years after a contact in return for sending money
directly to his home.

A paradigm that needs to be straightened out for the newly upgraded amateurs emerges with the usage of these terms.

Via Buro: Indicates the amateur you are talking with is lazy (like you were when you waited for the bar to be lowered) and does not want to spell out words in proper English, or anything approximating the CW operator's conventions of using consonant letters only to abbreviate.

Via Burro: Indicates the (usually, but not always, Russian) amateur you are talking to wants your card. However, bailouts from the IMF, monetary blackmail on threat of nuclear assault declared by a drunken Boris Yeltsin, and black market sale of caviar have done nothing to alleviate this operator's cheap streak.

Ergo, the ham you are conversing with expects you to shell out 5 bucks to send him a card "por Avion" to confirm Middle County, Middle America, but will return the favor by sending his on a pack mule, typically on the Moscow- Libya-North Korea-Siberia-Whittier-Vancouver-Chicago-Miami-Havana- Washington route.

I'll admit that I don't bring up sensitive topics with DX contacts - I
don't think that is encouraged by the ARRL or the FCC either. Part of
the mandate of Ham Radio is to promote international good will, so
getting into heated political debates is probably not in line with that
policy. I would guess that in any truly totalitarian system, no
provately owned tunable radios (particularly transmitters) would be
tolerated, but that isn't the case here.

2695. Sobre libros por LRR del E.U.: Low Band DXing

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-24 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8e2div$c37$1@nnrp1.deja.com>
Source record: 112817
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

So here we are again, reviewing yet another fine ARRL publication. This time, it's Low Band DXing by John Devoldere, ON4UN.

A more knowledgable operator there never was. This man has constructed a tome worthy of its fee. Unfortunately, poor Mr. Devoldere was tricked by a crafty ARRL staff into thinking the US amateur actually give's a rat's ass about how signals are propagated or how antennas might be made more efficient. His success may not be that great with this edition.

Six hundred some-odd pages of charts, graphs and how-to's (hell, I'm not too proud to say I learned much) make this volume the book K1 Zooming Moron's piece of shrinked wrapped cotton candy (geared to the average idiot found in US ham radio these days) should have been.

Like I said in the previous review, never buy a book ARRL has seen fit to shrink wrap. It's a bright neon sign that says "you'll need more books than this one buddy, it doesn't stand on its own merits". Take "Tune in the World" or "Now You're Blathering", for example.

Granted, ON4UN's tome lacks the stunning recordings of dead and now-disinterested "retired" amateurs that K1 Zootsuited Mope's booklet contained, and doesn't have the thrilling monotone narration of K1ZM (I wonder if he used his contest keyer to piece the words together ?), but one can overlook ON4UN's glaring omission for it's value as an operating manual.

Not for the faint of heart, GED holders (without electronics experience) or those who memorized the answers and distractors (I apologize for losing over half of the new upgrades with the use of the latter word), ON4UN puts K1ZM's booklet to shame.

If W1BB was a lover of boring repetitive chronology, then he is smiling on K1ZM (not). If he was a man of knowledge and action (as he was) then he has his own copy of Low Band DXing.

I believe you will find that to be totally incorrect
based on the actual text from part 97 which makes
absolutely no prohibition to avoidance (regularly or
not) of telephone usage. 97.133(a)(5) in case
you missed it from his post.

All the news media took the _most_ inflammatory one. Here's
the series, and it shows that the gus was _not_ being pointed
at either Elian or Dalrymple, in fact much more obviously in
some of the less inflammatory shots. But the one with the kid's
mouth open is the photo that everyone has shown:

http://wire.ap.org/APpackages/sequence_pix/photoframes.html

The series also puts the lie to Marisleysis's little show'n'tell
trip showing the door being busted off its hinges (taken some
hours later):

http://cnn.com/2000/US/04/22/family.reax/

All pictures show te door intact. And Dalryumple's
tearful sub-story about having the agent rup Elian from his
arms isn't true either. See the above series.

> To defend these Reno Hitler-ites is inexcusable! What happened
> to the phrase: "Never forget?"

Ummm, I suspect the Miami Gonzalez clan and Dalrymple might
have a few things to teach Goebbels. . . . And then there's
that hypocritical nonsense about the pictures with the _father_
being fakes. *sheesh* But I'm surprised you _admire_ them.

Cheers,

Just as a thought, what proof do you have that A), the radios are
tuneable (I used to have a 6-channel, rockbound HF rig), or B), that the
people you were talking to weren't in the government? The fact is that
you DON'T know.

I'm not saying that this is the case, I just want to point out that we
don't really a know a lot, but we do know that life there isn't the same
as it is here.

If they require TV crews working away from home to learn canned
responses to questions about leaving Cuba, it's not far to go to expect
them to have a similar thing for hams.

Dayton Activities

Attending the 2000 Dayton Hamvention? Then don't miss out on
PACK*BASH!

What?
An event for the digitally-inclined ham, featuring:
* Buffet dinner
* Keynote Address: "Amateur Radio and Submarine NR-1"
by CDR Chas Richard, W4HFZ, USN

Commander Richard will give an overview and description of
Submarine NR-1, the U.S. Navy's only nuclear powered, deep
submergence submarine. He'll talk about highlights of some
recent missions, including the 1997 "Isis" operations in the
Mediterranean with Dr. Robert Ballard, with details of the
discovery of the oldest known shipwrecks in the deep ocean.
He'll also talk about Amateur Radio Operations on NR-1 and her

support ship Carolyn Chouest, and on Amateur Radio's impact
and benefits to both the ship and the crew.

* TAPR special interest group meetings
* "Birds of a Feather" gatherings

When?
Friday evening, May 19, 2000
Doors open at 7:00 pm; dinner served at 7:30 pm
Speaker and meetings after dinner

Where?
NCR "Sugarcamp" Conference Center, 101 W. Schantz Ave. --
South of downtown Dayton, just west of Main St. (Rt 48).
Maps available on the TAPR web site (www.tapr.org) or at the
TAPR booth.

How?
Dinner requires advance registration and payment through TAPR.
Tickets will be available at the TAPR booth on Friday, though
we strongly encourage registration <before> Hamvention.
The cost is $25.00 per person, tax and tip included.

All amateurs are welcome to attend, enjoy the speaker, and
particpate in the meetings, although only those purchasing
a dinner can eat.

To register, contact:
PACK*BASH
c/o TAPR
8987-309 E. Tanque Verde Road #337
Tucson, AZ 85749-9399

Phone: (940) 383-0000
Fax: (940) 566-2544
Internet: tapr@tapr.org

Visa/Mastercard Accepted

Who?
PACK*BASH is co-sponsored by TAPR -- Tucson Amateur Packet
Radio, the national leader in digital communication -- and the
Miami Valley FM Association, Dayton's packet radio club.

For more information (including maps), go to
http://www.tapr.org/tapr/html/dayton.html, or send email to
tapr@tapr.org.
You can request information via packet radio at
BASH@W8APR.#DAY.OH.USA.NOAM.

2710. Re: Réalisation W3DZZ ???

Source record: 112832

Patrice,
A W3DZZ is supposed to be a 5 band trap dipole for 10,15,20,40 & 80 meters that will be able to load up on all 5 without the use of a tuner while it utilizes just one pair of 40 meter traps placed approximately 31 feet from each side of the center insulator with about 19 feet pigtailed off each to provide 75 meter capabilities. I built one years ago and achieved much success on 40 and 75, a fair amount on 20 and awful results on 10 and 15. The pruning, in order to get acceptable SWRs on all the bands, can drive one to distraction and if you can't read English I wasted my and your time. Bon chance.

Actually, I dropped the compression ratio.. I got 10.25 forged flat-tops, they're about the max you can run on regular street gas(premuim).. When I really run, I get a couple of gallons of Cam-2 or VIP, and mix 50/50 with premium, and boy, does it like that.. <G> I also got 2 carbs for it, a 650 vacuum for the street, that gets about 10 mpg, and a 750 double pumper that gets about 4..

By fiddling with the cam timing, I bumped the compression up from ~135 to ~265 PSI. It hates to crank over, but when it fires, you know it.. <G>

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

Please Welcome:

Jose A. Vazquez/ N6VUY <bigace001@earthlink.net>
Ventura, CA

Trevor Browne <silverswine@aol.com>
Santa Rosa, CA

My name is Trevor Browne, I am curently 19 years old and a part of the Tiburon Police Department Explorer Unit. My rank is Sergeant. I have been with them 4 and one half years. I plan to go to the police academy and stay with law enforcment.

John Storm <rasputin@borg.com>
Utica NY

I am just a citizen who has a deep respect for all who are involved in emergency services. I like to keep my awareness high so as to help educate others as to the invaluable work you do.

.....

From the Mailbag:

Dave Larton,

Would it be possible to repost this message to our California Disaster Center message board? We would of course provide a link to http://acs.oes.ca.gov or to any other page you desired.

Christopher Effgen
The Disaster Center
www.disastercenter.com

(Thanks for the email, Christopher:

You are more than welcome to place our EMCOMM Bulletins and our weekly ACS Newsletters on your message board. The Bulletins and Newsletters are intended for the use of all emergency responders, not just ACS personnel. Thanks for the offer of the link! W e appreciate it!
--Dave Larton)

.....

What's New on the Net:

The SLOECC (San Luis Obispo County Emergency Communication Council) Newsletter Archive is now available on the Internet. Point your browser to: http://www.calpoly.edu/~kschremp/sloecc/index.html

.....

This week's EMCOMM Bulletin:

EMC234 Volunteer Awards For release 4/24/00

Good program directors have the DEDICATION to make certain that their volunteers get the recognition they deserve. The time, effort and money spent on such recognition ALWAYS returns many times over when done wisely and honestly.

One national program that has outstanding recognition of its volunteers is the American Red Cross. Just pick up any of their chapter papers. I recall my Mothers participation in the ARC in the Los Angeles/Culver City area. She coordinated the Blood Bank and received the Clara Barton Award as a result. It meant a lot to her, that award. She was in her late 80's when it was awarded in recognition of long years of service, dedication and hard work.

The same principal applies to any volunteer unit. One such unit is that of the Huntington Beach, CA. RACES. It's awards for l999 were reported in the CERT (Community Emergency Response Team) Newsletter for March 2000. Note the interesting categories:
Management Team Volunteer of the Year
City Volunteer of the Year
Outstanding Service Awards
-Most Inspirational
-Baker to Vegas (event)
-Digital Communication
-Repeater Trustee
RACES Outstanding Project of the Year

12 awards for Baker to Vegas (event)
Partners in Preparedness
Most Hours served (818)
Over 700 Hours (715)
Over 300 Hours (363
Over 200 Hours (7 pople)
Over 100 Hours (7 ohers)
Special Appreciaton to 6 participants
Good Samaritan to 5 participants

While these specific awards may not be usable in your EMCOMM
unit perhaps it will provide ideas and suggestions.

The Newsletter ALSO listed awards to CERT members (not RACES)
-Outstanding Service,
-Most valuable Person
-Most hours served (1106)
_Others with 805, 7 15, 624, over 400, 300, 200, 100 hours
-Exceptional person
-Founding member
-Above and Beyond
-Shake rattle and roll
-Up and coming
-Special Appreciation
_Instructor of the Year
-Team of the Year
-Youth volunteer of the year
-Youth volunteer "in training"
-Senior volunteer
-Special Training Awards
-"Friends of CERT"
Specialty Teams
-Communications Team
-First Aid Training Team
-Search & Rescue Training Team
-Shelter Team
-Senior Response Team
Special Recognition
-Movers & Shakers (15)
-Tremor (18)
-Emergency Services - Project of the Year (8)

It is also important to include in a units monthly newsletter
some notice of volunteer activity. The CERTS newsletter includes
an article on, and a photo of, the Volunteers of the Month. They
were selected by the CERT Management Team and the Emergency
Services Office. That is ACTIVE effective MANAGEMENT of the
VOLUNTEERS. by: Cary Mangum, State ACS Officer, W6WWW

To subscribe to bulletins, use the Subscription Services
web page at <http://acs.oes.ca.gov/subscribe.html>. If

you don't have web access, just send an e-mail message to
<mailto:emcomm-bulletin-sub@harthaven.com>.
- Submit suggestions, topics or comments on the bulletns to
cary.mangum@macnexus.org or cary_mangum@oes.ca.gov
Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a
Landline BBS: 916-262-0856 (graphical & standard interface)
EOM
.....

Please let others in the emergency services field know of the
newsletter, and encourage them to join... If you have opinions,
suggestions or written material that you'd like to share with the group,
let us know. We're always looking for new ideas and suggestions that
will benefit everyone.

See you next week!

I upgraded to General on Saturday the 15th as well. Hasn't shown up anywhere yet, and with the ARRL website down, I can't get any info. But the VE's have 10 days to submit, and then the VEC at ARRL have 10 days after that to submit, so I suspect that for many of us, it'll be a while longer.

When I upgraded on March 08 from Tech to Tech Plus, it took until March 31! Here's what happened: the FCC "upgraded" me on March 29 from a Tech to a Tech! I called ARRL and a VE told me that there were "hundreds of errors" for Techs upgrading to Tech Plus. An "internal correction" was applied on the 31st and I am finally listed correctly as Tech Plus!

2724. AF2Y:Elian revisited

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8e596r$ou7$1@slb3.atl.mindspring.net>
Source record: 112592

In the N.Y.metro area, aside from having annoying evangelisitc radio stations which beg more than pray, there are two excellent politically oriented stations namely WABC which is farther right than Genghis Khan and WEVD which is either centrist or slightly left of it. While doing my deskwork today, instead of listening to 14.313 which would have been worthless due to stupid content and lousy band conditions, I switched back and forth between the aforementioned AMers. Each was having a field day regarding the so-called "attack" on the Gonzalez home in Habanita Miami. I took stock of WABC callers who called Pres. Clinton a Nazi dictator while the Liberty Net brands him a communist. Then there were some who called Janet Reno an Eva Braun who wasn't exactly the worse looking Nazi broad to ever give Adolf the hots while others branded her Herman Munster. On the other hand, WEVD callers felt the government had no choice but to bust in unnanounced and implement what the court ruled despite the obstinacy of the surrogate family which felt they were above the same law to which the rest of the nation is subject. WABC callers called the INS agents, "gangsters and thugs" who scared the hell out of Elian by pointing a weapon in his face while WEVDers said that nothing was aimed at him while the kid thought it was all a big game and was laughing and giggling especially when the INS female agent started tickling him in the ribs as she guided him into the limo. WABCers said the photos of Elian and poppa were doctored to lend plausibility to Reno's argument while the WEVDers were convinced the kid was all too happy to be reunited with Juan. But if one tunes in 9.400, neither concept was right. According to those nuts the government was just rehearsing for the big attack on all of us to be herded into detention camps somewhere in the desert and be programmed to follow the New World Order, the nomenclature of which I still can't figure out. And all this over one six year old child! Can you imagine what would transpire here if a REAL crisis developed? Like for instance a kook who explodes Sarin gas in a major city subway station or a terrorist with a pocket nuclear weapon? Things have become so tense in the States, one must have a daily crisis to dwell on or invent. This country is not being taken over by globalists or leftists or rightists or any political entity whatsoever. NEUROTICS are doing it. People with runaway imaginations. By little foreign kids who can turn Washington inside out and backwards while people starve in the Appalachians. We have lost sight of the proper perspective and that is to keep things in it. This nation has become and is becoming even more a divided camp and who was it who said that a house divided against itself cannot stand? That was Lincoln in his debates with Stephen Douglas in the 1850s because then the schism was between the Free and Slave States. Now the schism still exists but in an entirely different vain. To sum up, although I voted for Clinton twice and despite the awesome economy I can safely say that no President has ever either intentionally or unintentionally done more to put us at each others' throats than that man. Let's hope it ends come 1/20/01 when either

Gore or Bush are sworn in!
Doc.AF2Y

2725. Icom T7H Mod?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC

2727. Re: Is Ham Radio finished?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: W5LZ <w5lz@oio.net>
Message-ID: <390654DF.F615DF53@oio.net>
Source record: 112595

RadioFreeSannibel,
"Dwindling number of hams"? Your kidding, right?
600K(+) hams is dwindling? Don't think so. "Lack of
new licensees"? I'll bet you haven't been to a test
session lately (even before the drop in code speed). As
for using 'QST' for anything other than the ads about new
equipment, a ~few~ good articles, and to see what the 180*
out of phase ARRL opinions are, it makes a good 'shim' to
level the corners of 'wabbly' tables.
Too bad you didn't stay in the hobby, you might have
made some slight difference in how 'terrible' it turned out.
'Doc

2728. How many novices (etc) are out there?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: Rob <lilindn@prodigy.net>
Message-ID: <8e5m5k$mp8$1@newssvr04-int.news.prodigy.com>
Source record: 112596

Does anyone out there have a list of how many hams there are (in USA) of each license class? I'm wondering in particular just how many novices there are nowadays. I wonder if anyone tried to get in under the wire to get their novice before it became unavailable, and just who is the -last novice-?
It would be a good thing to know, vis-a-vis possible band enhancements. For example, if the novice 40 segment were to be moved from 7100-7150 to 7030-7055, woujld it cause a crowding problem, or would there be too few novices to make a difference. I'm tempted to think that most novices that actually got on the air with CW have upgraded to general or above, anyway.
Rob

2729. Should I avoid a "too vanity" callsign?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: Rob <lilindn@prodigy.net>
Message-ID: <8e5mt3$1jt6$1@newssvr04-int.news.prodigy.com>
Source record: 112597

Hello,
I have recently been thinking about losing my old callsign to get a new one through the vanity callsign system.
My original motivation was that my existing call is difficult for other operators to remember, and causes confusion on the air.
Currently, I have a 2x2 callsign KD8%%. On CW, many operators are not use to hearing a 2x2 (since CW ops never had any incentive to upgrade from general to advanced, 2x2s are rare on CW), so ops keep asking me for the third letter of my suffix. On phone, the letters of my call all sound similar to other letters of the alphabet, so other ops are always miscopying my call.
My original plan was to get a 1x3 K8%%% call without any letters "b", "c", "d", "e", "m", "n", "p", "t" or "z" in the suffix.
While my wife (not a ham) and I were throwing call sign ideas around, we both came about the same call that sounded really cool, and Vickie has almost begged me to apply for it (it IS available).
Problem is, it would be a very obvious vanity call. It is a 2x3, out-of-district, which would not be assigned sequentially for about a century. It has an obvious slang meaning (though not at all objectionable).
Lately, I've been thinking it would be a great call for Field Day, but maybe not for day-to-day use. I've told Vickie she ought to get her tech-lite so that she can apply for it herself.
Does anyone else have personal experience, good or bad, about using a "too vanity" call?

Rob

carkenord@juno.com wrote in message <8dvtdm$o04$1@nnrp1.deja.com>...
>Please.......
>
>For an "Advanced" class license holder, what part of the 15 meter band
>is allocated to SSB operation??

I can't believe how many people replied to this with their own opinions,
yet not one actually answered his question!

It's 21.225 to 21.450 MHz. It's not actually allocated to SSB per se,
but to "CW, Phone and Image". This includes SSB as we know it (single
sideband with suppressed carrier), but also includes other phone modes, such
as AM (double sideband, full carrier), variations of those (controlled
carrier, reduced carrier, double or single sideband), FM (but only very
narrow band FM, not usually used), as well as slow-scan (still picture) TV
images.

A fair criticism of KA0PFJ's post would be that (s)he should really
have a copy of 47CFR part 97 at his (her) station, it is downloadable from
the FCC website.

2731. Phone Patching is Strictly Legal

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <5504-390663BB-109@storefull-241.iap.bryant.webtv.net>
Source record: 112599

Aaron Jones,

Sure a case can be made against hams evading telephone toll charges.

HoweverAnother case can be made to the contrary: For phone patching.
Since it has been tolerated for the past 50 years of my licensure, one
could say it is de facto legal.

These days, I am unaware that it is considered any different. If the
aggrieved parties, the telephone toll companies, aren't complaining,
then it is fairly well settled as legal.

Barry,
Just thought I'd let you know that we lost both cell and land phone capability here in Western South Dakota last summer and ham radio, particularly packet radio, was instrumental in keeping emergency communications going until the service was restored.

My analogy is more along the lines of a corporation telling its
employees to refer questions about corporate activities to the
"official" PR department. Don't get me wrong - I do not in any way
support the Communist/Totalitarian system of government or the Casto
Regime. I'm just saying that politics and emotional overreaction by
expatriates has colorized this whole child custody affair and blown it
way out of proportion. It's my belief that the best way to fight
communism is to expose their adherents to lots of Western influences.
People can see and judge for themselves if given the opportunity. This
is what would happen if relations were normalized with Cuba and US
tourism and business interests were redeveloped on the island. The only
thing preventing this is a bitter and punitive attitude held by those
"expats" who experienced mistreatment by the current regime.

We are building very small, simple satellites and need some tiny transmitters and (separate for control) receivers that are preferably crystal controlled to simplifiy initialization and increase reliability. We have used the little Alinco credit card transceivers for prototyping and they are fine, but we have had a jump in the schedule that launches us earlier than we anticipated, so we would like to simplify (till our next mission.)

Any suggestions? We would want to transmit a half watt or so out and the receiver need not be too sensitive. Probably one on 2 meters and one on 440, though I suspect it might be better to go to 1.2 Ghz for the control link.

Any pointers at all much appreciated.

I'm not entirely sure of that, at least as far as the ARRL is concerned. The plug appears to have been pulled on the real ARRL web server, and the SMTP servers for both the .net and the real .org domains appear to be disabled. Some have speculated that this is a DOS attack, but it's also consistent with an admin responding to reports that his server's been hacked. Also note that while the domain hijacking (which is likely to go unnoticed from behind the ARRL firewall) appears to have kicked in late Saturday or Sunday (depending on how long it took to propagate), the faux web site didn't go up until yesterday evening, likely *after* most ARRL people had left for the day. Timing makes it look like some ARRL admin may have gotten called in early this morning once news of the faux web site got around.

Netfirms, I'll agree, so far appears to be clueless. Their DNS and web servers, at least, appear to be quite "0wn3d" by whoever did the hijacking. ARRL merely needs to get their domain back. Netfirms is likely facing having to wipe and rebuild their servers.

The problem was detected early Monday morning, a few hours after the
bogus change began to take effect. The registrar was notified
immediately, but as Ben says, it takes time for DNS changes to
propagate.

The Web server did go down last night. While the timing is suspicious,
I'm not sure but what it was a "normal" failure. (Needless to say, we'll
be keeing a close eye on it.) I don't believe any servers were pulled
off-line (why would they be?) Certainly the Web server, for which I'm
responsible, was not.

Presumably the IS folks here at ARRL will be tightening up the security
on the domain name registration!

It may have been. There's alot of hacking type
software out there, even some webpages dedicated
to providing such as www.hackology.com for example.
Best thing to do is put a password protected
firewall that *also* reads the unique serial number
of the Pentium II or III Processor installed within the
computer that is accessing the page to edit.
In this way ONLY the authorized computer can gain
access to the HTTP coding. Just a thought.

> Americans---don't believe me, check with Australian immigrations!!! So,
> why are we suckers for the rest of the world!!!

Actually, more than a few countries have similar immigration laws.
Most require that you either (1) have a large some of money to support
yourself without work, (2) have a skill in an area where there is a
shortage in that country, and (3) have an employer in that country that
is willing to sponsor you.

For many people, the last option sounds the best (an employer), but
there are usually a few restrictions involved. The main one is that,
once you have an employer willing to offer a job, you have to wait
outside the country until all processing is done. Since this can take
an unknown number of months, very few employers are willing to wait that
long to have a new employee start.

In addition, many countries are now lumping requirements number two
and three together. You have to have an employer who is willing to
sponsor you for a job where there is a shortage of local workers. And
since there is seldom a shortage of local workers, unless you have one
really specialized specialized skill, this effectively eliminates any
chance for immigration.

Of course, there are always exceptions to these rules. For example,
blacks are welcome in the US, the UK, Aust, New Zealand, and most other
English speaking countries, without any of the money/employment
restrictions that whites face. So, for a black, all that really matters
is that you're not a serious criminal (minor criminals are okay).

Who knows why all of these countries would adopt special rules for
blacks (and other minorities in those countries). Perhaps it is as some
have said - it is an attempt to weaken the power that whites have in
those countries (I guess someone else wants control).

You're right. The father may be planning to "escape" soon. So I guess there is no real reason to keep Elian here, since he's going to eventually make it back here anyway (so much for all the worry about his future that some have expressed).

Man, if Avera is going to boot everyone who does not like Clinton off
MCI Telecommunications, they are going to have very few members left.

Where is there a double standard in my position?

> You say on your own web page..." The basic tenet of my faith is "An it harm
> none, do as thou wilt""
> But you harm away by slamming an innocent fun loving newcomer who was here
> to say Thanks.

I do not harm him by speaking the truth, and if he is harmed by my speaking the truth that is his problem, not mine.

> Can't you just be noble...and admit a fault at least to yourself... and be
> nice.

I am perfectly nice to those deserving of it. I admit fault in myself when such fault is clearly shown. You have yet to do so. No one has yet to show where my position in this is wrong, and IN FACT my abilities to predict what will occur has been shown to be UNERRING in this context. I knew the anti-coders would not stop at the no-code tech... I knew the 'disability waiver' (Bush's catering to lazy whiners) would be a source of massive abuse. I said so immediately at the time, and have been proven 100% correct and accurate to date in this.

And way back in the 70's I saw the writing on the wall regarding CB and was again proven 100% correct and accurate.

So, please explain to me why I would or should find error in me, when history shows that in this context, none exists?

> Don't be so proud of your own ability to memorize give away test's and a few
> little beep's that you become mean-spirited to the well intentioned.

If they are so 'well intentioned' they can EARN their additional privs just as I and millions of others have.

I see no virtue in the lowering of standards, especially when done just to cater to selfserving and lazy whiners.

> It doesn't seem to fit the nice profile
> of a father and gentleman that you seem to be from your home page.

Sorry you feel that way. But I also raise my family to believe in high standards and to work for such. I do not tolerate slackers, whiners and those who play The Blame Game (tm) to desperately try and excuse their own personal failures. There is no dishonor in failure if you give your best. There is dishonor in whining about it and expecting a handout.

> Amateur Ticket's have always been easy for those that apply themselves.
> Why make a big deal out of the fact that you can do CW?

Because that is the standard, whether officially ignored for political expediency or to pay back political favors or not.

> Many can... I love it
> I know the new changes will help the amateur radio hobby grow. It is up to

Hello, Will.

I just found it today (Tues. morning) and it's the same message. It's hard to believe it's still up there, but I think people were out for the Easter Holiday. Looks like maybe some kids got bored during Easter break.

I tried to reach the ARRL too. I looked on the Network Solutions WHOIS server for web contacts, and got my messages bounced back too. The one hotmail contact seemed to go through. I'm also trying to reach someone in local ARRL group that might have contact info.

Were you able to reach anyone?

The Network Solutions page looks like it was changed on April 22 and the database updated April 23.

http://www.networksolutions.com/cgi-bin/whois/whois?STRING=www.arrl.org

Also looks like from the web page info for the one that's up now was created on April 22 too. The local time was listed as 3:01 PM Local Time, with a GMT of 7:01. So it sounds like the hacker(s) were from the East Coast. I wonder if someone with password info on the ARRL staff might have kids who like computers and snoop???

73,

Mike KF4UVO

Hams have broken little rules for years. Years back when long distance rates were very expensive, hams beat Ma Bell out of thousands of dollars by phone patching for themselves and their neighbors. The West Coast Amateur Radio Service held a daily (all day long) net for years on 40 meters and it's main use was to facilitate those hams trying to save a long distance buck. Then autopatches came in and hams discovered that they could have free cell phone service too. Hams then beat the cell phone companies out of thousands of dollars in revenue.

CONGRADULATIONS Kluge! You have said the
secret word and have won a free trip to
the Dayton Hamvention for you and 2 of your
frinds! Also included is a Saturday evening
guest pass to "Lonny's House of Legs" on
1632 Westbrook Road, where you an
your guests can enjoy an enjoyable evening of
libation, cigars and lively ladies (topless
of course...) Courtecy of Yaesu and Intel
batteries extra...

Congratulations!

Ah. The Cubans instead rely on jamming US broadcast signals, as did the
Soviets (remember RFE?).

> Do you think that there are some special
> frequencies that hams in Cuba are compelled to use to facilitate easy
> monitoring by the government?

It's not beyond belief, but I don't think so. Your asking the question
proves that we just don't know. It's more likely that Fidel's goblins
only issue licenses to the "trusted" and then monitor them randomly.

> Is there any evidence of this? Your
> information about the "canned" responses by the Cuban correspondents is

Well, neither ABC, Fox nor CBS ever issued me a response card for anything. The FCC never required me to memorize political statements prior to being permitted to go into the field for ENG, nor did they ever send shills out to see if I would parrot those phrases when those issues were brought up.

Especially since the hijackers put a one day TTL on their fake arrl.org
DNS records.

>I don't believe any servers were pulled off-line (why would they be?)

My error. For some reason, the ARRL mail servers appear to be
unreachable from the free shell site I use.

>Presumably the IS folks here at ARRL will be tightening up the security
>on the domain name registration!

Tighten up the DNS servers, too. Zone transfers appear to be
completely open.

Unfortunately, that probably belongs(or belonged - they probably
ignored it once the domain got hijacked) to the hijackers.

I feel so violated. May QST had a lovely editorial on the merits (none) of giving the FCC your SSN to renew your license, so that they might check for student loan defaults and tax cheats. I think I was plagiarized.

Anyway, sorry, Checkpoint Charlie guardians. I didn't need your egalitarian handouts for my education and I pay my taxes as needed.

ARRL's apparent misfortune on the web serves to show us all what I said, along with others, many months ago, about the ULS. How would you have liked the server violation to have occurred on the FCC site ? Would not the people who hacked the ARRL with their pirate radio message like to gain access to that info on regulation-abiding amateurs and create a scene ?

I know I would love my SSN sitting on an FCC server 24 hours a day. FCC claims that the number is not sitting there once you are assigned an access number are BOGUS. You saw it come up every time you access an account (at least a few months ago), as a friend demonstrated on his. How can FCC sit there, lie and say the number doesn't go out over the internet other than the first time you send it ? Anyway, recall that ONCE is enough on-line. And if you think with the Genuine Swiss Cheese security the FCC and other government agencies use on their servers my amateur friends gave their real numbers, you have another thing coming. I haven't upgraded or needed to renew my license yet, so I am not at the crossroads of a decision, unlike those engaging in C.D.

But just think, today ARRL, tomorrow FCC. Then they can open charge accounts and internet accounts, like some shit kicker did to me last year... but lived to regret.

Needlesss to say, my days of "E-Commerce" died a quick death.

So, you naysayers go ahead and eat your genetically engineered potato/ french fries (did you see CNN's article on delivering vaccinations through this sort of crap "food" ?) and give out your SSN to agencies other than SSA. Take some medicines approved on the FDA's "Fast Track". Or you can refuse and demand the government go back to the way it was in 1941, at minimum. Before it looked at Germany and decided the Nazis weren't that bad a bunch of guys to emulate...

Good golly. I thought I already read the April issue and previous ones before. Then I read the May issue.

Here's what I found: ANOTHER article on Dayton (last month had one); ANOTHER 2/440 radio reviewed (almost every month has one); ANOTHER rehash of PSK31 (several times in the past year); ANOTHER how to do your own DX pedition article (several times, most notably on Bosnia). ANOTHER ARRL remote controlled amateur drone on "smile therapy", lambasting some guy who dared to express his (independent) thought that he won't be talking to any new Extras.

The broad themes are changing but not the content. For example, they've rehashed PSK31 in basic form, mobile form and now basic form again, within a year.

We pay 34 dollars for this sort of mindless repetition ? I sure didn't pay 34 dollars for what they did for my interests in Pennsylvania in December.

When somebody asked Jon Bloom if they even knew the server we're paying 34 dollars a year each to use was down, the person should have asked whether their editors know what the hell was in QST this month...

2784. What's the best amplified antenna for scanner/SWL ?

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-25 00:00:00 UTC
From: "Pez D. Spencer" <pez@kandy.com>
Message-ID: <39060AED.99103102@kandy.com>
Source record: 112682

What's the best amplified antenna for scanner/SWL ?

I'm looking for small size, to install in a brief case for travel. Some that exist are the Sony, MFJ, and TinyTenna.

Which will perform the best in both SWL and scanner use?

Thanks for answering here.

Pez.

Well, Mark, you just showed us all that you're more concerned with knee-
jerk attacks and the defense of ham radio than thinking about what
you've written before posting it.

You just implied that any ham is lacking knowledge by demonstrating the
case of the Extra. Yet then, in typical "waaah, why are you hurting ham
radio" fashion, you said they're not all dysfucntional as hams. How can
you try to deflate my statement by saying Extras are dysfunctional, but
then say not everyone is ?

Here is the truth. I never said all hams are dysfunctional. I only said
that the guy who didn't know he was on a vertical antenna- different
than a piece of number 28 wire (HE MIGHT NOT HAVE BEEN ABLE TO SEE WELL
?)- was a codeless tech.

The "of course" was intended to indicate that each class of licensees
has its idiots, with their respective problems. I have said repeatedly
over several years that most, but not all, hams are brain-dead.
On HF, some General doesn't know what "over" means (talk about being a
cave dweller). On 2 meters, some tech doesn't know that any HT out of
the box has a vertical.

>themselves) to house it all in, installing new equipment, spending
>hours configuring software, pulling hardline up the tower, etc.

Who do you think brought them the invention of the repeater? Who
explored VHF when it was still considered the ultra highs? Believe
it or not, electronics existed prior to the creation of the no-code
tech license.

>They
>are always to be ridiculed on HF and amateur newsgroups and webpages
>by those not so gifted,

They were ridiculed for their whining. Who do you think began the
debate in the first place?

>whos only claim to fame and control in their
>lives is that they can copy 20wpm Morse, but haven't a clue when it
>comes to paging terminals, receiver voters, UHF remote base links,
>topo coverage mapping, TNCs on digital modes, FM transmitters,
>duplexers, diplexers, magic rings and remote recievers so the HT in
>WalMart can call home on the autopatch running only 100mw. No, they
>can copy CW....just like the guys on spark!

That's a pretty broad brush you paint with, Larry. I think you're
really going out on a limb saying no Extras have any idea of the
items you mention.

> How sad......

Sad indeed that you would believe such things.

Attennnnntionnnnn Radiosigs.

Congratulations. Your "Elian Was Snatched" post has generated 127 replies in under 72 hours. Now I can't say this is Pulitzer territory, nor can I say it's even into Guiness Book territory .. but I can say it's one fine effort. Triple digit threads are few and far between. Now, you've generated that in 2 and a half days or so. My hat is off to you, sir.

But, alas, the topic is spinning down. Granted, it will be a hard act to follow. Such volatile topics are rare these days. But, would you mind giving it a try? Maybe some insight on the KC1ZQ / KC3AU dialog / debate could spin things up a bit on here. Or a topic of your choice. But, please .. no re-posts of David J. Smith or "Prophet" Stair.

The so called WELFARE licenses may be the last hope that ham radio has. We may actually find out that it is not necessary to be able to copy 13 wpm code to be a good HF operator. For those that want to QSO via CW then let them become experts in that field. For those that want to do Moonbounce or APRS or Packet let them become experts in that area. Don't let the 13 wpm code be a deadend to someone that may have a great contribution to be made in those speciality areas. There is plenty of amateur spectrum out there and we as hams need to protect it by every wavelength we can and to use as many modes as possible.

My 2cents worth,

Where did this loud old boor come from, anyway? I never heard Seymour on 313
a year ago.
Out of nowhere pops this blowhard. I didn't even think Seymour was a real
name until now.
I do recall an old joke some years past about a Seymour Butts who lived
under the boardwalk in
Atlantic City but that's about it. We shouldn't be so tough on the guy,
though. According to one
of his extended monologues, he had an operation where doctors removed two
spots of cancer from
his lungs (everyone who smokes eventually gets lung cancer if they don't die
from something
else first). Seymour believes they got it all because the spots were small,
etc.. He is a true optimist
and thinks he beat the rap. I hope he did but I've never known anyone who
actually did with lung
cancer. In this respect I can understand why Seymour might have chosen ham
radio as an outlet
but one thing we can be sure of is that Seymour will not be SEEing anymore
BUTTS.

I have been trying to access http://www.arrl.org since 1700Z on Monday. I get a DNS/No entry error back. Also tried http://www.arrl.net, with the same result. This evening, I tried http://www.arrl.com and got this nasty message: "THE SYSTEM IS F**KED Pirate radio 4 life baybee@#^#@ brought to you by the Coffe Mother F**kers, werd up." Then I tried arrl.net and .org again and got the same thing. It looks like the ARRL has been hacked by broadcast pirates, alas. Some of the messages I have in to what were previously known good email addresses at ARRL have bounced back to me, so I cant check it out with them. I will probably try calling them on the phone tomorrow, though this evening I heard nothing on the voice bulletin out of W1AW. Is it possible this could be going on and they not know about it? Does anyone have any idea what is actually going on?

I was at a local radio club and I fixed a radio for a guy whose battery wire had come off (and he couldn't figure out what was wrong). "Of course, he WASN'T codeless". In fact he had passed the highest code and theory exams in the "golden days of Amateur Radio".

Using the "mf_luder" logic, all such Amateurs are, by association, totally incompetent. Fortunately, I don't think most Amateurs are so prejudiced and intolerant to think this way.

Mark.

Scott,

I am not trying to be contrary, but honestly am curious to know how you can be sure that you are working someone via long-path from your car, since your mobile antenna is almost certainly omni-directional? Is there a way to do this using a step-attenuator, or something like that?

The ARRL has been a kind of hard luck organization when it comes to computers. Yes, they have definitely been hacked- little doubt of that. I'm sorry it had to happen to them. No doubt they will start putting a lot more effort into security after they get the mess straightened out. I just hope to God that the hackers didn't trash important records, but those guys can be pretty malicious if they put their minds to it. I sure hope they did not wipe out any DXCC computer records. That's one that happens to matter to me. I hope that ARRL did frequent and thorough backups! Siiiiighhh! 73, K3KY

I know a lot of oldtimers will disagree, but just when did the state-or-the-art, or obsolescence become the only marker of the value of ham radio? Sure, we have always been supposed to be pushing the envelope, experimenting, and such, and maybe ham experimentation is mostly now covering ground that is well-entrecnhced in the text-books, but I will gaurantee that the typical HF-ham, and many VHF-hams as well, know more about the technology they are using, and how it works, and are learning more all the time, than most of the people that *build, program, and maintain* computer networks, not to speak of the rest of the world that just uses them. Electrons are still electrons, the laws of physics have not changed, and in fact, as modern communciations comes more and more to rely on "wireless," that is to say: radio, it is more important than ever that more people understand basics about antennas, propagation, tuned circuits, et al.

I hear this over and over, and I still have no idea what is meant by it. I suspect that most people uttering it don't, either. What do you mean when you say a valve circuit is 'inefficient'? If you mean that it consumes more power for the same work than a solid-state circuit, so what? As far as most hobbyists are concerned, an all firebottle shack *night* add 2 bucks a month to the electric bill, *if* you are running a gallon amp. If you don't want to muck around inside your rigs, that's fine. If you don't enjoy the glow, the smell, and the audio output from a good tube receiver, fine. But I guarantee that the *only* difference you can hear with your ear, between my Collins S-line, or

Drake C-line, compared to the high-end of current transcievers will be the better transmitted audio from the former. Been there, done that, over and over, comparing everything from an FT-840 to an IC-775 to a JRC-245. Sure, the latter are a bit more stable, but hardly enough to even matter in the most finicky digital mode, and harder still to tell the difference without the use of lab-grade counters and other gear. New gear is great, and I own a shelf full, most recently a Ten-Tec Omni-VI+. Mostly, I find the new gear just automates things and adds loads of convenience. It is a contesters drem. I honestly don't know how people did contest's before memories, voice keyers, and all that stuff. The old stuff is still fun, and puts a lot less between me and the ether. I understand it, I can fix anything that breaks myself, and by operating and maintaining it I continue to learn a great deal about mixers, oscillators, filters, amplifiers, transformers, and about components and their performance, or lack thereof. If you can troubleshoot a SMD board, and have the money for the test and rework gear you need to do so, I am glad. I don't, no will soon on a teacher's salary.

I don't understand the poeple who come on these groups, and stay, who say nothing but ill of amateur radio. Why bother? As for radio in general being obsolete, that would be news to Wall Street, NASDAQ in particular. Everything is becoming wireless, and as you know, that means radio. Not HF, to be sure, but radio signals, transmitters, receivers, and antennas. The trend is towards vastly more signals in the air, not less.

All ARRL pages have been wiped off of the DNS servers of the two major ISPs I use (the other is a major reseach university). This evening, this changed and now I get a hacked page loaded with profanity and nasty messages about ham radio. They have been hacked. Their email is bouncing, also.

I haven't been able to get to any ARRL web pages since Sunday last using the text URLs, and have been trying all evening to reach them using the numeric IP addresses. All attempts have met with "busy" messages. So in addition to the hijjacking of the ARRL domains, the phoney vulgar pages that have been coming up, someone (the same someone[s]?) has no apparently launched a denial-of-service attack on both the .org and .net domains. Email to adminstrative .org and .net addresses is also bouncing. . .

Sometimes instant potatoes aren't so bad, and if I could have learned 5wpm code in an "intensive" weekend, then I would have done it. After these new hams have 40 years of experience, they'll know just as much as or more than the old hams with 40 years of experience.

Sorry to follow up on my own post, but I just realized what should have been obvious: The hotmail address in the whois record more than likely belongs to the person who changed the DNS address records in the first place. It appears that email will not work, and that a land line or a direct radio contact will have to be used to reach the ARRL instead.

>the same result

Yes, the arrl.org domain was hijacked this weekend and both
www.arrl.net and www.arrl.com are CNAMEd to www.arrl.org.

>This evening, I tried http://www.arrl.com and got this
>nasty message: "THE SYSTEM IS F**KED Pirate radio 4 life baybee@#^#@
>brought to you by the Coffe Mother F**kers, werd up." Then I tried
>arrl.net and .org again and got the same thing. It looks like the ARRL
>has been hacked by broadcast pirates, alas.

To be precise, the ARRL machines themselves don't appear to have been
penetrated. The arrl.org domain was hijacked (pointed to different DNS
servers at netfirms.com), and the hijackers pointed the hijacked
www.arrl.org to a different server (also at netfirms.com). Once the
arrl.org DNS registration is corrected, things should be back to
normal. If anyone's been 'hacked', it would appear to be netfirms.com,
a Canadian web hosting company.

>Some of the messages I have
>in to what were previously known good email addresses at ARRL have
>bounced back to me, so I cant check it out with them.

That's probably from before the faked arrl.org DNS records were put on
netfirm.com's DNS servers. At this point, www, ftp, and mail services
for arrl.org have been diverted to one of netfirm.com's machines.

>Is it possible this could be going on and they not know about it?

It's possible that none of this is going to show from within the ARRL
local net, depending on how they have their local DNS servers set up.

I had no problem hitting the web site earlier using the ip address.
Note that it's also possible that ARRL pulled the plug on their web
server without realizing their machine hadn't actually been penetrated.

>So in
>addition to the hijjacking of the ARRL domains, the phoney vulgar pages

It may not be as bad as it looks. The arrl.org domain appears to be
used as the 'main' domain. I suspect you'll find that administrative
arrl.net email addresses are aliased or forwarded to arrl.org
addresses, and since the arrl.org domain has been hijacked, those end
up bouncing when they hit the mail server the hijackers have MXed for
arrl.org. Check the 'Received' lines on those bounces, not to mention
what machine is actually doing the bouncing.

I'm debating as to whether or not I should call them. Most likely
their tech people are already on top of this, and I'd just be getting
in their way.

The current site is netfirms's second DNS machine. The address does
show up in an Exodus netblock(NETBLK-ECI-7). If anyone wants to point
a rwhois client(I don't have one set up here) at Exodus's server, I'm
fairly sure you'll find it's in a sub-block owned by Netfirms.

Will's right. Just got the same garbage upon going to www.arrl.org/ I've
been online for 13 months and it's the first time I've personally witnessed
hacking at work and now I see what it's all about. Somebody's mad at the
League and I can't understand why, ho..ho..ho. Might be rebellion against
the stance taken on the welfare hams issue? It's however no way to show
possible discontent and whomever is responsible should be kicked offline,
thrown out of the League, banned from ham radio and exiled to Devil's Island
as was Papillon.

The sad thing is that neither the ARRL or netfirms has noticed yet,
after 12 hours. That doesn't speak well of the system administration team.

Thank you for the kudos but to be honest, who expected anything close to 127 replies? I always write from the heart and if I can get the guys to think and write, that's what it's all about. I never expect to top the "Elian" post since it's sort of like writing a big hit song, something like the magnificent "My Heart Will Go On" from one of the incredible of all movies, "Titanic." By the way, I miss Celine Dion. Good God almighty, WHAT A VOICE and what a beautiful soul she has. Gave up show biz in favor of taking care of her elderly ill husband while also trying to get pregnant from him which simply ain't gonna work. Yet, trying to impregnate her may make the gent forget about ever being ill? Sorry but I haven't been keeping up to .313 affairs therefore am ill equipped to write about any KC3AU versus ex-KC1ZQ "romance." From what I culled from the PAST is that John is a decent chap who's a dogmatic evangelist while David is just a mangy dog, incapable of being saved by Jesus or anyone else and someone who lives to denegrate persons based mostly on sexual preference which doesn't phase me in the least. In the meantime I'll try to think up something controversial but understand that "My Heart Will Go On" on rec.radio was my crowning achievement, even better than the tender mournful ballad "Oh Herbie" composed by KC3AU.

If you watch a lot of C-band, you see this happen all the time. When I
was a CBS photojournalist, this was almost standard when doing a
"walking tour" interview. So what's your point?

I dunno, guy, the AP newswire isn't generally considered an "extreme
right wing group."

Except, of course, when it reports on something that the Clintoons don't
want reported.

2825. The Privileged Few

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-26 00:00:00 UTC

I am so tired of reading the word "privileges" that has entered the ham lexicon since the current group of ARRL sad-sacks took over the organization. I never used to read the word "privileges" in the 80's.

Does AAA go around referring to your driving "privileges" ? How about NRA ? No. Yet they can be taken away just as "easily" for purported misuses. So why does the ARRL have to go around like a bunch of self-loathing sad sacks and chant things like "trying out their new privileges" ?

Is it because in the ARRL mentality, everyone is guilty until proven innocent ? So given that logic, you can be booted out any time they whisper in the FCC's ear that you're causing "ter-rub-ul" ? I think KV4FZ, et al. have proved it's about as "easy" as losing your driver's license and takes as long.

Maybe it's because the ARRL walks a tight rope. If they don't continuously pound the paranoia of band theft into your head, they think it might happen and then they'd be out of work. Or, if they don't, they would find themselves no longer needed to "guard" the bands and then be out of work. And let's face it. Who is going to hire a former ARRL employee ? Any at Microsoft or Morgan Stanley ?

But in the final analysis, we know why. It's another attempt by the ARRL to keep ham radio as undynamic and boring as possible. This is accomplished by attempting to instill in potentially "controversial", free-thinking operators the notion they can lose their license at the drop of a hat for doing things like using bad words such as "damn", "jackass" and "shit" on the air (oh my !).

Just another example of ARRL trying to control the means of "production" in an environment where they've convinced themselves most hams can't think for themselves.

Funny thing is, only a quarter of US amateurs continue to receive the propaganda literature that contains such terms as "privileges" and "Gentleman's agreements". Guess the other 500,000 see it for what it is. More likely they are paper amateur radio operators, just like most of the new upgrades will revert to after a few months of boring QSOs.

Hi!

I'm also looking into this antenna, I would really appreciate a copy of
anything you find out!

I have found that it is cheaper to buy one direct from Italy rather than
through the UK importer,
Waters and Stanton.

Anyways, let me know what you find out about it's performance.

Rob -
There are thousands of 2x2 callsigns in use, just as there are 1x2 and 2x1 callsigns - all just as valid. Hams should be somewhat familiar with the callsign allocation scheme, and if not you can edumacate them! ;v)
Check out the FCC FACT SHEET PR-5000 #206-S ("FS #206-S").
http://www.fcc.gov/wtb/csinfo/factsheets.html

Some people feel there is some prestige associated with group A & B callsigns. For example, a non-vanity Advanced callsign indicates that at one time, you passed a 13wpm morse test (whatever that means). As for me, I just like the shorter (4 or 5 character) callsigns.

My call is WA9CQ - a very unconventional call. Besides the obvious 'CQ' reference, the FCC never issued 2x2 calls beginning with 'W'. These became available with the vanity program, and I wanted a unique, easy to remember call. I got it! Some people have asked me if others are confused when I call 'CQ' on CW. The answer is, "I don't know". I've never had anyone comment that they were confused - only that they thought my callsign was great, easy to remember, etc..

So, I think you should go for it. The Vanity headquarters has a number of "cute" callsigns online which are most amusing. Check out http://www.carroll-usa.com/vanity/ to see callsigns like: AB0ZO, AL0HA, K1TTY, K9DOG, W0MAN and even a very brave soul, W1MP.

Originally licensed in 1965 I wasn't thrilled with a having a KB9 call. While I thought of asking for my old WN9 call I really wanted a 1x3. I now live in the 9 call zone but since I also have a home and relatives in Ohio where I worked for several years, I chose the W8.

After 13 years working in Emergency Medical Services and 2 in law enforcement, the EMS was the logical choice. I'm very happy with the call I chose. Pick something that makes you happy and go for it!

The really unfortunate part is that the FCC views the ARRL as the
amateur's representative (lobby?) of ALL the hams, not just their few
remaining members....and so does the ITU.

I'm still reeling from the audacity of the FCC to throw their comments
on Morse testing in the trash and do the right thing.....(c;

Larry....Why does a club's magazine cost DOUBLE what the for-profit
magazines cost??
How can a for-profit magazine company own a ham license??

I need a volume control / squelch control for a Regency MX-7000 scanner. This is an all band unit (30mhz to 1300mhz with NO GAPS.....

Also need LED lamp for the same. I tried several LED's I found at Trasher but they didn't work well.. prefer something close to an origonal repalcement.

The volume control sticks.. have tried contact cleaner..... had unit for several years... it can be used on a desktop or mobile mounted.... I did have problems with they key panel... I fixed this by constructing a switch grid and wiring the switches the same way the touch panel was wired.....
all I needed was a new touch pad.. but was unable to get this because regency had discontinued this model.... the MX-7000 is only a 20 channel unit....
Today, you can get scanners with 1000 channels.

I'm tired of its usage here too. However, privilege is the correct word. The problem is that so many amateurs (or at least a good subset of those here) are arrogant and pompous, so they use it not as a badge of honor but as an insult. This attitude needs to change.

> Does AAA go around referring to your driving "privileges" ? How about
> NRA ? No. Yet they can be taken away just as "easily" for purported

[Aside: Note that for drunk driving, the driving part is the "privilege" while the drinking (but not to excess) is a constitutional right (via the 21st Amendment which repealed "prohibition").]

What new privileges? The R&O didn't create anything new (except for a "club callsign administrator" which isn't relevent to this context) - it only removed things from the rules.

The funny thing is that I hear about these things too happening in other parts of the country, but never around where I am (Southern California - with its "animal farm" collection of operators on the infamous 145.46 and 147.435 repeaters). If the FCC were serious about enforcement, they would have dealt with the problem operators here almost a decade ago. Self-policing is a joke. [So is the ARRL's "ARES" which they maintain separately from the "RACES" rules; the latter being the officially sanctioned emergency sub-service. The ARRL can't seem to live within the rules without attempting to dominate all operation.]

> Just another example of ARRL trying to control the means of "production"

I'm not a "paper operator" (as above), but although I am an ARRL VE, I am NOT an ARRL member. Could it be that these other 500k recognize that the ARRL may not actually be in their best interest enough of the time to make it worth supporting? I support them via its testing function but I'm not a member because I often don't agree with the organizations internal or external politics. Furthermore, if we want something done, why use them? I found it a bit more effective to write my Representative in Congress, who happens to sit on the Commerce Committee (The oversight committee over the Department of which the FCC is a bureau), or on occasion, I have let a LOCAL organization (usually one of our frequency coordinators, when I agree with them) deal with an issue in their FCC petitions or responses, etc....

Jailing, no. Threatening, most certainly. And not just reporters.
I had a GM who walked out of his office and threatened, en masse,
the entire staff if anyone even uttered the word, "union," despite
the fact that it's a felony to do so. And if you read the Employee
Manual that was released last year, you'll see some serious attempts
to curtail personal activities, business contacts, and other non
company approved relationships.

Before multiple ownership Corporate passed around a form letter,
and a list of Congressmen and Senators names and addresses,
applicable to everyone on staff. The letters were signed, and mailed
from the station, urging Congress to pass multiple ownership.
Refusal was not an option.

With your last thought, maybe you should form a "family club" and then get a
club call and vanity-ize that.....

The ARRL is according to various snips and bits in QST and
other places trying to start postition itself as a organzation of
Radio users So the advertising of GRMS or even FRS stuff is not
suprising. As to the number of SK's I like you find it ominnous but
if the ARLL is really doing about the number of hams, it is keeping
the measure a close secret.

Ham fests are down I expect that is part of the fact that a

That her little teary-eyed, histrionic display was phony as
a three dollar bill. Just as was the claims of the Gestapo-like
tactics of the agents in supposedly breaking down the door.
If there was anything approaching Gestapo-like in this incident
here, I'd venture to say that it most closely resembled ...
the Reischstag fire. ;-)

Duh!! I was a street reporter for the Nashville CBS affiliate for a number of years and unlike whomever you pointed your Sony for, we did *not* rehearse news stories...period. Covering points to be discussed...yes. Suggesting how the question would be answered...NO!

(Suprise!!)

Actually, the ad does indeed show a hint about whether or not ham radio is truly headed for the grave. It shows that there is ham radio manufacturer that is willing to put time and money into building radios for a non-ham market, partially in the hope that doing so will expose more people to two-way radio communications. That, in the long term, will lead to more hams.

To some extent ham radio depends upon CB radio, FRS, and GMRS radio. The large bulk of new hams are recruited from the ranks of operators on those "other services," including scanner enthusiasts and shortwave listeners. As a company, we are committed to bringing new people into the amateur radio service from as many other places as we can. Just check out our "other" website: http://www.hamtest.com.

Len,
"Dwindling" number of hams? I doubt that. Lack of "volume" of new hams? I doubt that too, the 'lag' time for processing the recent 'glut' of applications should indicate that the 'numbers', if they are dwindling at all, is a very very slow 'dwindle'.
If it's of any significance at all, the GMRS advertising in QST seems to indicate a 'tilt' of the ARRL toward profits rather than service. That's not really 'new' at all. Perhaps you might substitute "rabid scramble" for the word "tilt", above.
Hamfests do not attract the numbers they did a few years ago. I think this has more to do with the economy, and availability of equipment through other means, than an indication that 'ham radio' is dying. Don't know about you, but paying $10.00 to get in to a hamfest just 'rubs' me the wrong way. (An yes, I know it costs money to put on a hamfest.)
The 'non-ham' gear advertisements? Guess that means you could/should capitalize that "Rabid Scramble" above.
'Doc

I use just a wire dipole cut for 40M as I don't have the space to put up an 80M dipole. The cost was under $20 including the feedline.
Construction is simple: just use regular lamp wire and split down the middle. I used rg-58 as the feedline with a balun made from the feedline connected near the feed point of the dipole. The ARRL handbook has the very simple formulas for making coax baluns.
It works well enough to get me out to Europe, Japan, Australia, Russia, South America, and of course the USA and Canada here in CA with good signal reports.

Hope that helps
Ken

I haven't been in the newsgroups lately but has
anyone heard that RT Systems is going out of
business tomorrow (April 27th)?? They are in
Ala. and Florida and make the ADMS-1E software
for the Yaesu VX-5R, VX-1 and VX-500.

I called them yesterday to do some price checking.
The salesman said that they would be only open until
Thursday which I thought they were closing for Dayton.

No, he said, AES had bought them out last Wednesday
(April 17th). God, I wish I had know! Must of have been
some real bargains.

As it was I had to go to R&L Electronics. They had not
heard about this either.

W4CSC,

My friend. you're throwing up clay pigeons and then shooting at them. My point was the real dichotomy between the business and personal on ham radio.

Whatever implementing rules have been put on and off the books, an argument can always be made against bypassing commercial enterprise with ham radio. And there are those who feel strongly about that issue.

As the title of my post shows, I'm in tune with the legality of phone patching. We should not whip up controversy where it's absent nor assume our positions are the only ones, as there will always be people with deeper perspectives.

uhhhh, after reading the faq, im struck by this statement ":
Hams don't just swap ham radio gear, and other folks besides
hams swap ham equipment. If you have radio equipment, or test
gear, or computer stuff that hams would be interested in, here's
the place." it seems to only acknowledge "hams" as having stuff
to sell. guess what? i dont want any ham stuff. what i want is
shortwave stuff. it is different. so, if we have to ammend the
charter i say lets do it. i realize this is not a democracy, but
then again, what is...
now, you might argue that this is not the proper place to argue
these points, but, as the founding fathers of the usa
discovered, theres no place better to start than here. looking
forward to your comments,

2864. Re: New Poll - STOP THE SPAMMING OF THE NEWSGROUP

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-26 00:00:00 UTC
From: Jeffrey Herman <jeffreyh@hawaii.edu>
Message-ID: <Pine.GSO.4.21.0004261644440.13435-100000@uhunix5>
Source record: 112527
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

To "Centerpoint":

I might add that dealers are asked to voluntarily reframe from posting business ads to the rec.radio NGs for the simple reason of preventing hundreds if not thousands of daily business-related advertisements which would flood and distroy the usefulness of these *DISCUSSION* groups. Think of the number of electronics and radio dealers across the country who would love to advertise all their products and sales listings, but reframe from doing so out of respect of the established guidelines. We'd be literally buried in ads if they ignored the charters. Our rec.radio.swap NG, the sales catch-all for the rec.radio.* hierarchy was created with the single-unit buyer/seller in mind; that group, too, would be distroyed if commercial dealers ignored the voted-on guidelines.

You might consider going through the established newsgroup-creation process and propose something like a biz.radio.sales newsgroup, out-side of the rec.radio hierarchy. (If such a group were created, it would probably end up being flooded by other dealers and businesses!)

Sincerely,
Jeffrey Herman (rec.radio.* FAQ maintainer)

Oh, come one, Wolf. That is a little rough, isn't it?

You probably pay for things you like all the time. Didn't you like the car you drive? How about the watch on your wrist? Or the radio you use? Or the computer you're typing on? You liked all of those things enough to pay for them, right?

So what's wrong with paying for a specific callsign that you like? Okay, perhaps paying for a callsign is not for you, but it makes some people happy. And I don't see a thing wrong with something that makes people a little happier.

Of course, I'm biased - I have a vanity callsign.

If this NG was flooded with ads then it would be a chore to read
and it would alter the character of the group. Tho, it doesn't
appear to be headed that way at the moment.

But the specter of mass postings from dealers gives one pause.

An occasional posting by a private party is acceptable to me. But
if we allow the camel's nose in the tent...

FWIW, I bought a DSP-40 from Centerpoint on Ebay a few months
ago and recently bought an item posted FS in this ng by an
individual who lost interest in swl.

**********PROYECTO CD-Rom RadioSoft/2000
****
**********LA MEJOR SELECCION DE SOFTWARE DE RADIO AFICIONADO**********

Que es el Proyecto CD-Rom RadioSoft/2000 ??

Selección de los mejores programas de Radio Aficionado para todas las
modalidades de Radio
Se trata de la edición anual de un CD-Rom donde esten representados
todos los programas
de Radio desarrollados por Radioaficionados Españoles,además el CD-Rom
RadioSoft/2000
Pretente ser un escaparate donde todo Radioaficionado que realice
proyectos pueda
darlo a conocer de forma gratuita como por ejemplo,software de
radio,kits de radio
circuitos,modems,antenas,receptores de satélite etc..
Otra idea para este CD-Rom RadioSoft/2000 es que todos los
radiaficionados puedan
Exponer sus trabajos como si de una Exposición se tratase pueden
incluir en este CD-Rom
RadioSoft/2000 como por ejemplo exponer imagenes recibidas a través de
satèlites meteorológicos
listados de frecuencias utilitarias,imágenes de sstv,wefax etc...

Que contiene el CD-Rom RadioSoft/2000 ??

Programas para recibir Mapas Wefax i Satelites Polares
Nooa,Meteosat,Okean etc.. recibelos
en tu ordenador con tu tarjeta de sonido,disfruta de la meteorologia en
tu pc.
Programas de seguimiento de Satèlites los mejores para Windows95/98 o
MS-Dos
Programas de Log para que lleves al dia tus contactos DX o captaciones.
Pogramas para ver las ùltimas estaciones DX conectadas en tiempo Real a
través de Internet
Controla tus equipos de radio y receptores por odenador con los mejores
progamas de CAT.
Se trata de un CD-Rom con programas muy seleccionados y con las ùltimas
versiones Cientos
de programas de Radio ordenados por
categorias,PACKET,SATELITES,LOG,SSTV,CAT etc...
El CD-Rom RadioSoft/2000 dispone además de mucha informaciòn
complementaria como
Frecuencias,Balizas Direcciones de Internet por materias inprescincible

para escuchas y DXistas.
Dispone de una carpeta denominda Soft EA con Programas de Radio
desarrollados por Radioaficionados
Españoles en idioma castellano,en esta 2ª edición del CD-Rom han
colaborado muchos colegas EA

Como Puedo Adquirir el CD-Rom RadioSoft/2000 ??

Si estais interesados en recibir el CD-Rom RadioSoft/2000 podeis llamar
Movil:(649)302362 tambien por via E-mail a tarentola@yahoo.com
indicando vuestra direcciòn
El precio por de cada CD-Rom es de 3.500 + gastos de envio
Contrareembolso

Como Puedo Colaborar en el Proyecto CD-Rom RadioSoft/2000 ??

Muy simple,puedes enviar cualquier información sobre
software,fotografias de Wefax,Sstv
Proyectos,Kits de Radio o cualquier otro proyecto que quieras dar a conocer.
La inclusión de cualquier información es TOTALMENTE GRATUITA !!
Puedes enviar la información a la siguiente dirección:

Proyecto CD-Rom RadioSoft/2000
Apartado de Correos 31
CP-08758 Cervello
Barcelona

NOTA:
ESTE CD-ROM NO CONTIENE PROGRAMAS PIRATA,EN TODOS LOS CASOS SE INDICA
SU SITUACION LEGAL,INDICANDO SI SON SHARESWARE,FREEWARE O DEMO,ADEMAS
EN EL APARTADO DE SOFTWARE EA,SE DISPONE DE PERMISO DEL AUTOR PARA
INCLUIRLO EN EL CD-ROM RADIOSOFT/2000

Saludos

Ramòn EA3CFC y Antonio EA3AHW (Coordinadores del Proyecto CD-Rom
RadioSoft/2000)

E-mail: tarentola@yahoo.com

Ummmm, _which_ ones now? Pictures 3 and 5 clearly show the
opposite. Picture 4 isn't definitive, but certainly doesn't
show what you claim.

FWIW, picture 2 clearly shows the _door_ that Marisleysis
later did a show'n'tell on for the media, showing it
broken at the doorknob (see USA Today, Apr. 24, 2000, p. A-4,
and the CNN video of her little "tour") and on the floor,
some hours later.

In picture 2, however, it is intact. So just who were
the thugs that so cruelly broke her doors?

Cheers,

Source record: 112605

Is ham radio really finished. Has our dwindling numbers
and lack of volume of new licencees finally caught
up with our general population of greying heads?

Perhaps page 6 of the May 2000 QST holds an subtle
answer. On this page you will see a full-page 6-point
color advertisment for the Pryme UHF HT. Just another
HT you say? Read the fine print. The Pryme HT is a
non-Amateur band, 8-channel GMRS radio. (Suprise!!)

I haven't picked up a QST in close to 12 Years. Mainly because
I found the content therin to be 55% advertising, with the remaining
dedicated to construction articles using the most esoteric and
hard-to-find components available. The new QST I found to be a
bit different, not as thick as before, slightly less advertising and
some good construction articles tied in with WWW pages for tech
reference. Not bad. What I did find ominous was the greater number
of SK listings from before. I sure hope more hams are being recruited
to fill the gap. Hamfests seem to be alot smaller from before
also and not as many people either. (I went to Dayton last year an
attendence was WAY down from my last visit in 89-90)

It seems ominous to me however that QST is now accepting
advertisments for non-amateur radio gear. I hope this decision
was purely a marketing one, instead of being symptomatic of grasping
at straws for members and revenue for a dying hobby (?)

Len - Florida
Call lapsed in 79.
Never renewed. Got disgusted
since the whole "Incentive Licencing"
disaster of 65-68.

I turned in my paperwork on the 15th at the ARRL test session in
Charleston, SC. I still have no indication of the upgrade.......

A friend turned in HIS paperwork at the April 19th test session the
Wescars group gave in Goose Creek, SC. He's already gotten his
upgrade on the FCC ULS and has dropped the /AE from his call.

Wescars - fast

ARRL - slow

Why?.......
Larry

No. But he has some interesting books.
Are you a fan?

By the way... If you have any good ideas, I'm all ears. George also
gives credit for suggestions.

I currently have two knuckleheads that have moved into the neighborhood,
and the neighbors are livid. One is a drug addicted truck driver that is
a real wacko, and the other is a narcissistic landscaper who has grand
plans of using the local government or the homeowners association to
force everyone to use his lawn service through a community contract.

These are the kinds of horse butts that I have to put up with.

Thanks for the kind joke about my buddy Goerge, and have a great day.

I upgraded Apr 15th, it showed up the following Tuesday in the ULS database.
I went to a W5YI session in Sunnyvale CA. I also show up in QRZ and Buckmaster
as an extra.

Heard the ARRL is having trouble with its web site, apparently some clown
messed up the internet DNS addressing info (which figures out where
arrl.org is located in the computer world).

No, lets make this more truthful (make this more related to this discussion). If my child (daughter or son) was being held in another country, by distant relatives who refused to return that child to me, I darn sure would want the police to go get my child. And I would not really care if they had to use a thousand men, armored cars, tanks, planes, aircraft carriers, cannons, or nuclear bombs, to do it.

Look, when a person starts messing with a child, that person's civil rights is the last thing on my mind. As long as that child is safe, and returned where he or she belongs, I don't really care if the person who took that child goes away from the incident on their own, or in a body bag.

In your senario above, your're trying to put my wife in the shoes of Marisleysis Gonzalez (Elian's cousin - the young crying female Gonzalez). My wife would never do such a thing. She would never take the child of one of her relatives. It would be unthinkable. Therefore, there would never be an occassion where police would have to enter our home to take a child back to the parent.

Now, if the Gonzalez family thought the father was abusive, or otherwise harmful to the child, then perhaps that would be a slightly different story. But there was no ligitimate evidence that any form of abuse by the father actually occured.

And the crazy claim that the boy's country might be abusive to him, or that he might be better off in this country, is really stretching it. For all you know, Elian could grow up to be the next leader of Cuba, and could live the rest of his life in total luxury. Who knows what Elian's future might hold? But, whatever the case, you simply cannot go around

yanking children from their parents because you think something bad might happen in that child's future.

Rob,
Part of your reasoning isn't true, there are a bunch of
2 X 2 call signs on CW. So, wouldn't worry about that.
It all 'boils' down to if you want the call sign or not.
If you want it, get it. If someone doesn't like it, too
bad. Just remember, your the one that has to 'live' with it.
'Doc

Source record: 112617

Rob wrote:
>
> Does anyone else have personal experience, good or bad, about using a
> "too vanity" call?

Well, Rob, I've been using a vanity callsign for some time now, and I've not had any real negative feedback about it.

I got the vanity call because the original issued callsign did not really fit my situation. I was a DoD employee for several years, and got the first callsign while living in a state where I worked at the time. Shortly afterward, I moved to another state, and the callsign didn't really "fit" anymore. On top of that, the old callsign was difficult to say (using letters or phonetics), and even more difficult to remember.

So, I figured that since my callsign didn't "fit" anyway, why not get a callsign that was much easier to remember, even if it didn't "fit" either.

Of course, this left the problem of what callsign district to use. Note that I travel around a lot, and don't really have a "home" state in the conventional sense. My original callsign was issued in district 4. When I applied for the vanity, I was living in district 9 for several months. Since then, I've lived in district 4, district 9, and district 7. And, right now, I'm back in district 4 again (and no longer associated with DoD), but a move to district 6 may come soon. I've even lived for a year in Italy since getting the vanity (this fits into this discussion later)

In the end, I simply picked a state. Since I had Texas listed as my official home-of-record at the DoD finance office at the time (no state taxes), it seemed like the natural choice.

As for the letters, the "NET" is rather obvious. I enjoy the interNET. And I enjoy on-the-air NETs. That is a group of letters that are easy to say, and easy to remember. So, with that selected, the only remaining issue was the first letter. That was selected simply because that was the only letter available with the "5" and "NET" not already selected.

So, my callsign ended up being W5NET. I've had a few comments about it over the years. Of course, people on the internet (radio users or not), think it has something to do with the internet (they think I selected it because of that). But, on the on-air nets, people think I selected it because of that. Either way, it works. I've not had many people who were not able to pick up my callsign quickly (even overseas - the interNET is everywhere, even in Italy).

A few people have a hard time with the district number (they like to write down the local district number instead of what I actually said), but most are aware that the number's don't mean much today with the vanity system in place. And, on occasions, my strange callsign number has led to some interesting conversations about travel.

In the end, I'm satisfied with my callsign. I've not regretted the switch.

Dwight Stewart (W5NET)

MY vanity call usually gets a big "Huh? I don't get it."

Long ago, I was WN4YIQ, and became a tech with N4DCT. Then years went by. I got back into ham radio with more enthusiasm. I decided to make a fresh start, shelled out 13 bucks and got my current call sign. Not trying to fool anyone, I just thought it was a minor hoot to have a cute call. As it turns out, it doesn't even register most of the time. I guess I seriously misjudged the demographic of the average amateur radio operator.

D'oh!

Aaron, I know what you're referring to -- there used to be something
in the regs which stated that we were not to use amateur radio to bypass
commercial communication services. A reading of 97.113 reveals that
stipulation has been removed.

David,

Actually, the ARRL site was not touched at all. It was the Network Solutions
site, where www.arrl.org is translated into a physical internet address, that
got hacked. The domain name arrl.org was redirected to the hacker's site.

Why? If an Advanced class licensee doesn't know where to operate or at least where to find the information maybe they shouldn't be on the bands at all. I think the retest idea was best of all.

I pondered that question, Rob, before switching my call. The quest to see how small you can get the call reduces your transmit time, which sounds fine. It also makes you more invisible to people listening you want to connect with, on any mode. I wanted an old, original W4 call. I wanted one since 1957 when I got my license. The original licenses have a certain "feel" to them, familiarization I guess, on the air. I was also trying to get one that was very easy to use on PHONE where I would not have to keep repeating the N and M of my upgrade license KN4IM, which I grew to HATE after a few years of repeating it over and over, ad nauseum.

I chose one that combined the whole phone contact into one phrase.... W4CharlestonSouthCarolina....my QTH. Sorry, I'm not much of an egotistical maniac when it comes to my initials. The results have been fantastic! I say it ONCE. They have my call AND my QTH....all in one breath. I make sure I say W4CSC in my 10 min period to keep the bureaucrats happy. But when you're in that pileup, they pick out Charleston South Carolina easy and have it all!

The guys at WCSC-TV also think it's cool and are jealous they didn't get it first....(c;

God, Bob. You need to come out of that room more often. ATT hasn't had their thumb on top of the FCC for many years. WE even have different long distance companies now, reducing charges to 3c/min from the competition! The only reason that old rule was in place is because Ma Bell PAID someone to put it in place.....

It hasn't been a valid argument for 20 years, now.

Where have you been, Mars??

Most corporations don't hold your family hostage to compliance with this
policy, or threaten you with loss of career (not just job) and even jail
if they catch you violating it.

There is a big difference, especially in the news industry.

Well, when you put it that way, the only thing that makes us put some
75-year olds on trial for their lives is the "bitter and punitive
attitude" held by those who experienced mistreatment by the Third Reich.

The Third Reich is 55-years-gone. The Castro regime is still in power,
and there is no indication by any human-rights watchdog group that they
have made anything more than token changes over the last 40 years.

2900. Re: recent upgrades

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-26 00:00:00 UTC
From: Martin Meserve <meserve@my-deja.com>

Expect even more delays and errors. The current load has to be
tremendous for the VEs and the FCC.

I upgraded to Advanced about a year ago, when things were not so
busy. In the process, the FCC had replaced all occurences of
"OR" in my address with "AZ", my state designator. This changed

xxxx W. North Lane
Peoria, AZ

to

xxxx W. Nazth Lane
Peazia, AZ

I emailed the FCC and let them know about the error and asked
to have it corrected. I was sure that the license would not
even make it through the US Mail (although it actually did,
score one for the US Post Office). When they finally corrected
it, they only corrected the city. I wasn't until I upgraded to
Extra, a couple months later, that they finally got the whole
thing corrected.

All I can say is "Good luck on all your upgrades". I hope none
of you run into the problems that I did.

--> That'd solve nothing, really, that wouldn't be solved simply by having a unique key on the system, like ssh uses. Having it built into the hardware doesn't really make it any more secure. ssh can use a public/private key pair to ensure a machine is who it says it is. The only easy way around it is to compromise the remote machine and steal the private key -- and if someone could do that, they could just as easily read the processor's serial number and fake that. The big difference is you can change a compromised key. You're stuck with a compromised serial #.

Nobody took Elian until Saturday.

One thing that you don't seem to understand is that Juan didn't have
custody of Elian. Elian was born several years after his mother
divorced Juan -- Elian is illegitimate. He had little contact with Juan
over the last several years, and the Cubans have offered no copy of any
report to the police that Elian was missing -- the first that Juan seems
to have known about it was when Elian was reported to have been rescued.

There is no "nurturing home" for Elian to return to.

No, only Elian's statements. But then, he is the only one who would
know, right?

> And the crazy claim that the boy's country might be abusive to him, or
> that he might be better off in this country, is really stretching it.

If you say so. Please then explain why so many people are trying to
leave Cuba, despite the high probabilty that they won't survive the
trip?

Gee, Dwight, the Child Protective people do this all the time.

Yep. TFB. I'd have to ask WTF these people were doing oout
there anyways.

> [. . .]
>
> They knocked. They identified
> themselves both in English and Spanish.

Once again, TFB. What were they doing there? Why did they
have a round-the-clock bunch of people there. Oh, yeah, I
forgot, they said they were going to form a human chain
and not let the feds in. Yeah, I guess I would have said:
"Get them out of the way. . . ."

> [. . .]
>
> Then she lifted him gently into the
> minivan as agents sprayed the crowd again.

A pruident decision. Doesn't sat anything about them "[not]
doing anything". The feds didnb't spay anyone just out at
5:00 AM haveing a barbie on their fron lawn down the block.

In fact, the footage I saw indicated far more than some
passively observing crowd. Fortunately, the quick action
prevented them from causing any _real_ trouble.

I'm not the least sympathetic toward the people complaining
that the raid was done in the wee hours of the morning. Once
again, quite prudent. The people bitching and moaning here
are upset because they didn't try it in the middle of the
day, with thousands of anti-Casto foamers around, so that
there _wasn't_ a big bloodbath. They are bitching because
the operation _was_ so successful. TFB.

> [. . .]
>
> The Gonzalez house was a mess. The
> front door had an ugly gash from the battering
> ram, . . .

You mean the one the put a couch in front of to deny the
entry that they had promised they'd allow? "We'll stand adise,
our hearts will break. . ." *sheesh* These people had
_no_ intention of handing over the boy. They were _never_
negotiating in good faith. Right to the very last second,
they were not going to turn over the boy.

> . . . and a bedroom door was torn jaggedly
> in half. In the corner of the bedroom, a
> framed picture of Jesus sat splayed in a
> corner.

Yep. COvered above. The broken door in the bedroom
was indded Gestapo-like tactics. But, as the URLs
I gave you show, the Gestapo tactic here most closely
emulated was the burning of the Reichstag. The bedroom

door is intact in the second picute of the agent entering
the room, _after_ he came in. It is only later, long after
the agents had left again, that the door is shown broken
on the floor in two pieces. So who broke it? Who _were_
the "jack-booted" thugs here?

And I'm _sure_ that the agents started throwing around
pictures of Jesus just for kicks. But I'll take your
word that _someone_ did. *sheesh* These folks are loony.
Loony enough to throw around pictures of Jesus and
try to blame it on the Feds for propaganda effect, it
would seem.

> Elian was gone.

No, sorry, you have to prove that he WAS. Using information not
supplied by Castro or by a source under Castro's control.

Uh, Perfesser, I'm PART of the media.

I also know a number of people who left Cuba in the last few years, who
have proven trustworthy after arriving here, and who aren't part of the
"Cuban-American community" of Florida. I've never been to Florida.

I base my opinions of Cuba on what I am told by these people. What I
find absolutely astonishing is that so many people who idolize JFK
ignore his statements about Castro and Cuba.

This is always a problem, isn't it? Some photojournalists are better at not doing this than others. Someday I will find a reporter who doesn't do this.

Yep. Across the street. Nothing from the NBC/pool photojournalist, who was in the house.

> I also saw the genesis of an unruly mob heading for
> the scene throwing various objects that was met with a measured
> response.

Watch the whole roll again. INS showed up and immediately began
spraying the crowd (and some of the media folks) across the street, OVER
the barricades.

Well, the news people are PAID to be there. The others were exercising
their Constitutional right of peaceable assembly.

Or are you now going to claim that the INS had a warrant to check for
curfew violations?

Thank you for your expertise, Herr Goebbels. Please explain this to the negotiators who were on the phone with them at that moment, who say the exact opposite.

Perhaps so. And maybe they hired someone to put on INS ninja suits to beat the NBC cameraman, buttstroke his sound man, and to wave machineguns in everyone's faces.

After all, anyone who disagrees with you is part of the "Vast Right-Wing Conspiracy," right?

I wonder what JFK would say about all this?

Didn't you say NO ONE can copy it? So where did you get the location? I know; you taped it at 15 and played it back at 3 3/4. No, that still would have been too fast. You must have done it twice.

<<SNIFF>> Sad, them going out of business. I bought my first radio from them. Of course, this was just last year, but still... They had good support, and the people knew their equipment.

I tried to call their Fla store to order a radio they had in stock. Unfortunately, it took me so long to talk the YL into it that I missed the shipping window. Arrrgh. Guess I'll just have to wait until the Hamfest in Birmingham next weekend (May 6/7).

It's odd that AES would buy them out, then promptly close the stores. Normally, when you buy out someone you are looking to expand your business into new locations. It's almost as if AES just wanted to get rid of the competition and get some inventory, rather than expand. Has AES made any formal announcements on the subject?

Will the FCC issue KH, KL and KP callsigns to hams in the continental US? IMHO, they shouldn't... We all know these are for Hawaii, Alaska, and Puerto Rico. But then I don't think they should issue out of district calls at all.

Herbie may be number 1. As a contester, he is world renowned, as an intellect, he is seldom matched, for lifestyles, he is the envy of many.

But he remains woefully without contrition, a captive of his own self-denial. While careful legal analysis shows great cases in law, they are bankrupt factually. Herb, no kingpin of crime, cannot bring himself to admit his de minimus tinkering with Calls and his subsequent lack of candor with the Commission.

Long ago he could have said: "No, I did not defraud Calls nor take anything from them. But I used bad judgement; I hacked with Calls' security system. And for that, I sincerely apologize."

A simple statement yet an impossible one for Herb, it would have prevented adverse consequences from the moment it was issued. The judges were waiting for like words.

In my view, all the legal arguments in the world, no matter how efficacious, cannot overcome his lack of factual admission and contrition.

OK, what did I learn on NPR last July?
That the CIA introduced Dengue Fever to Cuba in the 1980's in order to reduce the population there. (Dengue is not endemic to the island.)
Now, did anyone mention the 10s of thousands of Cuban "advisors," er, mercenaries, rotated into Angola, Mozambique, Zambia, Zimbabwe, ex-Congo Francais, and Nicaragua during the 1980s? Or that Dengue IS endemic in some of those areas?!
!@#$ NO!!!
Now, what network do the card-carrying Communists and Socialists I know listen to?
THAT'S RIGHT, NPR!!!
And what do they say about the Cuban advisors?
That they were a Socialist Peace Corps!
And where did they learn this?
THAT'S RIGHT, NPR!!!
Now, what I'd like to know is, how do you plant corn with an AK-47, or irrigate it with a T-55 Main Battle Tank?

Okay, I see you're going to be a hard case. I could go on trying to name things you might have paid for because you like it, but that could take a while (especially in your case).

Obviously, you like your wife (heck, I like your wife), but I don't know if you paid for her (keep your mind out of the gutter - I was talking about the marrage license, etc).

Anyway, you get the idea of what I was saying.

During discussions of this that have been going on in our faculty club, it seems (anecdotally) that most of the Cuban-Americans that we know are vehemently (and uncharacteristically) in support of the "Miami Relative" position. These same people are generally very moderate about their politics and opinions. It's interesting to note that from this same body of samples, most people from other Caribbean islands (including Puerto Rico) tend to side with the US Government position. There is something about this issue that really lights up Cuban expatriates.

While I believe that there is more than meets the eye about this whole thing, it's important that the US goverment not be successfully held hostage by a small group of protesters with extreme opinions.

By the way, I consider myself to be a conservative on most issues.

Doc,

Wait a minute. Guilty of what? Remember, we are talking here a felony count and an administrative action wherein he was found to have lacked candor in front of the FCC.

But it could have been avoided.

Legally, he cannot be guilty of "possession of a counterfeit access device with intent to defraud," because no such device was identified at his trial. Numbers in his head is too vague a concept to stand up under the law--and there was no one number described or entered into evidence. If he had acted forthrightly before the FCC, he wouldn't be facing license non-renewal of his ham license.

Even in his defense, he has performed anathema to his own interest, demonstrating more of a potential personality disorder than the legal culpability he has ordained.

Hi. I'll be spending a few days in Death Valley soon and would really like to have VHF/UHF communication in case I need road side assistance, etc.

Are there any such repeaters that cover Death Valley? I looked at a map and the repeater directory for Inyo County and could find precious few. The ones that were there seemed to be mostly to the West of the park. It's not clear how much coverage the Valley gets from them, though. There seem to be mountains in the way.

If there are repeaters, what sort of rig would I need to hit them? HT? (<10 Watts) Mobile? (<50 Watts) Think vertical antenna mounted on my car roof. And what parts of the Valley would be covered?

Thanks,

Marc N7OLI

George,
Yes, there is a cooling fan in the TS-440. No, it
should not run all the time. The fan is controled by
a thermister(?) and should only come on when the heat
near the final transisters reaches a certain level.
If the fan is running all the time, I think I'd find
the reason why.

Browse through the older QSTs and you'll see company ads for
broadcast transmitters, aircraft transmitters, radar, ads
from the military trying to recruit radio operators (the
Coast Guard's ads used to read "Get paid to work DX!");
the ads have always been part of the enjoyment of reading
the radio magazines.

If present day hams have no qualms in calling themselves Extras by having evaded the proper protocol and testing to qualify them as such, then they should have no gripe against any ham wanting to legally avoid paying a telephone charge. The whole thing with the "illegality" of phone patching was concocted anyway by the phone related felon, KV4FZ from the Virgin Islands, who simply wanted all parties concerned to think it impossible that a fellow like he, so concerned with telephone patching "illegalities" on ham radio, could ever steal services from the Caribbean Automated Long Lines Service in the Virgin Islands. And of course, on whom better to blame the phone patch issue than the Jewish guys on Intercon? You anti-phone patching nitwits, go BARF yourselves.

I'll give you the benefir of the doubt, and assume for the moment
you're a reasonable person. Youfigure it out. If the above
bluster was -- ummm, shal we say -- a tab oevrblown and inaccurate,
might claims of "beating the NBC pool crew" amdd "using riot-control
agents on people _who weren't doing anything_" be also just a bit
suspect WRT their accuracy?

Look, we have some of these people's _pwn_ words for exactly how
reliable a "source" they are:

Did you believe Clinton saying that he never had a relationship with
Monica Lewinsky? Nixon, when he said he wasn't a crook? Even THIS
government doesn't find it hard to lie . . .and you believe what you are
told by CASTRO?!

> This doesn't sound like the story you are repeating here.

Gee, sorry about that. A lot of times the truth bears little
relationship to the official story. Perhaps you should complain to
Juan's handlers?

> And what's this obsession with "legitimacy"? What does that have to do with anything?

"Obsession"? I was merely mentioning it, and this is the only time that
I have.

What is has to do with anything is simply that there is no proof
whatsoever that Juan was a major part of Elian's life.

It could have been that, but all the copies I have, from the
upgrade process, look to be pretty clear. Some of the forms
I had to fill out myself. Maybe it was my handwriting.

I just thought that since I have been on their books for 35 years
that they wouldn't have any problem. My General upgrade, which
was only two months before the Advanced, went through with no
problem. Same VE, same handwriting.

From other postings, it seems that I am not the only one that
this has happend to. Could be their software wasn't Y1.999K
compliant.

Well, go figure. In the end, it all got fixed. It was just
annoying at the time.

I read it. Did you think about my response, or did your knee jerk kick in too quickly?

My point is that we ALL do walkthroughs when the situation calls for it. During the walkthroughs, reporters generally go over what will be discussed at which point. I've known a number of big-name talking heads who coached their interviews at one time or another.

I didn't see the skylink stuff, so I don't know what exactly was said, but the simple fact that there was a walkthrough isn't sinister in itself.

What I find a lot MORE sinister was the unprovoked and disabling physical attack on the pool camera team, and the likewise unprovoked riot gas attack on the people across the street.

True, the bulk of the right-wing militia gun nuts
programs are now on WGTG. Mark Koernkie and Alex
Jones for example have found a nice rock to slither
under in WGTG to broadcast their hate-speech
from. WWCR has mainly gone the way of goofy
faux-Christian programming, such as Brother Stair
and Texe Marrs belch onto the airwaves.

Hopefully however, Art Bell's legal counsel will be
able to shut this garbage-can of a radio station
WWCR down for good via a multi-million dollar legalsuit.
The redneck idiots they had running WWCR in 93 nearly
managed to burn their transmitter shack to the ground
from un-insulated 220 and 440 3-phase wiring lying about
on the ground instead of having it in an approved enclosure
as sane people would normally do. Shame they didn't "go
down in flames" (literally) the first time. Hopefully
they will this time around after Bell's lawyers are finished
ripping them a new arsehole...

I think that when the INS snatched Elian at the point of a machine pistol, they snatched the White House from Gore.

It's really too bad they beat up the NBC video crew, or we might be rid of Hillary, too. We still might be . . .

No problem here...assuming the "discussion" doesn't coach the
interviewee.

> I've known a number of big-name talking heads
> who coached their interviews at one time or another.

MAJOR problem here. This moves it from interview to press release. Do
you also super "Vote For Joe Blow" during the entire piece??

> I didn't see the skylink stuff, so I don't know what exactly was said,
> but the simple fact that there was a walkthrough isn't sinister in

I repeat since you've missed it three times...It wasn't a "walkthrough"
it was a rehearsal until the decibel level got high enough to suit the
"news" team.

> What I find a lot MORE sinister was the unprovoked and disabling
> physical attack on the pool camera team, and the likewise unprovoked
> riot gas attack on the people across the street.

Guess its all in the eyes of the beholder. I have seen views from a
number of camera positions that evidently weren't physically attacked
and kept rolling. I also saw the genesis of an unruly mob heading for
the scene throwing various objects that was met with a measured
response.

This is the first time I can remember supporting an action of this
administration, but my frustration with the neverending histrionics of
the "Miami relatives" has reached its limit. I'm tired of "negotiating"
the law.

We see the event through different eyes. So be it.

No, sorry.

From MSNBC: Then, suddenly, a shout came from the
crowd: ☐They☐re here!☐
A white van careened into the media
area, knocking over a microphone stand and
nearly hitting a man, who jumped out of the
way.

[. . .]

They knocked. They identified
themselves both in English and Spanish.
☐Open up! Open up!☐ they yelled. After 20
seconds, they brought up the battering ram
and ☐ pop! pop! pop! ☐ knocked down the
door.
Other agents, carrying weapons and
pepper spray, ran toward the crowd and
sprayed. Still others ordered the media to
stay where it was.

[. . .]

Then she lifted him gently into the
minivan as agents sprayed the crowd again.

[. . .]

The Gonzalez house was a mess. The
front door had an ugly gash from the battering
ram, and a bedroom door was torn jaggedly
in half. In the corner of the bedroom, a
framed picture of Jesus sat splayed in a
corner.
Elian was gone.
It was 5:18 a.m.

From NewsMax:

NBC cameraman Tony Zumbaudo was indeed on
the scene, complete with state-of-the-art
video equipment and a sound man.

[. . .]

"(Zumbado) said he was knocked to the ground
by agents and kicked in the stomach,"
reported USA Today. "We got maced, we got
kicked, we got roughed up," the NBC
cameraman told The New York Times. The
assault left Zumbado incapacitated for the
duration of the three minute raid.

Also from NewsMax:

It took five days, but at long last NBC News
is finally asking the Clinton administration
why it had Border Patrol and INS agents beat
up its camera crew, which had been
designated to provide live video coverage
for all TV networks from inside the Gonzalez
home as the feds seized Elian.

"It's fair to say that our people weren't
able to do their work because of the action
of agents," said NBC News Vice President
Bill Wheatley.

Clinton administration G-men repeatedly
struck the network's freelance cameraman
Tony Zumbado and his soundman Gustavo
Moeller. Both were then held at gunpoint as
agents carried out the raid.

Wheatley complained about the attack to INS
Commissioner Doris Meissner, who has yet to
respond.

The NBC News Veep told the Associated Press
that he was well aware that the camera crew
was covering a high-risk mission but, "Based

on the description we have, we believe that the agents went further than they had to and prevented (Zumbado) from taking pictures."

Also from NewsMax:

NBC Cameraman Hospitalized After
Elian Raid Beating

Freelance NBC cameraman Tony Zumbado has been hospitalized as a result of injuries sustained when agents for the INS and Border Patrol beat him and his soundman, Gustavo Moller, as they were trying to film the Clinton administration's gunpoint abduction of 6-year-old Elian Gonzalez.

Zumbado was the scene's designated pool reporter, whose video footage from inside the Gonzalez home was to be fed to all major broadcast and cable television networks.

[. . .]

Zumbado's NBC colleague, reporter Kerry Sanders, was outside the Gonzalez house in the pre-dawn hours on Saturday and talked to Zumbado and Moller seconds after the raid ended.

In an exclusive interview with NewsMax.com, Sanders said that Zumbado began to experience back pain over the weekend as a result of the attack. "I just got off the phone with Tony. Now he can't move really all that well." The NBC cameraman was removed from his home on a stretcher early Wednesday and was admitted to a Miami area hospital for an MRI and other tests to determine the extent of his injuries.

[. . .]

Unknown to the NBC camera crew, INS agents had already entered the house by the back door, Sanders said, and were inside when Zumbado opened the front door.

"As Tony makes it to the door, somebody inside the house grabs him and pulls him in and slams the door. Gustavo doesn't make it in. Gustavo's outside. He said one of the agents takes the butt of his gun and bangs

it right into his forehead, causing him to fall down. I saw the blood on his forehead.

"Tony is in the house but the plan all along had been that the camera was a pool camera and it was a live pool camera. So he's got cables that are dangling off the back of his camera that are now going into the house, slammed in the door. This is television equipment, this isn't your little home video camera.

"As the door reopens, which is only a matter of seconds, somebody is grabbing the cables, yanking them back. Tony's got the camera on his shoulder. They yank it back and pull it down. One of the cables gets pulled out of the camera, which is the audio cable. The video cable hangs on to the camera but it sends Tony falling backwards.

"At that point, somebody smacks him in the stomach. Tony is hit in the stomach and goes down. And then the agent puts his foot on Tony's back and puts a gun to him and says, 'Don't move or I'll shoot.'

"So, the camera is out of commission. Tony is now down and out of commission. Tony tells me that as he looks up around, he sees the family there and he sees these little red dots on Lazaro's forehead, on Marisleysis's forehead. Which of course are the laser sights from the machine guns. He sees them all trained there and then he hears what's going on in the back room. But he's not in that back bedroom because he's now down on the floor with a foot in his back and a gun to his head saying, 'Don't move.'

Sanders said that Zumbado has family members with law enforcement background and has actually undergone police SWAT training himself. As a former cameraman for the Fox TV show Cops, Zumbado had filmed hundreds of police raids prior to the Clinton administration's Saturday attack.

In fact, said Sanders, NBC selected Zumbado for the key job of videotaping Elian's abduction because of his filmwork on Cops.

"He knows exactly what these people are supposed to do when they go in because he's trained to do it."

The attack on Elian's home, however, was different, Zumbado admitted to Sanders.

"'Kerry,' he told me, 'it's amazing how humbling it is. You think you know how it goes down. I've been through the door with Cops plenty of times on raids. I know what it is. But it's such a different feeling when you're on the receiving end.'"

You _cant_ be serious.

This is a free-to-express-your-opinion nation moreover, it is
a global ng. Report to the FBI and ATF? I hope they come kick your
pansy pinko butt, you communist dumbass

Since when do you reign censor-supreme over this ng? If you dont
like a post, you report it to government agencies who will no doubt
have their time wasted by your report? BTW, they dont need whiny
reports from tattletales to see what is being written. Wake up

Grow a thicker skin America is not a nation of pansies who need
a large, overseeing government. If that is what you are aiming for,
your way will gladly be paid to a nation that will, without a shadow of
a doubt, oblige you.

There will also be _plenty_ of government people there to tell _you_
what you can say, think, or do. Kind of like what you are attempting,
but more so. I am sure youll find it quite accommodating.

You are the antithesis of our founding forefathers goals.

If she's elected, the chance that indictments will come down, is
low. Sadly her opponent has announced his diagnosis of prostate
cancer, and may decide not to run.

That's not good.

I actually prefer to listen
to either B.B.C. or R.C.I.
on shortwave Donnie. (that
is when I'm not listening
to NPR - grin)

R.F.P.I. is the shortwave selection I would
personally make, given the choice of listening
to them, or "Whacko Whoremaster's Crappy
Radio", or "Wideband Guttersnipe Transmissions
of Genitourinary".

Don, elevate yourself a bit. Educate yourself
also. Check out your local NPR affiliate on
the lower-half of the FM Band in your area
during the daytime. You will find much edifying
and informative programming that will give
you a MUCH better perspective over the pabulum
for the masses which so characterizes AM/FM
radio today.

Then, have yourself a nice egg or pumpernickel
bagel, or Caesar salad and take it eeeeazzzzy.

B. Bernie
The Bagel Man. :)

The warrant, according to a former district court judge, named Napolitano, writing in the New York Times, two days ago, said that there is no such a thing as a search warrant for a human being. That a search warrant is issued to find inanimate property, evidence to the commission of a crime. Further, the warrant that was issued for Elian's arrest was also bogus, in that an arrest warrant is only issued for the apprehension of persons suspected of criminal behaviour, which also in this case, did not apply.

As for the weapons...CBS news as well as NBC and ABC have been reporting that there were potentially weapons in the house. It has since been admitted by Reno and Holder that there were three separate searches of the house by federal and local authorities, including INS, that failed to find any weapons in the house. The house was watched, and the house was known to be weapon free at the time of the incursion. As was the neighbor's house.

At the time of the incursion, all media had been taking the pool feed from the site for some time, and were reporting about the house, family and neighbors, in large part, erroneously.

A friend of Reno, on the phone with her at the time of the incursion stated that at the time the decision was made to initiate the raid that the deal was all but signed between INS and the family, in DIRECT conflict, with the 11th District Court of Appeals ruling, by the way, with the family having conceded to all points demanded by the Federal government. The friend could hear Mr Craig, behind Ms Reno on the phone, veto the deal anyway, and launch the raid. Points at first admitted to, and then denied by Reno.

Don't blame Wood for being full of half truths. At this stage of the game, and make no mistake, it IS a game, half truths are all that anyone is getting from media, and 'official' sources.

The full truth will come out, it always does. But it's not going to be presented to the people of hte United States by official sources, because there is too much political clout at play in this matter. And the media, I'm embarrassed to say, are part of the problem.

Yep, I was told by the guy in the Alabama store that AES simply wanted
to eliminate them as competition. I live in the St. Pete/Clearwater
area and I now have to drive all the way to Orlando to go to a store,
and that's AES. I think not. From what I hear AES used to have a
store here, then closed it down. Now they've shut down RT. I don't
think they'll get much business from this area anymore. Everyone I've
talked to about it says they'l just buy online from someone other than
AES.

>I need a volume control / squelch control for a Regency MX-7000 scanner. This
>is an all band unit (30mhz to 1300mhz with NO GAPS.....

The MX-7000 was "the same" as the AOR AR2001 (apart from the 800-1300MHz
coverage) so try contacting AOR (USA) and see if they can supply the
AR2001 volume/squelch.

http://www.aorusa.com

If they can't we have a couple.

>Also need LED lamp for the same. I tried several LED's I found at Trasher

Again the '2001 lamp is what you need.

>problems with they key panel... I fixed this by constructing a switch grid
>and wiring the switches the same way the touch panel was wired.....
>all I needed was a new touch pad.. but was unable to get this because regency

Keypads for the AR2001/MX5000/7000 are getting hard to get hold of - we
have just one left.

How can a Mariana Guacamolean know so much about what went on with KV4FZ?
Do me a favor and go bust open a coconut on your head as if you're not doing
it already. Don't question Bob Sherin. He was AT TRIAL. He went at his own
expense to help the felon and what did Herbert do? Sold him a linear that
was stored in the Caribbean Sea. Stole $300 from Mr. Sherin. Janssen, do
everyone a favor and go post on a Japanese rec. radio forum and leave us
great Yankees alone. Sayonara you turkey.

Thank God for Liberalism. Lord help us if this country were dominated by rightwing ULTRA Conservative screwballs who care NOTHING about people but in only lining their own pockets at the expense of taxpayers. Leave it to the Conservatives to give a pats on the backs of pharmaceutical companies who gouge the hell out of the elderly. Leave it to the Conservatives to extinguish any plan for a comprehensive medical program in this nation to help ALL. Leave it to the Conservatives to back the cigarette industry so politicians can profit financially from lobbyists while we are poisoned and see the cost of medical treatment skyrocket. Leave it to a Conservative to leave the rich alone and tax hell out of the middle class. Leave it to a Conservative to cut back on the type of social programs needed to give eveyone an opportunity. Leave it to the Conservatives to put education on the backburner. Leave it to Conservatives to try and kill any decent legislation designed to better control gun sales. How many Columbines do we need before the jackasses realize that something's wrong? Leave it to Conservatives with shoddy pasts to try and run out of office a President who erred and apologized for it. Where are all the so called great Christian values of forgiveness and understanding perpetrated by the "family values" crowd? You're lousy hypocrites who are living in the America of the Wild Wild West in the 1800s and have insight and values and understanding where you sit. Conservatism has gone from an acceptable policy to one of ugliness, religious and racial intolerance and overbearance. It's a policy of narrowmindedness, deceit and cruelty. And those are compliments!

I've got 1/2 of a Drake C-line, and need an R4-C and MS-4 to finish it up. The details:

R4-C: Must be 5-position mode switch. I don't care if it has Sherwood or other mods, but must not be butchered. Filters and crystals a plus, but not required. Most important is that it be cosmetically very good, and with a minimum of corrosion on the chassis. Also must be complete, no missing parts please.

MS-4: Condition not that important, except must not be dented. Also, must have normal Drake MS-4 label in the front, and speaker must be ok. I don't need a power supply.

Please respond with price and condition to NeilR@innermedia.com, or you can call me at (603) 465-2788, or (yes toll-free) 800-962-2949

Thanks, and best 73's all.

Neil, N1DMA

If Jeffie had any understanding about grown-up stuff like this, he would
know that a warrant is ONLY a warrant when it is in full complaince with
the law. Call it what you like, if there is a fatal flaw, there is NO
warrant.

> As for the weapons...CBS news as well as NBC and ABC have been

This brings up two interesting points. Who's paying Mr Craig? That guy doesn't come cheap -- I somehow doubt that Juan Gonzalez is writing any checks. And why was Craig with Reno at FIVE IN THE MORNING?

> Don't blame Wood for being full of half truths. At this stage of

> problem.

To some extent. But remember that there is no cohesive bloc of people called "the media" who share the same views on everything. Even stations in the same network often compete for stories (I know of two CBS affiliates which routinely embargo uplinked stories from each other).

So, what you have are a core group in the Clintoon Administration who are willing to do just about anything to "normalize" relations with Cuba (Slick Willie needs SOME kind of legacy that doesn't include the word "sex"), another group which is more interested in the legality of the whole thing, plus one group in the media which is willing to play along, and the rest which are asking questions.

Go look at this:

http://www.herald.com/content/archive/news/rafters99/insdocs/search.htm

What does it say the search is for?

"... there is concealed a certain person or property, namely (describe
the person or property"

NOTE - that sentence above is pre-printed right on the form - can't
get more SOP than that. And the field is filled in with:

"THE PERSON OF ELIAN GONZALEZ..."

> That
>a search warrant is issued to find inanimate property, evidence to
>the commission of a crime. Further, the warrant that was issued for

How would they _possibly_ know that? Did they have metal detectors at the doors and did the frisk everybody? I mean come on - how can you say such a thing and expect people not to spew pop out their noses from laughing so hard?

We still don't know if there were guns in the house or not - the INS agents did such a good job that the people in the house were so intimidated that they wisely decided not to draw. But the raid only took less than three minutes - Elian was out of the house 55 seconds after the agents went in the door - they didn't stay around and search people.

Put it together, hook up a radio and a meter to it. Check SWR and
see if people hear you. An ohmmeter will only show continuity or
an open at DC. The AC characteristics can only be tested as a unit.

What's a good definition of liberalism you ask? I'm not looking in any dictionary for the answer but I'll tell you what my heart tells me. A Liberal is someone who cares about his fellow man and who has a broad encompassing view of society instead of tunnel vision Conservatism. A Liberal looks to expand programs while Conservatives restrict. A Liberal is tolerant of all peoples while a Conservative lives in his own church and bars anyone different from entering. In 2000 an American Liberal recognizes the need for better gun control while a Conservative is in the pocket of NRA extremists who thrive on fostering murder and mayhem in the States. A Liberal will write to his Senators and Congressman asking forlegislation to be passed easing the burdens of all of us from greedy physicians and drug companies while Conservatives feast off the proceeds taken in from their lobbyists. A Liberal has a vision of an ecologically better America while a Conservative is happy sponsoring toxic dumping non-stop because of big money interest enticement. A Conservative is a patsy for the intolerant religious right in this nation who want to push their stupid and bigoted agenda down everyones' throats. Conservatives want to control a woman's reproductive system; they want to ban abortion yet provide no answer as to what we do with millions of unwanted infants. Now chew on the info I just provided and I'll be back later to tell you what I really think of the festering zits on the backside of the American body politic. And just remember the America from 1930-1933. Millions unemployed on bread lines and in soup kitchens. Enormous despair with the ugly spectre of communism hovering over this nation. The idiot Herbert Hoover had no clue and neither did his Cabinet. The foundation of this nation was crumbling until a Liberal from New York named Franklin Delano Roosevelt came along with a new vision, the "New Deal", became elected and thanks to him and his Liberal braintrust, SAVED the USA from banruptcy, anarchism and/or communism
AF2Y, Doc

Leave it to a Conservative to cut back on the type of social programs
needed to give eveyone an opportunity.
Right. America, the land of the handout. What about the droves of
immigrants who come with nothing, and through their own strife and
toil, make something of themselves? Oh, thats right, its more modern
to just hold out your hand and bitch about not having everything you
see on TV.

Leave it to the Conservatives to put education on the backburner.
See above. Since when is it not up to the individual to get their own
education? What would you prefer...spoon-feeding everybody? The new
HAM licensees are spat on because they didnt wokd hard enough, but
you want cracker-jack diplomas? Havent I read time and time again on
this ng that what you work for you appreciate more? So a government
hand-out education is the answer?

Leave it to Conservatives to try and kill any decent legislation
designed to better control gun sales. How many Columbines do we need
before the jackasses realize that somethings wrong?
Hey Einstein, guns are not the problem. If law-abiding citizens give
up their constitutional right to own guns, the black market will still
supply them to guess who....? Criminals Guns responsible for the Columbine
tragedy? What about plumbing supplies? There were what, around 100
homemade bombs? And cars? Theyre evil too since they were used to
transport the guns and bombs and people. And fast food is evil too...
no doubt those boys ate a burger or two at some point...videotape Thats
gotta be outlawed as well....those boys used video tape and a video
camera....OK, ALL guns, cars, fast food, video equipment are banned
Wait AIR They were breathing AIR OK, now air is hereby illegal.

Einstein--blaming guns on Columbine is like blaming spoons for Rosie
ODonnell being fat. How many spoons are in your house? Thatll be
10-15 years hard labor for each instrument of human demise.

Leave it to Conservatives with shoddy pasts to try and run out of
office a President who erred and apologized for it.
Actually, he didnt err, he phucked up. Learn the difference. He also
LIED to America. Only when he had dug a hole so far down he couldnt
ever get out, did he admit. Not a very valid apology in most of
Americas eyes. Or the worlds eyes for that matter. Pathetic fits
well here. The President is supposed to be the most powerful force in
the free world, and if Clinton is it, were all in trouble. And _that_
is a compliment

Where are all the so called great Christian values of forgiveness and
understanding perpetrated by the family values crowd?

Christian values such as forgiveness are wonderful and amazing traits.
But I dont believe for one minute that they are to be interpreted in
such a way as to make Christians sitting ducks for being taken advantage
of. Turn the other cheek doesnt mean sit there and get your ass
kicked, and do nothing about it. Moreover, if you are speaking about
forgiveness for Clintons dick usage, then forgiveness is one thing.
Lack of future trust is another. He is forgiven, but I dont trust him.
He has proven to the world that he can and will lie as easily as most
folks will blink an eye.

Youre lousy hypocrites who are living in the America of the Wild
Wild West in the 1800s and have insight and values and understanding
where you sit.
Hmmm...sounds like youre describing your point of view....

PS It is my right to preserve my identity. I do not owe that to you.
I know that upsets you, and your world is intolerant of it, but with
that, it is a Good Thing _you_ are not President.

How long is your drivers license good for. Were you an expert when you
got the first one?

: That would be fine -- after that period, have them come back and take
: a more challanging exam to see how much they actually learned.

In affect it's already being done. It's called upgrading.

: Good idea, Mark.

You seem to be forgetting that to get a license you have to meet a set of
(minumum) requirements. Once you do that, there are no other requirements
(other than obeying the rules) that you have to meet or further learning
to do. In fact you could just be inactive and never even use the license.

Sorry Doc, your confusing conservatism with Jerry Falwell and
the "religious right". A true conservative believes in the constution
of the United States. Believes that a woman has a right to choose,
believes in rights for its citizens as well as for the criminals out
there. Believes in the right to own and bear guns, believes in a
government that is for the people by the people, and above all a
government that is ANSERABLE to the people.

3029. KV4FZ & Justice

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-28 00:00:00 UTC
From: AllAmericn@webtv.net
Message-ID: <10860-390A0745-79@storefull-244.iap.bryant.webtv.net>
Source record: 112462

Should Herb Schoenbohm, KV4FZ suffer some penalty, because we think he must have done something wrong? There are many who say "yes." This report tells why 1) he should be exonerated of the remaining criminal count, and 2) his ham radio license should be restored.

The story is unquestionably ham radio related.
The FCC stepped in after he was convicted of of the felony count, "possession of a counterfeit access device with intent to defraud." FCC rules specify the agency need not license a convicted felon; however, the provision is seldom invoked.

In Herb's case, the felony conviction opened the door to FCC jurisdiction. What the judge heard at the administrative hearing, rather than the felony conviction itself, was dispositive of dooming Herb's ham license. They held, he had not been candid.

I do not question the Commission's assessment. But the entire train of events culminating in that hearing was unfair.

Not at issue is Herb's culpability of committing an alleged misdemeanor against Call's. Had he been so charged, he likely would have been convicted without much contention. However, Herb was charged with three counts of felony, a horse of a different color. We cannot be convicted under our system of that which we are not charged.

At his criminal trial, the prosecution presented a list of his alleged illegal calls. Trouble was, after the trial the defense discovered the list was fabricated. The defense then moved successfully for reversal. Two of the three counts fell.

"Possession of a counterfeit access device with intent to defraud" is the specific count left standing. It too should fall, because when the printout was discredited, any such conceivable device dropped from the case. (The Miller audio tape contained telephone numbers, not access codes.)

The two counts which the judge reversed were more obvious. Both were grounded in a jurisdictional minimum of $1000. Since recipients on the bogus list testified by Affidavit that they didn't know Herb, hadn't heard from him yet had other business in the Virgin Islands, the case against Herb no longer came up to the jurisdictional amount. So the judge reversed those counts, upbraiding the prosecution.

Since the appearance of some guilt remained, the court wouldn't tinker with the counterfeit access count. The argument about no identifiable counterfeit access device was never made adequately.

Travelling the judicial road, causes of action do become foreclosed. But not necessarily all. Clever lawyers come up with clever causes all the time, and exoneration of the remaining criminal charge is still possible.

Though he had no obligation to testify in his criminal case, he was forced to the stand by the prosecution's tactical advantage with the bogus printout. Herb found himself in a position where he had left everything up to his lawyer. In turn, his lawyer, who expected a quick acquittal, argued everything in Herb's favor.

Counsel argued as fact that Herb had no computer expertise, expecting his client would never take the stand to testify contrarily. When Herb testified, he found himself in the untenable position of reconciling his lawyer's argument with the truth.

That's when his downhill journey began.

Because Herb is still pursuing certain remedies on the criminal side to exonerate himself, he could hardly come clean with the FCC. Essentially, the Commission's administrative hearing was an unintended invasion of his Consitutional rights. If he testified candidly before the FCC, he would have doomed his appellate rights on the criminal side. By not testifying candidly to the Commission, he doomed his ham license.

To the extent he's misbehaved, can Herb say he's sorry? Can our Government take remedial steps, recognizing the Catch22 into which he was thrust? To be continued ...

Bob Sherin, W4ASX
Miami, Florida

That is not true, either. The INS can and do arrest suspected
illegal aliens. How do you think they round them up anyways?
Ask them," pretty please, would you step into this van over
here?" Baldertdash.

> As for the weapons...CBS news as well as NBC and ABC have been

They know this because there were three separate searches of the
house.
As admitted by the authorities who conducted them, the last of
which
took place on the day before the incursion.

The INS was enjoined by the 11th district court of appeals from
taking action. The status of Elian was the very issue in question.
Therefore INS action to arrest Elian as an illegal alien was bogus.
Further the court SPECIFICALLY stated that Elian was NOT to be taken
from the family until the matter had been ajudicated. Not by INS,
not by Justice, not by the father, his agents or assigns. By the
court's order, Elian was to be left with the family until the
hearing on May 11th. Any warrants issued in the matter were,
therefore, in contempt of court, and bogus.

Apparently. The neighbor's house, also had been searched.

> > At the time of the incursion, all media had been taking the pool
> > feed from the site for some time, and were reporting about the
> > house, family and neighbors, in large part, erroneously.
>
> "erroneously? How so?

Simple, erroneously, as in 'not true'. Reports are surfacing that
what has been reported through 'official' sources as described is
not true. Person after person, eyewitnesses to the scene, have come
forward, to deny the story as reported. The crowd was not violent,
and the stories about the family are manufactured. Those who were
there. Including the cameraman beaten by INS agents, and local
police officials. These eyewitnesses are not being heard by
'offical'sources. But teh truth is coming out nonetheless, is slow
trickles.
>
> [snip peripheral nonsense]

Interesting use of labels. Labels, like taxes, are most
effectively used to destroy. You've learned well, Grasshopper.

I did. And they conflict with the stories that are surfacing from
parties directly involved, including Ms Reno's 30 year friend, who
handled the negotiations with the family, and judges offering
opinions in teh case.
>
> [snip paranoia]

janssenjq,

As a fellow ham, albeit one who made a significant contribution to Herb's cause, I surely have the right to publicly voice a good-faith opinion.

The evidence showed, Herb did in fact toy with Calls. FCC officials were there first outside, then inside the court room. Naturally, the Commission would want an explanation for what they witnessed.

While Herb is indeed not the big felon the prosecution portrayed, he could have saved his license, in my opinion, with a little humility. Experts in these type of cases know that an expression of de minimus remorse would have gone a long way--and still might--to remedy Herb's situation.

Witnessing the folly of the KV4FZ-type of blanket denial are the Watergate and Clinton matters, where minimal admissions and apologies would have remedied the situations before they got off the ground .

Look Peter, there is really only two sides to most debates - those for something and those opposed to it. And people on both sides are going to use whatever argument, whatever evidence, they have heard others, who are also on their side of the issue, use. That is normal in any debate.

However, even if people didn't hear anyone else say something, it should not really be surprising to hear similar arguments because most arguments really boil down to a few simple points. Lets give an example - the issue of whether Elain should have been returned to the father. Now, either you're going to be opposed to that (and millions of people, who you have never met, are going to agree with you), or you're in favor of it (and millions of others are going to agree with the people saying this).

Now the fact that millions of people agree with your position (either way), and many agree for the same reasons that you do, does not mean that you got together and conspired to present the same argument. It simply means that there are a lot of people in this world and many of those people are going to have similar arguments (no matter which side of the issue they are on).

So, the fact that these journalists have an opinion, and Castro also has a similar opinion, is not related. There is not great conspiracy here. Millions of people think Elian should be returned to his father and allowed to go home to Cuba. The fact that Castro thinks the same thing is not really an issue (the only ones who seem to care what he wants are those opposed to Elian's return, not those in favor of it).

> It raises the issue of credibility.
> And upon credibility, not doctrine or
> ideology, it is incumbent upon us as
> citizens in a nation Of the People,
> By the People, and For the People, to

> demand full and open accounting of the

> And to pick and choose among the
> stories and sources, to find where
> the truth is hidden.

Look, the only doctrine or ideology I see here is from those opposed to Elian's return to his father, and to Cuba. It is the same doctrine and ideology that fueled the cold war for five decades. Those in favor of the boys return are simply saying that this should not be an issue here - in other words, forget the cold war rheteric and let the boy go back where he belongs (the cold war should not come between a boy and his father).

So, try to wrap yourself up in the flag (or constitution, in this case) all you want. Most people are not falling for your cold-war rheteric this time.

One fellow mentioned the old toilet-paper-in-a-tree-in-the-woods trick. If you're walking through the woods and see a roll of toilet paper in a tree, don't look up, look for the trip wire or mine that the toilet paper is distracting you from. Seems the Elian story could be the toilet paper to distract us from the other under handed things that this administration is doing!

Just food for thought.

You notice there have been a couple of other incidents of killings by guns lately. Expect the Klinton administration to push through more "gun control" bills for the U.N. Shortly after the guns are taken most everyone will be believers -- in physical or mental leg-irons.

After you've studied, taken and passed the Extra test....what do you do now? You can't sit around on your asses like they do on 75 meters until you can't get out of your chair, any more, can you?

So, let's go after something new!

As a pubic service to all those Extras who think they know it all....I offer you the NEXT generation of license/test/certification! Get your CSSA or CSSE! NO CODE TEST, EITHER! Should be real easy!

Start taking the practice tests on:

http://www.secure-1.com/cert.asp

Then, sit back down at your ham rig and tell me how much 20 wpm on Morse from 1900 is in the importance of it all.

Actually it was Lenny, KC5???. He was a technician licensee, who decided to operate on 14.313. He then proceeded to (on the air, mind you) state he was NEVER going to learn cw. And the FCC couldn't stop him from playing on 20meters. Riley's rangers then popped him, told him to knock it off. He agreed and turned in his ticket. He then proceeded to play on the "free band", tear up his neighborhood and started frequenting 20 meters again. The rest is history.

toomanyradios,

As long as all remedies are not yet exhausted, these issues are ripe. To consider them otherwise is to deprive KV4FZ of his Constitutional rights.

To my knowledge, this is the first time that the criminal and administrative actions, taken together, have been shown to be intrinsically repugnant to the Constitution. Simply put, Herb cannot enjoy his Fifth and Sixth Amendments, U.S. Const., while expected to be fully candid in an administrative action. The 5th and 6th provide for Due Process and the right against self-incriminate.

Though this may be unimportant to you, it means everything to me--and many others, including KV4FZ and the FCC.

Bob Sherin, W4ASX

> If they are so 'well intentioned' they can EARN their additional privs just as I
> and millions of others have.

There are plenty of people who can EARN their privs in more ways than just learning CODE, without technical advances the fancy rigs that some of the higher classed hams use would not exist, that would leave them little to talk about on the radio (HI HI).

> I see no virtue in the lowering of standards, especially when done just to cater
> to selfserving and lazy whiners.

LOWERING ONLY ONE STANDARD, CODE SPEED. And who is whining, those who already took the code test!

If I upgrade, will I be banished to talk only on 14.313 or one of the other couple of freq's that everybody just has to talk on while the rest of the band is open, who is doing that, the no-code tech's and novices??

The rules have changed, you can't change them back, if you did not write in you are at fault also, stop your whining and use the bands (not just one freq) before they all get taken away!!

I spent 3 months working on a radio project with no help from the higher class guys (I belonged to 2 clubs), when I finished I put what they had done to shame, what does that say for them, they passed the higher class tests (even code) but got outdone by a tech plus, sometimes standards don't help!!

>just happen to be a good CW copier for 40 years!

But you said that "no one" could copy it. You were wrong about that,
so you're no doubt wrong about everything else you've accused Dave
of.

>Now for Moonwalker....Dave..KE6HN..What is the purpose of the CW 'AD'?

A URL which points readers to a discussion site is not a commercial
advertisement and thus, to answer your earlier question, no law
is being broken. Any forty-year ham would know the rules inside and
out.

>Since that URL is inaccesible due to a needed password now.??????

It's clear that the source of your present and earlier hostilities
is the fact that you've been locked out of that site. What did you
do that they kicked you off? Maybe if you apologize and stop the
annonymous name-calling, they'll give you the new password.

>Further..There are NO control Ops on 147.435 Mhz. IN L.A., so why are
>you trying to come across as one.???

He programs the controller. Apparently he welds more control than you.
It's easy to see that you're also bothered by that fact. Maybe you
could ask Dave to teach you some programming and volunteer to assist
him. But first you have to stop the anonymous name-calling.

Say, is there a web site which contains a live audio feed of the
147.435 repeater?

Nope. They expressly refused to do anything WRT custody. All
they said was that Elian had to remain in the U.S. Do you think
that the court contemplated that the _Miami_ clan was going
to spirit him off to Cuba?

> . . . The status of Elian was the very issue in question.
> Therefore INS action to arrest Elian as an illegal alien was bogus.

Nope. The INS often holds people, even in _jails_, pending their
hearings.

> Further the court SPECIFICALLY stated that Elian was NOT to be taken
> from the family until the matter had been ajudicated. . . .

Utter bovine scat. I've read the whole decision, and there was
nothing such as that in it.

Do you just make up facts as you go?

FWIW, the court, since the hearing has refused to even order
that the Miami clan be allowed to see Elian. If what you say
is true above, they would have ordered the boy _returned_.
That they did not. You're just _full_ of it. . . .

[snip further nonsense]

janssequ,

Of course, everything here on the Newsgroup has a shelf life. When it is dead, it does fade away. But for me, not before the thread is thoroughly explored.

I wasn't the one who voluntarily revealed the $300 episode; I was questioned here on the NG, forced to open up on the subject. My posts about Herb's legal predicament have nothing to do with the $300, which I have reason to believe will be remedied.

My posts deal with the aftermath of a criminal case where the prosecution threw Herb's case into chaos by the introduction of fabricated evidence. That chaos extended into his administrative hearing before the FCC, putting his license at risk.

I'm not demanding anything. The story drives me as it did at trial; doing journalism that makes a difference is my motive.

Please, my friend, comprehend the difference between 1) the strategy of confession and avoidance and 2) an attempt to elevate Herb's case by adding famous company. The cases are cited because they are ones within the purview of everyone's knowledge. (Or would you rather I cite the remote Nova v. Askew et al.?)

The point is: a minimal confession at the threshold can save multitudes of grief later--and ham licenses too.

Now comes the problem of what Herb should do, an enigma. I am now aware any ham who has a criminal case followed by an administrative FCC hearing is open to invasion of his 5th and 6th Amendment rights. To be candid with the Commission can very well mean testifying against yourself for purposes of the criminal process.

I hope you can see the deeper meaning here, because this is not a matter of crime and punishment. It is a matter of being railroaded by prosecutorial misconduct, then having the FCC invoke its power when valuable Constitutional rights stand between you and and the fate of your criminal case.

Could it be that HeROS was formed in reaction to Lambda, whose announcement also appears in the program:

QUOTE

Lambda Amateur Radio Club
Join us at our hospitality suite, Friday at 4:00 PM. Look for the signs in the Ramada Inn lobby, Ramada Inn, 4079 Little York Road, Dayton, OH.

Established in 1975, LARC is the only open and visible public service-oriented club for gay and lesbian hams and their friends. We are also the only gay club that is affiliated with the ARRL. Membership is open to all. If you have questions, call Doug Braun, KB8TGT, at the Ramada Inn: 937-890-9500.

END QUOTE

Compare Lambda's notice to the HeROS notice:

QUOTE

The Heterosexual Radio Operator's Society (HeROS)
The Heterosexual Radio Operator's Society will meet Friday at 7 PM at Ryan's Family Restaurant, 4111 Little York Rd in Dayton, OH.

HeROS is a public-service-oriented club which proudly affirms the straight majority status of the of it's members. HeROS works publicly and visibly for the benefit of all amateurs by promoting actions with opposite genders, and good will in ham radio.

END QUOTE

Just a thought.

>
> [snip paranoia]
>

You know, you raise a really good point here. The truth isn't about ideology. The truth doesn't take sides. It simply exists. And it comes from many sources in a dispute.

But when Dan Rather, Peter Jennings, and Tom Brokaw are all saying the same things in an issue like this...using exactly the same language, the same words and phrases,...and they are the same words and phrases coming out of official sources in Cuba, notably Cuban media, the issue of credibility comes into question. It is not the business of journalism to take sides. It is not the business of journalism to decide for us what is the truth and then report what they decide. It is the business of journalism to report what is being said, to report what is taking place,-- on both sides,--and let the truth surface.

I have to seriously question the credibility of sources when Dan Rather, Peter Jennings, Tom Brokaw, Bill Clinton, and Greg Craig all in agreement with Fidel Castro. And an attorney in this dispute, Mr Craig, pulls rank on the Attorney General of the United States, and the 'watchdog' media fails to report that detail.

Yes, you must pick and choose which sources to believe. Not on the basis of ideology, but on the basis of credibility. And what's being reported in this matter, suffers severely in this area, in that Journalism isn't asking WHO, WHAT, WHEN, WHERE, AND HOW, but is simply parroting what has all the earmarks of the Party Line.

If Journalism wants to be believed in this matter, where are the in depth exposes? Where are the questions? Why isn't Journalism RABID over the fact that, unlike wiht the family in Miami, when they had open access to Elian and his doings, and his relationship with the family at will, they are excluded from the 'reunion', and only getting information through Mr Craig, an attorney in the dispute who

speaks for the father, and Fidel Castro? Where is the outrage that the American Press hasn't the same open access to Elian and his relationship with his father? Where is that hunting dog tenacity over the issue of the faked reunion photograph?

Nowhere to be found.

When has the American Press ever been so docile?

And why?

It raises the issue of credibility. And upon credibility, not doctrine or ideology, it is incumbent upon us as citizens in a nation Of the People, By the People, and For the People, to demand full and open accounting of the facts, so that the truth may surface. And to pick and choose among the stories and sources, to find where the truth is hidden.

That is not happening here.

And that's not paranoia...it's the truth.

Hi,

I've inherited an old working original radio receiver, a Grundig Prima_Boy Luxus LW208, I can provide serial number if it helps. I guess it has 40 years or more. It's made in Germany.

I got no intention to sell it, though I'd like to know a little bit about this model, when was it built, if it's really worth and if so, how much could it be.

Do you know any qualified collector-guru I should address to get an opinion?

It's sound is really wonderful.

Thanks.

news:8ebtan$8om$1@slb6.atl.mindspring.net...
> How can a Mariana Guacamolean know so much about what went on with KV4FZ?

I read QST like anybody else. I've never talked to him at any length but
it's also impossible to not admire his signal from any of the 5 continents
on which
I have been posted over the past 10 years. It's really unparalleled
in the Western Hemisphere. I'm sorry to say that I have never heard your
signal.
Lots of people know about Herb. You for one talk about him ALL the time
and there's no such thing as bad press.

> Do me a favor and go bust open a coconut on your head as if you're not
doing
> it already.
Don't question Bob Sherin. He was AT TRIAL.

Know that. So? Isn't he the one who pointed out the irregularities?
Apparently, it was hardly a cut and dry process but that didn't keep you
from calling Herb a
"guilty s.o.b.". Can't air personal conflicts on the bands so air them here
I guess.

He went at his own
> expense to help the felon and what did Herbert do? Sold him a linear that
> was stored in the Caribbean Sea. Stole $300 from Mr. Sherin.

So this is really about an amplifier? Personal (and unbelievably petty)
conflict.

Janssen, do
> everyone a favor and go post on a Japanese rec. radio forum and leave us
> great Yankees alone.

Like Herb or not, his accomplishments in Ham Radio are significant. Anybody
who could do what he did on the low bands from the noisy Caribbean has great
operating and
technical skill. His 20M signal to NA and most of EU set a standard for
consistency, clarity and strength. He never
lost much time rebuilding his station following devastating Hurricanes,
another
true accomplishment. I always wished that Herb would spend his on air time
(and in this NG) telling
the rest of us how he did it. (Then again you might have similar
accomplishments

in which case please tell us because that's why we are here..We all know how to point and click so we don't need you to tell us about Elian, Clinton etc). Instead, Herb let his enthusiasm
for his issues get the best of him, made a lot of enemies and jeopardized his ticket.
(That could never happen to you could it?)

To us that pass-by or try to enjoy Usenet, you and Herb are two of a kind...except that I can't find your call in ON4UN's low band book nor have I ever heard your signal or seen
your call in QST when it wasn't that you were receiving some kind of registered mail or
worked you when I was in a rare country.

Neither you, or I or Mr. Sherin or anybody else save maybe for the phone company has any contrition due them from Herb or any right to demand such.

Sayonara you turkey.

>> since been admitted by Reno and Holder that there were three
>> separate searches of the house by federal and local authorities,
>> including INS, that failed to find any weapons in the house. The
>> house was watched, and the house was known to be weapon free at the
>> time of the incursion. As was the neighbor's house.

It's not the house itself but the people in and around the house:

Washington Post: As many as 25 potentially armed individuals, many known to have concealed weapons permits and criminal records, around the Gonzalez house had been identified. All those individuals were involved in a security system designated to prevent Elian's removal from his relatives. The system included a five-man contingent of bodyguards around the family itself, one of whom had been seen carrying a gun inside the home.

>got the first one?

But the "learner's permit" (Mark's suggestion) comes before the DL.
After the six months of utilizing the permit, the examiner determines
if you're expert enough to be trusted on the road with full driving
privileges.

>: That would be fine -- after that period, have them come back and take
>: a more challanging exam to see how much they actually learned.

>In affect it's already being done. It's called upgrading.

That's voluntary. In regards to licensing of drivers, it's mandatory
that you "upgrade" from learner's permit to DL, or else you don't drive.

>You seem to be forgetting that to get a license you have to meet a set of
>(minumum) requirements.

We're discussing a learner's permit, not a license.

Jeff

Apparently a group of ex-"14.313'ers" who moved to 14.275
versus a group on 14.273 who like to run
high power and dirty amplifiers, (they claim that
they have been on 14.273 since Marconi discovered
radio....)

Appears to be your classic ham radio "turf-war" squabble
warming up to a slow then full-rolling boil. Dump in a pound
of spaghetti and make dinner....

Listen in on 14.273-275 USB during daylite USA hours.

Such a scheme seems rather pointless unless you also periodically test licenced Amateurs to see that they have retained that standard. Why set a standard if you don't care if it is maintained?

This is central weakness of the licence as a measure of competence. It is, perhaps, relevant for the duration of the exam, but for the next 30~40 years, it is a meaningless piece of paper when trying to determine the competence of the holder. If you don't care if a vetran Amateur could not currently pass the licence requriements, why require the neophyte to do so?

Amateur Radio already has a "Learner's Permit". Is is operating with a licenced Amateur - exactly in the same way a learner driver is accompanied by a appropriately licenced person (minus the learner's permit, of course).

This is the weakest link in the existing licence scheme because it does not test the ONLY thing which is likely to disrupt the bands - the on-air manners of the Amateur. This is obvious from the bands. Technical ingorance is vastly overshadowed by plain bad manners amd pig-headedness as the main cause of disruption on the bands.

The question of the technical standard of Amateurs is, in my view, being handled backwards. If you want to lift the knowledge level, concentrate on the long term Amateurs - they are a much higher percentage of the Amateur population and on _average_ they have a lower techncial level that any Amateur who has just passed the licence (no matter what it's level is). Mind you, many new Amateurs reach the same level as the average old-timer pretty quickly. ;-) BTW, I include myself in the old-timer category.

Mark.

New on 3950.net (http://www.3950.net):

1. A new url for the FRG9600 3950 Jammers Page

2. A new alternate url for 3950.net, in case of server or network difficulties

3. Links to two unintentionally amusing web sites published by two well-known and aggressive QRMers of 3950

4. An hilarious new cartoon capturing the pure lunacy of WA9KJI

Have fun!

With all good wishes,

Kevin, WB4AIO.

It's not likely that we are going to KILL someone with ham radio. So we
don't have such restrictive license classes :) But I think one could take
the "full privilege" driving test as the first test.

: >: That would be fine -- after that period, have them come back and take

: >In affect it's already being done. It's called upgrading.

: That's voluntary. In regards to licensing of drivers, it's mandatory
: that you "upgrade" from learner's permit to DL, or else you don't drive.

See above about KILLING people/things. There is a public safety issue
involved with driving.

: >You seem to be forgetting that to get a license you have to meet a set of
: >(minumum) requirements.

: We're discussing a learner's permit, not a license.

I'll have to admitt I haven't read all of Marks suggestion (sorry Mark,
it's a real eye strain since you don't hav' a speel cihkerer).

Well, let me saaayy this a'but thaaat ..... ham radio doesn't -have- a
"learner's *permit*" we jump right to the license stage. Of course it is
recognized that one particular class is the "entry (learner)" class. :)

That's exactly the point. Journalists do not have opinions in the
matter they report. The report. The coincidences, you correctly
point out, are not conclusive of conspiracy. And it is not my
intention to state that they are. However, even in similar
circumstances, three distinct reporters express their witness three

distinct ways. This isn't happening here. Rather, Brokaw and
Jennings are using the same language, in the same ways. That
suggests that isn't individual information gathering taking place.
Again, not conclusive, but if it doesn't raise suspicions, there is
a problem with the willingness of a free people to pursue the truth.

Not cold war rhetoric...questions. Questions that have not been
asked in this matter as they should if the truth is ever an issue.

Strom why the stupidity? Why do you continue to instigate? Your like an old Japanese soldier lost in the jungle, not knowing the war is over he continues to fight. Most of the problems (99%) have been resolved or stopped on 3950. It has gotten back to some level of normalcy, and here you are starting your usual brand of instigation, with people who are not creating problems. Your a loser Strom, and bad for amateur radio.

And I see that your views about conservatism are really "broad" and "encompassing."

> A Liberal looks to expand programs while
> Conservatives restrict.

Even if the program makes no sense and is actually harmful to our society?

> A Liberal is tolerant of all peoples while
> a Conservative lives in his own church and
> bars anyone different from entering.

What he's actually saying is that, "a Liberal is tolerant" to everyone except conservatives, anyone who agrees with conservatives, anyone who does no agree with him, or anyone who disagrees with anything he likes.

> In 2000 an American Liberal recognizes
> the need for better gun control while
> a Conservative is in the pocket of NRA
> extremists who thrive on fostering
> murder and mayhem in the States.

Washington (DC) is the violence capital of the world, and has more Democrats, based on percentage of population, than any other city in the United States (and Washington also has the strongest anti-gun laws).

Of course, that really should not surprise anyone. If I were a criminal, I'd certainly support the liberal cause. For example, I would not want to run into a gun when I break into a house at night. And those liberals who want to ban guns will insure this does not happen. And, if I'm ever caught (not likely if liberals keep distracting the police with claims of brutality), those same liberals will insure I get a really light prison sentence. Heck, maybe I'll get no prison time if I can convince them I'm a poor victim of society or the police who arrested me are racist (oh shoot, I'm white - that ploy only works for blacks).

> A Conservative is a patsy for the
> intolerant religious right in this
> nation who want to push their
> stupid and bigoted agenda down
> everyones' throats.

And the liberal is tolerant of everyone except those who believe in religion (and, as stated earlier, anyone else who disagrees with anything the liberal likes). And "bigoted" is a word used most often by liberals to describe others, when it really best describes them.

> Conservatives want to control a
> woman's reproductive system; they
> want to ban abortion yet provide
> no answer as to what we do with
> millions of unwanted infants.

And liberal men, like possibly the writer of the paragraph above, just want to control a piece of pussy, even for a moment. And they will they will do, or say, anything to achieve that. So, if a woman wants to kill a baby, that is just find with most liberal men as long as they get some. After all, they don't have what it takes (moral courage or integrity) to attract women any other way.

3113. N0VFP: My retirement from Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-29 00:00:00 UTC
From: n0vfp@aol.comnospam
Message-ID: <20000429022449.22334.00000571@ng-md1.aol.com>
Source record: 112355

Yes folks, I have decided to announce my retirement. Some of you are glad to hear this I'm sure. I have enjoyed the many years of on the bands. I am moving on to better things in my life and need to put some things behind. I have sold most of my ham gear and will keep a few SW radios around. I will still be active as a "lowly SWL" but so be it. I need some time to reflect on my life. I have sincerely awakened to some new things in life.

Next Thursday, I have to a root canal done by a dentist in town and I have been putting some of my affairs in order. I am hoping this will be a turning point in my life. I met this wonderful woman at a singles group in my area and she happens to work at the dentist I'm going to.

I am also submitting my retirement from the Better Amatuer Radio Federation. I just need time to reflect.

I am also stepping down as a spokesperson for Brother Stair and David J. Smith. They can premote themselves.

See ya'll in the logbook down the road..... .

Brother Lloyd.
